Spelter stocks are very low and spot spelter in Canada has almost all disappeared. The continued high price of spelter has again been felt and galvanized sheets, galvanized plates and sheet zinc have advanced in price this week. Another general advance in galvanized wares is expected before long. The continued high price of copper has forced up the price of copper sheets, rivets and bars. An advance in copper wares is predicted for the near future. Tin is unchanged from last week and is in good demand. White lead is steady and unchanged. Antimony has advanced again this week and the spot market is very strong. Antimony has reached the highest price on record and little or no antimony is being offered for future deliveries. The American Metal Market under date of May 4, refers to the New York market as follows:

"We can report sales of Chinese and Japanese antimony for prompt delivery at 33c per pound, duty paid, and there is nothing offering in this market to-day at under 34c. Buyers have raised their bids on futures to the equivalent of 32½c duty paid for July, August and September deliveries, but no futures whatever are being offered. Bids have been cabled to the East, but the answers come back that there is nothing for sale at present for any shipment. Dealers and importers do not know what the exact situation is in the East and are much puzzled at the refusal of the Chinese and Japanese to sell at the fancy prices that are now being bid. There seems to be something up, but what it is, they do not know. The strength of the situation is so plain, however, that no one can be tempted to sell the metal short, although the price is nearly 500% higher than it was before the war broke out."

A London, England report states:

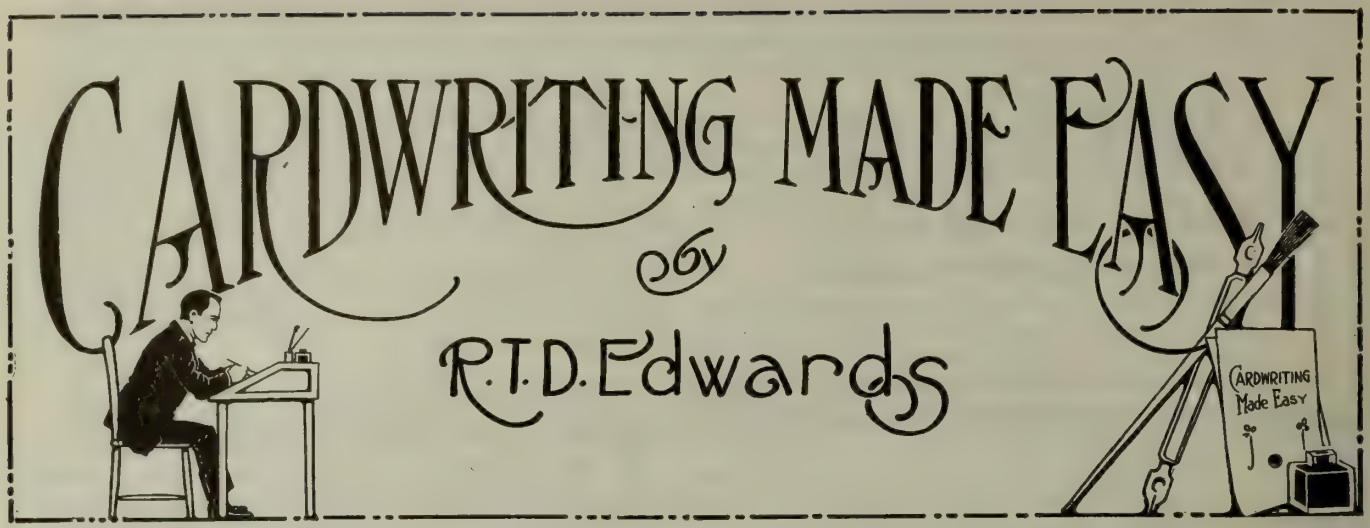
"The tone is as strong as ever, and English makers are not willing to consider anything below about £88 a ton for regulus, which price they have been able to obtain on several occasions. There is a genuine dearth of material, both in the finished and raw states, and the chances are strongly in favor of prices rising to higher figures yet. It is very far from easy to obtain crude, and next to impossible to buy foreign regulus, for all supplies available have long ago been taken up by Russia."

Kept Above the Billion Mark

THE trade returns for Canada for the year ending March 31, 1915, contain strong grounds for confidence in conditions. Canada is still a Billion-Dollar Country by a margin of $78,173,240. The decline from the total of $1,112,562,107 for the previous year is very slight under the economic conditions that ruled for eight months of the twelve.

Imports for the year amounted to $587,364,363 and domestic exports to $409,419,500. In 1914 the imports were $633,564,000 and the domestic exports $431,589,658.

The most encouraging aspect is the improvement shown in the last month, marking a movement back to normal and beyond. The imports declined from $54,520,229 in 1914 to $40,858,179 this March, but the exports increased from $26,701,026 to $45,118,922. This increase was not due to any one line of temporary activity. Manufactured goods represented $15,600,790, an increase from $6,239,290; agriculture rose from $6,512,546 to $12,438,145, and animals and products from $3,202,060 to $5,471,249.



Thus it will be seen that even if orders for shrapnel, and other ammunition be counted on as only certain for a brief period, there is still the doubling in agriculture, a source of income that is certain to be retained to a great extent this year. The other two sources though scarcely as legitimate at this time in an estimate of our assets will continue to be responsible for the distribution of tens of millions of dollars to offset to a considerable degree the shrinkage in ordinary avenues of production and export.

Uniform Half-holidays

ALREADY some towns are observing the weekly half-holiday. It appears to be taking hold even earlier this year than it has in past years.

Hardware and Metal has one suggestion to make in this connection. A uniform date should be selected for the half-holiday wherever it is observed. Up to the present the practice has been for the stores in the various cities and towns to select their dates without regard to what is being done in other places. The result is that the dates selected vary. In one place the stores will close on Wednesday, while in a town a few miles away, Thursday will be selected. Over in the next country they may be observing Friday or Tuesday. In consequence, the traveling man's operations become more or less of a gamble. He is never quite sure when he strikes a town whether he will find anyone around or not.

Such confusion is not desirable, nor is it necessary. By the selection of a uniform date early in the season, all trouble could be avoided. Wednesday is probably the day most commonly selected. Why not make it general the country over?

LESSON NO. 5.

AT the outset I wish to impress upon followers of this course the utmost importance of mastering last month's lesson before proceeding with this one. Have you secured your brushes and proper materials as advised to do the work? If you have not then you are just one month behind. I would strongly urge you to hurry. Don't think that because these lessons are free, you can let one slip by and start in on the next. This can be done in a way, but it is not advisable. If you do this you are losing an important part of some alphabet or figure work which links one lesson to another.

In other words if you wish to make a complete success of this course, the lessons should be treated as if you were paying a high price for them. Your brushes should be of the highest quality sable. The camel hair variety is of no use for water color work. Be sure you get an over-abundance of supplies and do not get tools not advised in these lessons. There are many agents traveling from town to town with devices for making show cards quickly, the manipulation of which need no experience. My advice is keep your hand on your money. You may have been "stung" already but this is just a tip for the future.

See Figure 1 of last month's article for illustration of brushes.

Chart 5.

In the chart shown this month we have a continuation of last month's brush stroke square face lettering. These letters go hand in hand with the figures of that issue.

Each stroke is just one sweep of the brush and must be made with a free arm movement. There are many old-fashioned card writers who work with their right hand resting on their elbow, but this method has long been discarded by modern card writers, and should not be used.

There is one thing to be remembered while studying card writing, and that is not to lay too much stress on accuracy. The main thing is to work for effect. Try to keep your cards from the "set" appearance given by type. Allow them a free and easy appearance. Remember that your work is not going to be criticized as a work of art but for its selling and trade drawing value.

You will note in a good many of my illustrations letters that are not perfect but have that free and easy show card appearance.

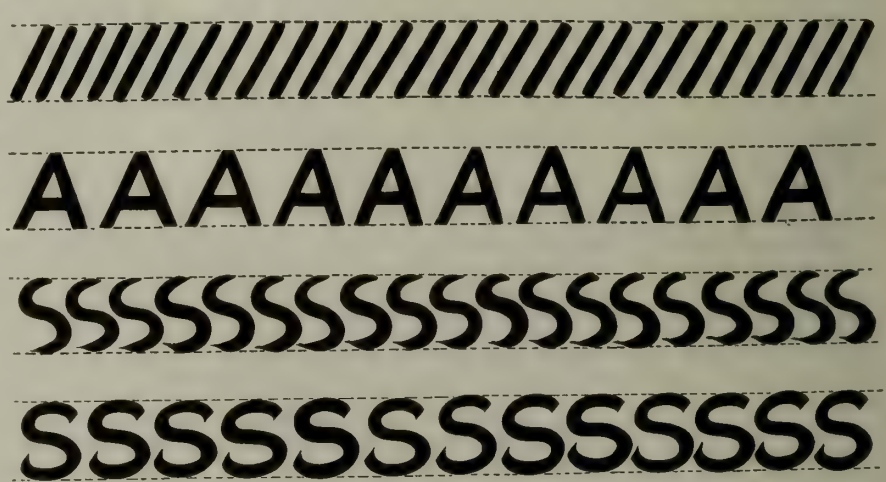
To begin practice lay out a half sheet of cardboard with guide lines one and one-half to two inches apart according to the size of the brush, you are using. Practise and re-practise many times the exercises and letters shown in the chart.

Fig. No. 2 illustrates the method for practice work.

Fig. No. 3 gives the correct position of the hand while holding the brush.

The Chart.

The "A" is a six stroke letter. Care should be taken to get both sides of the same slant. Note the position of stroke three.



Stroke three of "B" is placed above the centre of the letter. This is not a necessity but gives it a more show card appearance than if it were placed exactly between the two guide lines. Note where the small cross bars indicate the joins of the strokes.

The "C" is composed of two main strokes. They must be made quickly as should all oval letters or curved strokes. The "D" is made with four strokes. Note where stroke four joins two and three.

Stroke three in "E" and "F" is curved. This is not necessary but it takes away their plain appearance. It can also be made straight.

A whole half sheet of cardboard is not too much to waste on the exercises before the "G." This stroke is used in the construction of several letters on this chart. Stroke three of the "H" must be kept parallel with both guide lines. The "I" is simple, must be made absolutely at right angles with the guide lines. The "J" has two main strokes.

Stroke one must curve before it comes in contact with the lower guide line.

Practice Exercises
Fig. 2.

This illustration shows how to conduct the practice exercises.

How these letters are made is explained fully in this article.

The second stroke of the "K" is made by drawing the brush in either direction. This is just a matter of which ever comes easier to the student. I make it both ways myself.

The "L" has two main strokes. Slant

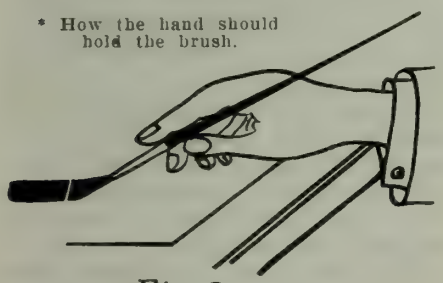


Fig. 3.

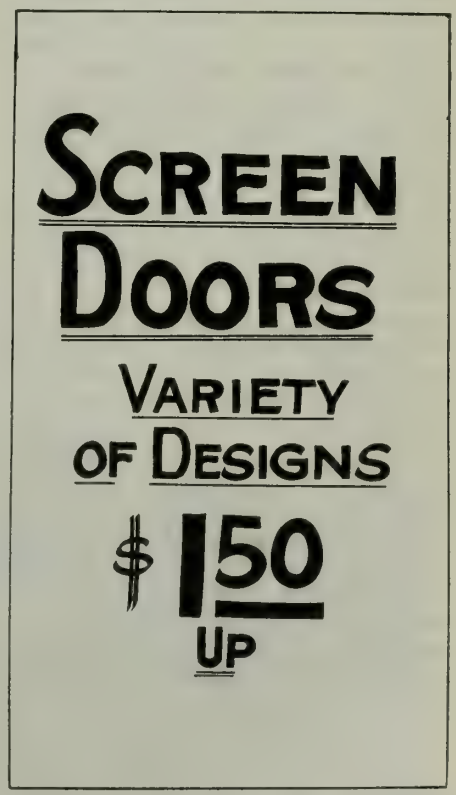
the end of stroke two as shown. Care should be taken to have the slant stroke of the "m" to join as nearly as possible in the centre of the two uprights on either sides.

Practise this letter many times. The strokes one and three should not be as far apart as the corresponding ones of the "m."

Only Two Strokes to the "O"

The "O" is the only two strokes letter in this alphabet. This letter cannot be practised too much. The strokes must be made quickly after they are begun. Note where the joins are. Remember that where the joins are shown it does not mean that the brush must stop abruptly at that point. In order to hide the joins it is necessary to overlap each stroke. The "P's" formation is similar to that of the "B." The difference is that the centre stroke comes exactly in the centre instead of nearer the top, as in the "B."

The tail of the "Q" is made with one stroke and with practice does not need a finishing stroke on the end. The rest of the letter is the same as the "O."



The "R" is the same formation as the "P" with stroke five added.

The "S" seems to give the beginner the most trouble of all. There are three main strokes in it. The top of the letter is slightly smaller than the bottom. This letter should be practised many times. The preceding exercise is very beneficial to the beginner. Stroke two of "T" should meet that of stroke one squarely in the centre.

The strokes one and two of the "U" should stop about an eighth of an inch above the lower guide line in order to let stroke three curve up at each end and still rest on the lower guide line. Stroke one and two of the "V" are similar to those of the "A," only reversed. The "W" is two "V's" put together. Both sides should be of the same angle. The two main strokes of the "X" should cross as near the centre as possible. Strokes one and two of the "Y" should meet stroke three at equal distance between the guide lines. The "Z" will need a lot of practice. The slant stroke should specially be gone over often.

This is only one of the many designs of "&" that are popular with card writers. The finishing strokes should not over-run the width of the main strokes. The arrows indicate the direction in which to draw the brush.

The accompanying finished cards illustrate this and last month's lesson.

Suggestion for Show Card Featuring Screen Doors.

Suggestion for Show Card to Accompany Garden Tool Display.

Cleanliness of the Show Card.

There are many little things which a beginner has to be careful of while learning to write cards, and most of them are found out by experience. Here is one which some think should be left to a person's own common sense; but I'm sure that a little time spent on it is not lost as it results in less work for you and less expense for the store in which you are employed. It is the cleanliness of the show card. It is often a great surprise to me, when I go into an exceedingly clean, well fitted store, to note show cards or price tickets soiled from finger marks or dust stained from long usage. The reason why these cards are left up has always been a mystery to me. There is just as much sense in a merchant or clerk wearing a dirty collar as there is of having a soiled ticket up for the public to see. These cards should be cleaned up if possible, and if that cannot be done, replaced with new ones. There are several kinds of rubber used for cleaning marks of cards but few if any will take a finger mark off completely owing to its oily nature. The best method for the removal of these disfigurements I know is by using dry pumice stone. This when rubbed on with a clean cheese cloth will remove the spots successfully. It should always be kept in a flat wooden or cardboard box that is easily gotten into.

Rub lightly until the spot is removed. By using this you can save many dollars' worth of tickets in a lifetime, and it makes the cards almost as good as new.

There are many other kinds of stains which mar the appearance of a show card and that cannot be removed successfully. This card should then be destroyed.

The Canadian Drill & Chuck Co., Ltd., capitalized at $20,000, head office Toronto, to manufacture and deal in all kinds of machinery and tools, etc.

POINTERS IN CARRYING AUTO ACCESSORIES.

(Continued from page 46.)

business available to warrant going into accessories. The man who can get gasoline customers into his store will soon find it easy to interest them in accessories. If you have an auto filling station, car owners will very often visit you. A Westmount merchant has a tray of goggles on his show-case, right close to the door, with a large ticket suggesting the need for protecting the eyes. This has brought business. He has other automobile goods displayed prominently in the store.

Then there is the question of tires. In the case of the city merchant, or one who is located within easy distance of a jobber, the question is easily answered. He can keep his stock down to a minimum, and never lose an order. Lariviere, Incorporated, Montreal, use a Ford car for displaying accessories, and they also use this machine to supply orders for tires and other goods.

The merchant in the country, while he is located some distance from the source of supply, is favored in that he does not have the competition to contend with such as is met by hardwaremen in the city. In most cases he will find it to his advantage to carry a stock, even though it is a limited one. One dealer finds that by taking an order for a tire one day, and wiring to his source of supply in a distant city immediately, he is able to secure delivery the following morning. His stock is small, and the profit he makes pays handsomely.

Sizes That Sell.

It often happens, however, that whereas a dealer can wait for any other accessory, he will not wait for a tire, even for half a day, and it is sometimes wise for the country dealer to carry some stock. The best selling sizes are 30 x 3½ (which is the size used by Fords), 32 x 3½, 33 x 4, 34 x 4, 35 x 4½, 36 x 4½, and 37 x 5. There are about thirty other sizes. Some of these sizes are interchangeable, and if the dealer is out of one, and the motorist must have a tire, he will probably take the other size. Where a dealer wishes to keep his stock down, and does little trade with large cars, he can do well by carrying the first four sizes, with corresponding tubes. To carry a big stock of tires is to tie up a lot of capital. To be in a position to buy intelligently, the country dealer should secure a list of car owners, and get the sizes of tires they use.

The stock of tubes should as a general rule be double that of tires. They sell twice as quickly, especially in the better grades. The sizes, of course, should correspond to the sizes of tires carried. The stock of chains should also be in the same ratio as the tires, i.e., the best selling sizes should be stocked.

Horns are good sellers. A stock of six or even less, will be ample, and should include hand-operated, motor driven, etc. A hand-operated horn sells for about $4, and the motor-driven for $12.00.

Your stock of spark plugs should consist of ½ inch standard, which is the best size, and a special Ford plug to sell at 75c or $1. The layout in this line should not exceed $25.

Repair Outfits Essential.

Repair outfits do not cost much, and should be kept on hand. A good stock should be secured for $6, and for another $4, a stock of blow-out patches can be carried. Tire gauges require to be pushed, and it is not difficult to show a man when he is buying tires that he should know the air pressure if he expects to preserve his tires. He cannot tell his pressure by looking at the tire, or by kicking it. A mistake of 15 or 20 lbs. would be detrimental. These retail for $1.25 or thereabouts.

Tool boxes are not good sellers nowadays. People like their running boards clear, and put their tools under the seat. One set of shock absorbers is sufficient for the small dealer. Master vibrators, for regulating coils move slowly; carry one in stock. Muffler cut outs are good sellers, and retail for about 1.50. Half a dozen is a good stock. Anti-rattlers sell for 50c, and a stock of ½ doz. each size, costing $6 is enough. These require talking up to sell.

The best way to sell radiators is to have one on your own Ford, and this is the only one necessary to carry in stock. If they are ordered, you can send for them. Tire holders, for holding spare tires on running board or at the rear, are good sellers. Six is sufficient. A stock of pumps is necessary, as there is always a call for them, also jacks, tire savers, etc. Running boards—would not

(Continued on page 65.)

Auto Accessories and the Jitney

Merchant Selling Auto Supplies Should Keep His Eye on the Jitney—Many Old Cars Pressed Into Service—Will the Jitney Stay With us?

THE jitney is a child of circumstances. The opportunist takes advantages of circumstances—and the children of circumstances. The business man is an opportunist in the literal sense. The moral of this definition is that the merchant who sells automobile supplies and accessories should keep his eye on the jitney. But we proceed apace.

Let us first introduce the jitney. It is the democratic name for that aristocratic vehicle of travel—the automobile. And being a democratic name it represents a democratic condition. In other words the dignified motor car, the plaything of the rich, has become the servant of the poor—for a consideration. That consideration is five cents in the plural.

The jitney like Young Lochinvar came out of the West. In name it represents the application of a term which means the smallest piece of money prevailing in many of the Pacific cities; in fact it represents the private car of any citizen with the inclination to carry the general public for hire in competition with the street railway systems.

Originating in San Francisco the innovation has swept east, and has spread to all parts of Canada and the United States. There are several definitions for this wave—popularity, business or circumstances are three of those mentioned. But we are not concerned with the reason, the theory or the explanation. The fact is that the jitney movement, first noted a few months ago in San Francisco, has spread like an epidemic until the motor car is serving the general public for a "jit" in all parts of the two countries, and there are hundreds of the caste-lowering automobiles seeking public patronage.

Jitneying, the latest American pastime, is practically without rules for either those who play it or play at it, if the distinction identifies to the reader the driver from the passenger. Any person with a car and the knowledge of driving it can enter into it as a carrier and any other person with five cents currency can take part as a carriee. However, the five-cent rule is one which makes the undertaking rather a questionable one from the profit-taking standpoint. Therefore, big business up to the present has passed over the proposition and the field is open to the individual who, with a car on his hands, may, for the time being, be satisfied to take a daily profit of comparatively small proportions to pay for his own services or those of a chauffeur and the use of his car.

But to come back to the part that is played in jitneying by the merchant with his automobile supplies and accessories. There are several factors which go to aid in the demand. The majority of the cars have seen service—it is doubtful if an investment in a new car would be found to be a paying one. The majority of them, too, need repairs and replacements to put them in condition to stand the campaign as a common carrier, and more of the like to keep operating; the loads are heavy and the passengers not inclined to be considerate of the expenses of the owner in their care of the vehicle.

The jitney may or may not stay with us; it may revolutionize street traffic or it may fade into posterity and pass with the bread lines. But for the time being it flourishes in many cities and while it does the demand for auto repairs and accessories must logically be increased. Tramway companies may worry about dividends, hack drivers about the price of oats, aldermen about franchises and the courts about the rights of the road but for the time being the man who sells or makes auto supplies—he should worry.

Hotel Door Key Tags.

L. E. Renault, Campbellton, N.B.—Please advise where we can procure tags suitable for hotel door keys.

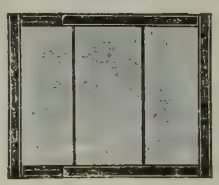
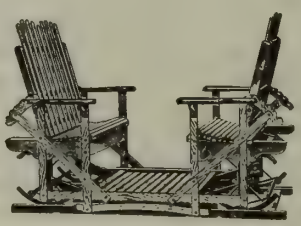
Pressure Gasoline Stoves.

Thos. Dodds & Son, Watford, Ont.—Could you please advise us where we could get pressure gasoline stoves?

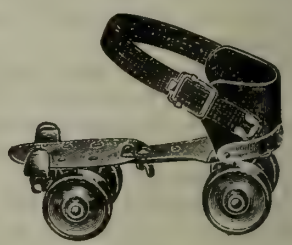
The James Stewart Mfg. Co., Ltd., Woodstock, Ont.; the Detroit Vapor Stove Co., Detroit, Mich.—Ed.



With the exception of four cars, all shown in the above picture were sold by a hardware merchant at Pense, Sask.



Addition to Electro Assortment



ON this page is shown an addition to Hardware and Metal's electro assortment for retail hardware dealers. With the cuts shown below the assortment now totals 219. These electros are supplied to hardwaremen at the small cost of fifteen cents each. Cash with order. Sheets showing the whole assortment will be mailed on request. Since the introduction of this service by Hardware and Metal a few months ago, orders have been received from all parts of Canada and many of the largest retail concerns in Canada are now using Hardware and Metal electros regularly in their newspaper and circular advertising. Many merchants in the small towns have also taken advantage of this service. Be sure and order by number.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—How Some Price-Cutters Secure Their Supply—Steel Trade in U.S.

How Some Price-Cutters Secure Their Supply.

From American Artisan.

IT is rather interesting to watch the campaign which is being carried on by the National Dry Goods Association against the use of coupons which are packed with the merchandise or "given" to the customer with the purchase, for although only in comparatively few cases has the merchandise coupon (packed with the merchandise) made much of a headway with the hardware manufacturers, there is little doubt that if the coupon people are successful in their efforts to stop the enactment of the bill sponsored by the National Dry Goods Association they will make a strong attack on manufacturers in other lines—which means that hardware dealers may have the "pleasure" of having coupons packed with saucepans, washing machines, stoves, cutlery, etc., and—what is far more important—of paying for these coupons.

There have for several years existed regular clearing houses for these coupons, with thousands of private "scalpers," who are buying up the various coupons on a cash basis.

A well known safety razor furnishes an excellent example of how this coupon proposition works out: The regular retail price of this safety razor is $5.00. It can be secured at one of the redemption stations for 250 coupons, each given with a 25 cent purchase. One hundred of these coupons are bought by the clearing houses for $1.10, thus making each coupon worth in cash 1 1/10 cents, so that the price at which the five dollar razor can be secured is $2.75, and it is stated on good authority that some of the cut price stores secure their supply of these razors in that way, thus securing them at a lower price than the manufacturer sells to the dealer.

So far as the value of merchandise coupons and trading stamps as trade stimulators is concerned it has been demonstrated time and time again that their efficiency is absolutely nil, because they simply add another feature of competition of which there is plenty and to spare.

Where before the advent of the trading stamp or premium coupon there was competition on quality, price and service—all of which are justifiable—when these new features were added, only another element of competition entered, without in any way adding anything to either quality, value or service.

The best policy for any retail hardware dealer to adopt with regard to trading stamps and premium coupons is to have nothing to do with the promoters of these pernicious schemes.

Steel Trade in U.S.

From New York Journal of Commerce.

APRIL was a more satisfactory month in the steel trade than early developments seemed to indicate, although railroad equipment orders were again light, and fabricated structural steel orders decreased 43 per cent. compared with the preceding month.

Buying of rolled and cast products for export, although not quite as heavy as in March, was most encouraging, and war orders closed during the last ten days mean further large buying of steel. April orders were probably 400,000 tons. One single interest took between 75,000 and 100,000 tons.

There was a slight decrease in output in shipments and in new orders during April by the largest interests, notwithstanding the large export trade, while the decrease with independent companies was more pronounced. The promise for the future, however, is causing a better sentiment and specifications against some domestic contracts are improving. The most important feature is the fact that higher prices are being obtained for both domestic and foreign shipment, which fact was reflected in the financial statement of the United States Steel Corporation for the month of March.

Outlook in West.

From the Financial Post.

THE Financial Post asked one of the representative implement men of Western Canada, whose operations are probably the largest in that territory, his opinion as to the outlook for business. He replied: "I believe that farmers have been thus far this year, and will be until crops are assured, very conservative in their purchases, which is exactly as it should be. While there is an entire absence of speculation in farm land, a considerable amount is changing hands—the purchasers being successful farmers with experience in that country. I make this observatoin from our own operations. We came into possession of quite a number of pieces of land in the way of protecting our second mortgage security. We have resold a large proportion of this to good farmers and at fair prices. It is true we have given long time, but the land is in this way again brought under cultivation and our security to a great extent protected. I do not believe that we will ever have another era of wild land speculation in Western Canada—at least not equal to that of 1911, but with anything like a fair crop this year, I look for normal business in 1916. The class of people that vacated the homesteads and other farms in that section last year have always done the same thing in a new country. The real farmers are staying with the land and will make good—at least our company are relying on that supposition, and are extending reasonable credit.

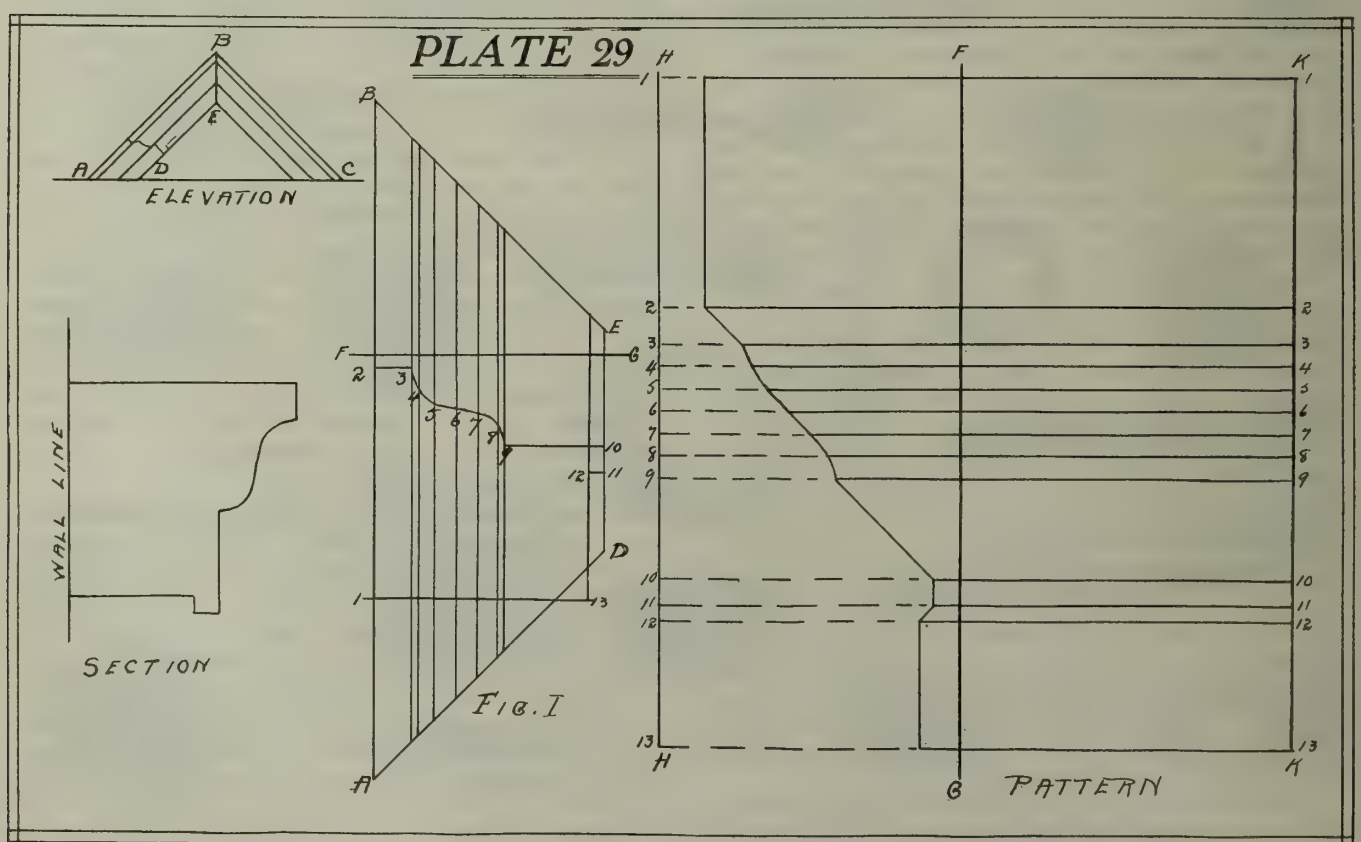
"I am sorry to say that I cannot report any improvement in the matter of collections. That is not surprising, however, in view of the unfavorable crop conditions of last year. There will be no improvement in collections until a profitable crop is marketed."

The facts we have given, coupled with the fact that the savings deposits in our banks are larger than they have ever been before, and that our banks have a larger amount of cash on hand in proportion to liabilities than at any time in their history, indicates that there is ground for anticipating more active business than has prevailed for the past few weeks."

Practical Course for Sheet Metal Workers

Article No. 29 of Series

By CHARLES SEIVERS



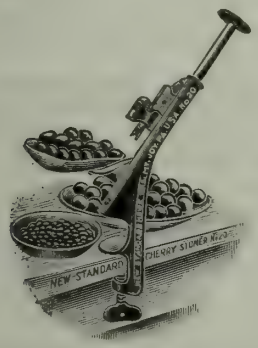
IN the problem described herewith is shown in elevation the view of a pediment A-B-C, resting on a flat surface as shown by A-C. The angle shown at B is a right angle, the mitres at A-P and B-E are also right angles, so that it is only required to develop one pattern for each mitre. Were the angle any greater or less, the mitre for each end would be different and would need to be developed separately.

At A-B-E-P, Fig. 1, are shown the two mitre lines B-E and A-D. Having drawn or laid out the angles, place or draw a section of the moulding in its proper position, seeing that the line on section marked wall line is at right angles to line A-B on elevation. It is necessary to place wall line of section at right angles to corresponding line A-B at Fig. 1.

Now divide the curved mouldings into a number of equal parts, and from each of these divisions and the angle at each straight member, draw lines parallel to A-B, until they intersect the mitre line B-E.

At right angles to A-B draw a line as shown at F-B, from which to measure from. Then draw two stretchout lines as seen at H-H and K-K, at right angles to H-H draw a line joining them as at H-K. On each of the two lines H-H and K-K, set off the spaces on section at Fig. 1, as shown by the numbers 1, 2, 3, 4, etc., and when set off, draw lines connecting 2-2, 3-3, etc. The pattern can be set off from either line H-H, or K-K, or any convenient line between. In this case a line between is used, F-G. Measure from line F-G at Fig. 1, to the mitre line B-F, on each of the lines drawn through the divisions in section, and set off from line F-G in pattern. Making sure that the distance on lines from the several points are placed on corresponding lines on pattern. When two points come on same line, as seen at 1 and 2, 10 and 11 and 12 and 13, the distance from measuring line to mitre line is the same for both points. When all have been set off, a line drawn through the points obtained will give pattern required.

The accompanying article is No. 29 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

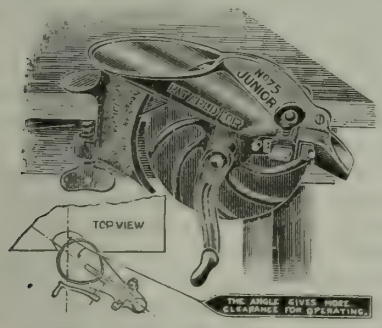


The Hydraulic Press Mfg. Co., Mount Gilead, Ohio, have just issued a booklet entitled "About Hydraulic Presses and Pumps." This booklet, which has been prepared as a souvenir of the company's exhibit at the Panama-Pacific Exhibition at San Francisco, reviews in a comprehensive manner the growth and scope of the organization. Other matter includes descriptions of a few representative designs of presses and pumps, all illustrated, and a list of catalogues which are ready for distribution. The booklet contains 16 pages and is gotten up in attractive style.

New Hardware Goods

Offered Canadian Hardwaremen

NEW STANDARD CHERRY STONERS



Three new cherry stoners are being offered to the Canadian hardware trade by the New Standard Hardware Works, Mount Joy, Penn.

No. 20 Cherry Stoner.

Cherry stoner No. 75, is designed especially for rapid and effective work. The patent regulating device can be easily adjusted for large or small cherries and the jaws are said to positively retain their position when set. The makers claim that it is impossible for the jaws to become detached. The stoner can be clamped to a table or stand and has a nicely tinned finish.

Cherry stoner No. 75 Jr., is another new stoner, and is claimed to be a rapid

No. 75 Jr. Cherry Stoner.

and convenient machine for seeding cherries. It is equipped with patented self-tightening jaws, which positively retain their set position, and it is said, cannot become detached. The illustration shows the particular angle of the machine from the table, which gives it crank clearance and a more natural position for operating. This angle is claimed to be an exclusive feature to be had only on new standard machines.

Cherry stoner No. 20 is a combination of a tubular one-piece frame, housing the spring which actuates the one-piece malleable iron plunger, makes it rigid, eliminating possibilities of parts jarring loose. Ease in operating is accomplished by an extra long forty-coil spring specially prepared, guaranteed rust proof. Cherries pitted in the No. 20 are said to retain the juice and are delivered in perfect condition to a dish separate from the pits. This machine also has a tinned finish and can be clamped to table or bench.

No. 75 Cherry Stoner.

GRIFFIN'S GARAGE DOOR HOLDER

The Griffin Manufacturing Co., Erie, Pa., offers to the Canadian trade, Griffin's garage door holder No. 1914. The makers claim that the Griffin garage door holder is a simple, strong, practical and serviceable article designed to hold open all doors that swing and that it is so simple that anyone who can handle a hammer and screw driver can put one in place as well as a skilled mechanic. It is made of wrought steel, and is strong enough to hold open the heaviest garage door against the strong winds. It is placed high up on the door, and is entirely out of the way. A chain attached to the holder in a convenient position trips the lock and allows the door to close in the ordinary way. When closed, the holder lays in against the door and would hardly be noticed. The holder is designed to work either right or left hand, as the case may be.

The holder weighs six pounds, and is 32 inches in length when open. They are packed one-half dozen in a case, with screws and full instructions how to put them up.

Griffin's Garage Door Holder.

THE FRIAR'S LANTERN.

The Beacon Miniature Electric Light Co., 118-120 Duane street, New York, offers to the trade the Friar's lantern here illustrated. This lantern is shaped very much like the average oil lantern. In the Friar's lantern the oil form of fuel has been substituted by a dry bat-

The Friar's Lantern.

tery. The Aladdin battery used with the Friar's Lantern, is said by the makers to be a regular stock size carried regularly by all flashlight dealers and readily obtainable in all department, hardware and sporting goods stores. The chimney in the lantern is of stock pattern.

The Aladdin battery is guaranteed to give five hours continuous and 10 hours intermittent service. The lanterns are equipped with Mazda bulbs.

Current News

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Re-Built Store.

The store of Codere, Sons & Co., Sherbrooke, Que., destroyed by fire some months ago, has been re-built, and a new storey added.

Moved to Larger Premises.

E. A. Cole & Co., wrapping paper and supplies, have removed from their old quarters on St. Paul street, Montreal, to larger premises at 160 McGill street.

Opening of Third Store.

Philbin & Co., who already conduct two stores on St. Catherine street, Montreal, are opening a third. They have taken over the store formerly occupied by the Union Hardware Co., at 723 St. Catherine street, West.

C. W. Stairs Married.

The marriage took place on Wednesday, April 28th, of Cyril W. Stairs, director of Wm. Stairs, Son & Morrow, wholesale dealers in hardware and plumbing supplies, Halifax, N.S., to Miss Katherine S. Drysdale, at Brookline, Mass. Both parties belonged to Halifax.

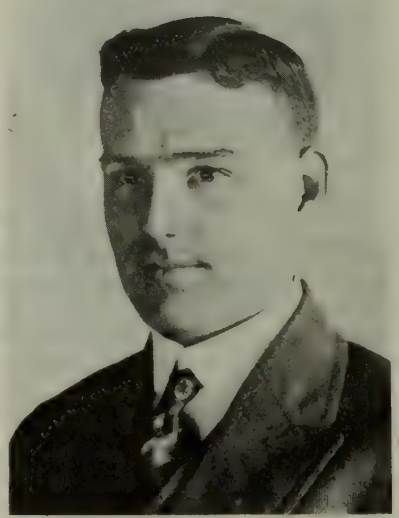
At the Front.

Montreal, Que.—Major R. H. Jamieson, 5th Royal Highlanders of Canada, 13th Battalion, and Vice-President R. C. Jamieson & Co., Ltd., Montreal, Que., was wounded in a recent battle and is now in Boulogne hospital.

Obituary.

Regina, Sask.—The death occurred at St. Jacobs, Ont., of J. Good, vice-president of the Regina Plumbing & Heating Co., of Hamilton, Ont.

Mr. Good had been a resident of Regina for about eight years, and was a well-known man among contractors, having the reputation of being one of the foremost sanitary engineers in the West.



He left for the East about Christmas for a vacation, and was recently operated on for appendicitis and stomach trouble. He was thirty-three years of age.

Montreal Notes.

H. W. Aird, of the Canada Paint Co., B. W. Coghlin, of the B. J. Coghlin Co., Ltd.; G. H. Duggan, of the Dominion Bridge Co., Ltd., and R. H. McMaster, of the Steel Company of Canada, Ltd., are among those who have been nominated for election to the executive of the Montreal branch of the Canadian Manufacturers' Association.

A Quick Recovery.

It was reported in the issue of April 24th, that Mr. J. A. Hossack, sales manager of the Lufkin Rule Co., of Canada, had been taken down with pneumonia while on a trip to the coast and would likely be at the General Hospital, Winnipeg, for some weeks. Fortunately, Mr. Hossack is making a quicker recovery than was expected. He is now out of the hospital, staying with friends in Winnipeg.

ROY STEWART,

Fergus, Ont., who has joined the sales force of Beatty Bros., Fergus, Ont., and will call on the hardware trade in Central Ontario towns. Mr. Stewart has had a number of years' experience as a traveling salesman and during the past few months has been in close touch with Beatty Bros. plant studying the process of manufacture of the firm's many products.

Ontario Incorporations.

The Seamless Rubber Co., Ltd., capitalized at $40,000, head office Toronto, to make and deal in rubber goods of all kinds.

Canada Woodenware, Ltd., capitalized at $40,000, head office Toronto, to manufacture and deal in specialties such as clothes pins, skewers, etc.

Empire Cotton Mills, Ltd., capitalized at $40,000, head office Welland, Ont., to carry on the business of cotton spinners, flax, hemp and jute spinners, etc.

Dominion Incorporations.

Hydro-Electric Radiation, Ltd., capitalized at $500,000, head office Toronto, to manufacture and sell radiators, boilers, stoves, etc.

Armstrong Cork & Insulation Co., Ltd., capitalized at $50,000, head office Montreal, to manufacture and deal in cork, cork board, and cork products of all kinds.

FATE OF AN ALL-CHEAP TRADE MERCHANT.

Can there be good merchandising without good merchandise Both yes and no has been given in answer to this question. Only one can really be correct, although some very specious arguments are offered. In the end the answer must be no. The success of the merchant depends too much upon the quality of his merchandise for him to forego that feature.

No matter how enterprising a merchant may be, clever advertiser and all of that, if his merchandise fails to give good service there is disappointment and in the wrong place, too—the customer. After a while this merchant comes to believe that there is but one thing in retailing—price. So he camps on the price trail. From his wholesaler or manufacturer he demands price, he shops from market to market for a better price. Price becomes his loadstone and he gradually loses sight of quality. This merchant puts forth as much selling effort—perhaps more—than the merchant that approaches his trade by the good merchandise route. The only difference is that it is misplaced. There is plenty of it, but there is no horse-sense behind it.

The merchant with a price mania caters to a cheap trade. There is no good reason to think that he can attract the better class of buyers, and his opportunity to expand his business is curtailed by his own short-sighted policy. Suppose a part of his trade improves their financial standing; do they continue to trade with a price-obsessed merchant?

Junior Clerk's Page

The Clerk and Motor Accessories

How He Can Increase His Importance in the Eyes of the Boss—Knowledge of This Line Will be Essential Someday.

By M. E. MEYERS.

ONE of the greatest difficulties the hardware dealer who handles automobile accessories encounters is in securing clerks who are able to handle this line intelligently; it follows then, that here is a chance for the man who wishes to climb the ladder. It is a sure road towards securing a better job, for the more useful a man is, the bigger his pay.

I was talking to a retailer this week who has handled auto accessories, but has not found them to pay very well. After doing quite well for a little while, he struck a snag, lost all heart, and let the department go to pot. He said, "If I were in a position again where I was contemplating handling accessories, I would give much more space to them, and I'd get a clerk into the store who understood the business. That's been one of my greatest troubles—not having a good clerk by me who understood the line—a man who could tell me from day to day what was required. People may be coming into this store day after day, and asking for auto accessories, and the clerks know so little about the business they are not even able to tell me what has been asked for. Some of those fellows don't know the difference between a muffler and a spark plug, so I can hardly expect to succeed with this line. What we want, sir, is clerks who have made a special study of this line."

"Do you think there is a future for the boy who studies auto accessories?" I asked.

"Yes, there should be splendid opportunities for him. The best way for him to get experience is to become acquainted with as many different cars as possible. A good way would be for him to get hold of a catalogue, and to go carefully over each article. By getting friendly with the owner or workmen in a garage, he would soon find what each item was for. It makes a great difference you know, knowing how to run a car yourself."

One of the best known hardwaremen in Montreal, when he decided to go into the auto accessory business, appointed his son manager of that department. Realizing, however, that his son would require to have a good knowledge of the business before he would be able to make a success of it, and not having any clerks in his store who were capable of giving him instruction, he bought him a Ford car—the car which has made the auto accessory business possible for the hardwareman. With a car of his own, the son was able to practice with and familiarize himself with the accessories he carried in stock. To-day he has a good grasp of the business which has been in operation less than a year.

It often happens that an automobile owner rushes into a store, and leaning over the counter, says: "I wonder if you can tell me what is the matter with my car?" If the clerk is able to go out and assist him, even, though no accessories are required, he has made a friend of the car owner, and his importance in the eyes of the boss is increased.

While it is a good think for a clerk to be able to do this, it is not absolutely necessary, and the average owner would not think of asking a hardwareman to tell him what was the matter with his car: he would take it to a garage to find that out. One does not expect a hardware clerk to be a first-class mechanic. His great opportunity is in knowing the good and bad points of accessories when these are required. He is a salesman, and to be a good salesman he must know his goods.

I would advise you to look around and see if you can find a friend who has a car. From him you will learn the essential points and sufficient knowledge at least to distinguish between the spark plug and the radiator. Secure a catalogue, and study it carefully, for it is one of the best text-books you can find. It will pay you, because the day is coming when a knowledge of automobile accessories will be essential to almost every clerk, particularly in the country. One large jobber of accessories declares that over half of their business in Quebec Province, outside of the large cities, is done with the hardware merchants.

CATALOGUES AND BOOKLETS

Scissors and Shears.

The Acme Shear Co., of Bridgeport, Conn., have just published their catalogue No. 4, showing their complete line of scissors and shears. Among other lines are illustrated in this catalogue, ladies' pocket, buttonhole, manicure, folding and fancy scissors. Also a full line of cast trimmers, banker's, barber's, and tailor's shears and snips. A catalogue will be mailed to any hardware dealer on application to A. Macfarlane & Co., Coristine Bldg., Montreal, who are the Canadian representatives for this line.

* * *

Auto Accessory Catalogue.

Wood, Vallance, Ltd., Winnipeg, Man. have just issued their first catalogue of automobile accessories, which is probably one of the first issued by any wholesale hardware house in Canada. The book, attractively bound in red, contains 122 pages descriptive of practically all the lines for which automobile owners feel the need at various times, and through handling which the hardwareman may make a good profit. Throughout, the catalogue is splendidly illustrated, various sections dealing with head lights, meters, flash lamps, spark plugs, chains, patches, cowl clocks, tools, hood covers, side curtains, jacks, etc. In every case the price is clearly marked, and full information is given about the various lines. The book will undoubtedly be of great value not only to dealers, but to clerks who will find it an educational work.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

Many price changes have gone into effect this week. Among the lines affected are rope, sheet zinc, copper sheets, bars and rivets, galvanized sheets, tinned iron, cheap rim locks and knobs, hinges. Most of the changes have been in an upward direction, although some declines are noted. Metal markets are still unsettled and copper and antimony have reached record prices. An advance is predicted on copper and galvanized wares in the near future.

Trade in general is gradually improving and there is a more pronounced demand for summer goods. The market reports this week are all full of interesting news for the hardwareman.

In the West trade with the farmers has improved considerably during the past week. There has been a heavy demand for barb wire which would indicate that the farmers are practically through with their seeding. There is, of course, considerable speculation regarding the coming crop, but conditions so far are excellent. Price advances at Winnipeg this week occurred on the following lines: Copper rivets and soldering irons, pipe fittings, silver-plated ware, lamp chimneys, carriage heaters, turpentine, borax, shoe thread. There is a fair demand in the West for glass, but not as large as in former years.

MONTREAL.

MONTREAL, May 6.—So far as activity is concerned the spring rush continues in the hardware trade. It is more and more evident from the nature of the re-ordering already being done that dealers generally have continued their close buying policy and are doing a hand-to-mouth business. This has resulted in a flood of comparatively small orders; the volume is almost as great as a week ago, and it would perhaps have been greater had the advanced spring buying spirit not been somewhat checked by cool rains. The latter, however, had the effect of making a brisker demand for lawn goods. Activity is largely confined to country business, and there is little improvement in the city.

The metals situation is becoming such that products are being widely affected. This week there are advances in copper sheets and galvanized sheets and plates, as well as tinned iron, and predictions of higher prices for copper rivets and clout nails and copper and galvanized ware. A number of other important price changes are also announced, and are summarized in the accompanying panel, rope, boiler plates, hinges, etc., being affected.

The Metals.—War demand continues to cause sensational price changes in the market for metals. This week copper is the chief feature locally, with spelter another strong attraction, while antimony rests for the time being, although in New York it is the centre of interest, further increases of 3c to 5c being quoted, while the difficulties of securing supplies at any price are increasing.

Tin.—Despite still easier quotations in New York this week, the Montreal market holds firm at 54c to 56c a pound. Locally the situation still indicates a shortage of supply and holders reluctant to sell. Late advices from New York are that the market there is somewhat firmer, although the spot quotation of 40¼c compares with 42c a week ago. Arrangements have been made with the British authorities that tin in usual and normal amounts may be delivered to well-known jobbers in the States upon the signing of an agreement that the imported supply is to be used for domestic consumption only. This follows the recent embargo confining exports of tin from England to consumers only, which disorganized business to a large extent.

Copper.—Following the advance of ¾c, noted a week ago, copper has continued its upward tendency, and the last quotation for the local market is 21c, which is 1½c above last week. This advance is overtaking the American market, which, however, shows no change from last issue. New York reports conditions somewhat easier with declines in London. Producers are said to be holding for 19c, but consumers are holding off and the market is quoted at $18.62½. Stocks in England and France are reported to have increased 1,200 tons in the last two weeks, but there is no official confirmation. However, with the war demand continuing, it is not thought that there will be any material decline in the near future.

Spelter.—A further increase in the price of spelter of 1c takes the local quotation to 16c, which indicates that this market is evening with New York,

MONTREAL QUOTATIONS.

Tin	54c-56c
Spelter	16c
Copper	21c
Lead, Imported, cwt.	5¾c-6c
Antimony	35c
Solder, ½ x ½	27 to 31
Solder "strictly"	29 to 33
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

MONTREAL MARKET FEATURES.

Copper advances 1½c.
Spelter up another cent.
Tin firm; antimony steady, but 5c up in New York.
Copper sheets and bars up 2c lb. all round.
Copper rivets and clout nails to advance.
Galvanized sheets up 15c, and galvanized Canada plates up 50c.
Tinned iron advances 25c.
Rope—Pure manila up 1c; British manila, African hemp and sisal all up ½c.
Boiler plates down 20c all round.
Sheet zinc advances another 4c.
Copper and galvanized ware predicted to advance 5% to 10% within a week.
Heavy T and strap hinges now 40% off.
Stewarts horse clippers 20% off Canadian list.
Cheap rim locks now $1.40 dozen.
Porcelain door knobs now $1.15 doz.
Brass screws are very firm.
Strong demand for gas stoves.

where 14c is ruling as a week ago. London is quoted at 14⅛c, being over 30 per cent. above the price which ruled on the 1st of April. Here the situation is regarded as being relieved to some slight extent by the shading off of prices on futures, but it is very doubtful as to whether this will last for any considerable period.

Solder.—Prices for solder continue very strong, with a tendency generally towards higher levels, as stocks are becoming exhausted and the higher price of tin becomes a more important factor in the manufacturing cost. For half-and-half 27c to 31c is quoted, and for strictly 29c to 33c.

Lead.—The lead situation continues without important change, although the end of last week saw some improvement in the future business. From New York comes word that second hands are still inclined to make offers under the trust price of $4.20. Locally 5¾c about covers the situation, although there are some quotations as high as 6c.

Antimony.—Although the local market for antimony shows no important change from a week ago, and 35c is quoted, the upward movement in New York continues, and there appears to be no limit to the levels which may be reached. As compared with 35c for Cookson's a week ago, 38c to 40c is now quoted, while Chinese and Japanese are quoted at 33c to 35c, as compared with 30c. There is little doubt but that further advances will have to be made in Canada. Already the quotation is more than three times what it stood at before the war broke out. New York reports a continued demand for futures, with difficulties in doing business because the East will not sell. Europe has stopped exporting, and it begins to look as though China and Japan are going to have very little to spare.

Copper Products.—All copper products are feeling the advancing market for raw material, and general advances are to be expected. Already there is an increase of 2c lb. all round on bars and sheets, the following quotations now prevailing:—

Bars, ½ to 2 in.	$27 00
Plain sheets, 14 oz., 14 x 28 in., 14 x 60 in.	25 00
Copper sheet, tinned, 14 x 60, 14 oz.	27 00
Copper sheet, planished, 14 x 60 base	33 00
Braziers' in sheets, 6 x 4 base	28 00

Copper Rivets.—New and higher prices are to be looked for immediately on copper rivets and clout nails, advice to this effect having been received from the mills. This is the direct effect of the higher cost of raw material.

Screws and Bolts.—The market for screws is very firm. This applies particularly to brass products, quotations having a stronger tendency in sympathy with the advancing costs of raw material. A little better outside inquiry for bolts and nuts has been noted.

Bar Iron and Steel.—The situation as regards bar iron and steel shows little change. Consumption in the hardware trade is light, and the price basis firm; $2 prevails for bar iron.

Sheets and Plates.—An advance of 15c for galvanized sheets is noted. This is the direct effect of the higher prices for spelter, which have prevailed for some time. Galvanized Canada plates have also been advanced.

The prices of the different brands in case lots, 28-gauge, are now as follows:

Sheets—

Queen's head	$4.75
Fleur de Lis	4.45
Gorbals best	4.75
Colborne Crown	4.55
Apollo (10c advance)	4.45

Plates—

18 x 24, 52 sheets	$5.75
18 x 24, 60 sheets	6.00

Other prices may be found in the current market quotations, the adjustment being on the same basis, with broken lots 25c per cwt. extra.

Tinned Iron.—Following an advance of £1 per ton made in London during the week in the price of tinned iron, an increase in the local quotation was made to the extent of 25c a 100. Prices now are:

72 x 30 up to 24-gauge, case lots	$ 9.50
72 x 30 up to 26-gauge, case lots	10.00

Less than case lots, 25c extra.

Rope.—A material change in the basis for rope was announced the middle of the week by the makers. This follows higher costs of raw materials. Pure Manila is up 1c, and British Manila, African hemp and sisal ½c. Quotations now are:

Pure Manila rope	15½c
British Manila rope	13c
African hemp	13c
Sisal	11c

Nails and Fencing.—There is a very fair demand for nails at country points, it being evident that, despite good placing orders, merchants were buying close and that the consumption is very good. Although fencing orders have been shipped, there is still a fair reordering business being done.

Iron and Lead Pipe.—A fair demand for iron and lead pipe continues in country districts in common with general plumbers' supplies. Prices are firm, being 8c for lead pipe and 9c for lead waste pipe net.

Boiler Plates.—A reduction of 20c all round is noted in the quotations for boiler plates, small demand, no doubt, being the reason. Prices now are:

Plates, ¼ in. to ½ in., per 100 lbs.	$2 20
Heads, per 100 lbs.	2 45
Tank plates, 3-16 inch	2 50

Sheet Zinc.—A material advance in the price of sheet zinc is noted. The supply is reported as being very short. Quotations now are:

5-cwt. casks	18½c
Part casks	19c

This is an advance for the week of 4c.

Builders' Hardware.—The demand for builders' hardware is far from normal. However, there is a further improvement noted in the demand for door sets, particularly those of the cheaper grades.

Utensils.—An advance of 5 to 10 per cent. in copper and galvanized utensils is predicted to take place within the next week. This is due to the continued high market for copper and spelter, and the prospects that there will be no material reductions in the near future. Demand for utensils continues very fair.

Stoves.—The feature of the stove business this week has been a live demand for gas stoves and ranges. It is evident that the trade has been putting off buying until the last moment, and that the public demand has been better than anticipated. Other stoves are comparatively quiet.

Hinges.—A change in the price of heavy T and strap hinges has been decided upon, the discount now being 40 per cent. The discount of Stewart's horse clippers has been made 20 per cent. from the Canadian list.

Locks.—The price of cheap rim locks has been altered to $1.40 per dozen, and of porcelain door knobs to $1.15 per dozen.

TORONTO QUOTATIONS.

Tin	45c
Copper	21c
Lead	5¾c
Spelter	15c
Antimony	38c
Aluminum Ingot	23½c
Aluminum Pattern	24½c
Solder, ½ x ½	27c lb.
Wire Solder	33c lb.
Wiping Solder	23c lb.
Tinker's Bar Solder	29c lb.
Wire Nails	$2.35 base
Cut Nails	$2.70 base
Poultry Netting	45%
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp Rope	13c base
Sisal Rope	10½c base

TORONTO.

TORONTO, Ont., May 6.—The general business situation is showing some improvement, largely due to the seasonable weather which is having a

beneficial effect on trade. In the city, conditions are under normal and are not improving to the extent that might be expected at this time of the year. Business in the country districts is good and the outlook very favorable for the farmers. The increase in the volume of business is almost entirely on account of the country trade. There is a fair demand for shelf goods and seasonable lines are moving more freely. A better demand for builders' supplies is reported but here again business is below normal and indications point to a quieter season than usual, as building permits taken out show a marked decrease over the corresponding period of last year. Builders' hardware is, of course, subject to the same influence and for this reason business is comparatively quiet.

Galvanized and copper goods are subject to fluctuations on account of the increasing cost of spelter and copper. For this reason it is extremely probable that galvanized ware will advance while higher prices are also anticipated for copper ware. New prices for Manila and African hemp rope are announced this week. The rope market is stronger and business is more active.

The Metals.—The feature of this week is the continued strength of the copper, antimony and spelter markets. The heavy demand for the two former metals for munitions is unabated and prices continue to advance. As regards spelter, the demand is greater than the supply with the usual result, high prices. Tin is weaker and has declined. The spot situation has improved in the New York market. Solders are lower, following the tin market. The antimony market is very strong and the scarcity of metal has resulted in abnormal prices. The antimony situation is unprecedented, entirely owing to the large consumption of this metal for war munitions. The demand locally is brisk for metals for war purposes; outside of this, business is quiet.

Tin.—The situation as regards the New York market has improved, the British Government having modified the restrictions placed on shipments of tin to the States. Tin will be released in moderate quantities to well-known jobbers upon a signed agreement. Visible supplies are increasing and the market is easier. A decline of 5c is to be noted and tin is quoted locally at 45c per pound.

Copper.—The market is quiet but strong and advancing. The already heavy demand for copper for war materials is increasing, and higher prices may be expected. The high price of copper has resulted in the resumption of all producers and there is every there will be an unprecedented production. Copper has advanced 1c and is quoted at 21c per pound.

Spelter.—The situation is unchanged and the market continues to advance. The great strength of the market is due to the fact that the demand is greater than the supply. Producers are sold ahead to such an extent that urgent requirements cannot be covered. Spelter has advanced 1c and quotations are entirely nominal at 15c per pound.

Lead.—The market is dull and slow but there is a stronger undertone noticeable as the surplus offerings are practically cleared up and most of the companies are refusing to sell for future delivery except at a sharp advance over present quotations. Independent producers are well sold and are holding on trust prices or higher. Lead is quoted locally at 5¾c per pound.

Antimony.—There continues to be a very large demand from consumers for future deliveries and dealers have already sold out most of the antimony that they have bought for future shipment. The situation is becoming more acute and much higher prices are anticipated. Antimony has advanced 3c and quotations are nominal at 38c per pound.

Aluminum.—The market is steady and unchanged at 23½c per pound.

Solders.—All lines of solder have declined owing to weakness in the tin market. The following new prices are quoted; Half-and-half, 27c; wire solder, 33c; wiping, 23c, and tinkers' bar, 29c per pound. Other lines are given in the current market quotations.

Pig Iron.—The market is dull with light demand. It is expected that a quantity of Canadian pig iron will be shipped to manufacturing interests in England this season. Hamilton and Victoria brands are quoted at $79 per ton.

Bar Iron and Steel.—The present activity in the steel trade is due largely to the demand for steel for shells. Apart from this, business is comparatively quiet. The demand from manufacturing interests is a little heavier but below normal. Prices on bars are firm and unchanged at $2.05 base.

Wire Nails.—The market is quiet and prices are firm at $2.35 base. Cut nails are being quoted at $2.70 base.

Iron and Lead Pipe.—The market is firm and demand for iron and lead pipe is showing some improvement. Prices on lead pipe are firm at 8c and for waste pipe, 9c. Iron pipe prices are given in the current market quotations.

Brass Wire Advances.—Brass wire has advanced. the new discount being 25 per cent. Galvanized and copper wire prices are firm and an advance is not at all improbable. Smooth steel wire is quoted at $2.30 base.

Rope Advances. — The market is stronger and higher prices on rope are announced as follows: Pure Manila, 15½c; British Manila, 13c, and African hemp, 13c base. This represents an advance of 1c in the case of pure Manila and ½c for each of the other lines. Business has been quite brisk lately, but the situation as regards raw materials is unchanged and unsettled.

Kitchen Utensils.—It is highly probable that prices on galvanized and copper ware will have to be revised again. No particulars are at present available as to what may be done to meet the situation, but the increasing cost of spelter and copper may make an advance imperative. The scarcity of the former metal has also to be considered.

Galvanized Sheets.—The expected advance in galvanized sheets has materialized and prices are 15c higher. Galvanized Canada plates are also higher, having advanced 50c per box. The advance is due to the increase in cost of spelter.

LONDON.

LONDON, Ont., May 5.—Business continues fair. Spring and early summer lines are moving in fairly large quantities. Collections are fair. Quotations in rope have advanced this week. Loaded shells have also advanced.

Rope Advances.

The advanced prices on Manila and African hemp rope are as follows:—

Pure Manila	15½c lb. base
British Manila	13c lb. base
African hemp	13c lb. base

Prices on twine are as follows:

650 ft.	12¾c lb.
600 ft.	10½c lb.
550 ft.	8¾c lb.
500 ft.	8½c lb.

⅛c per pound allowance on 5 tons.
¼c per pound allowance on 10 tons.
Terms November 1.

Linseed Oil.

Linsed oil quotations remain unchanged from last week, and the prices in effect are as follows:

	Raw.	Boiled.
1 to 2 barrels....	81c	84c
3 to 5 barrels....	80c	83c
6 to 9 barrels....	78c	82c

Lead remains unchanged, and is quoted for Government pure grade in ton lots at $9.10 per 100 lbs. and in less than ton lots at $9.40 per 100 lbs.

Turpentine remains unchanged and is quoted in single-barrel lots at 73c per Imperial gallon and 72c in 2 to 4-barrel lots; 5-gallon lots are quoted at 80c per gallon.

Wire Nails, Etc.

Wire nails are in fair demand. The present price is $2.35 base for wire and $2.70 base for cut nails. Most of the larger buyers booked for wire nails some time ago when quotations ranged around

$2 base. Wire from stock is quoted as follows:

	Per 100 lbs.
Barb	$2.55
No. 9 soft, galv.	2.30
No. 12 soft, galv.	2.45
No. 13 soft, galv.	2.55
9-coil spring	2.35
Oiled and annealed, No. 10..	2.35
Oiled and annealed, No. 11..	2.52
Oiled and anenaled, No. 12..	2.60

WINNIPEG.

WINNIPEG, May 6.—During the past week there has been a considerable improvement in business generally. Especially has the demand for barbed wire been brisk. Very evidently the farmers are now practically through with their seeding, and are getting to the towns to get the supplies which they need. Practically all the wholesalers are receiving daily telegrams asking for deliveries of the wire for which dealers have already placed orders. One wholesale house received five car-load orders in one day. While there is little profit in handling this line, and while it must be borne in mind the orders now being filled have been placed for some little time in many cases, the demand nevertheless does seem to indicate an improved condition.

Good Rains So Far.

Of course, there is much speculation as to the coming crop, and a careful watch is being kept in this regard. Reports from a number of travelers indicate that in Southern Alberta splendid rains have fallen, and that so far conditions are all that could be desired. This seems to be a general state of affairs throughout the West.

Copper Rivets Up.

Owing to the advance in the price of copper, a higher price has been fixed for copper rivets. These are now quoted as follows:

No. 7	38c
No. 8	39c
No. 9	40c
No. 10	42c
No. 12	44c

Soldering Iron on New Base.

Also because of higher price of copper, soldering irons have been materially advanced, the new base being 40c.

Advance in Pipe Fittings.

For nipples, couplings and pipe fittings, higher prices have been fixed, the advance being about 20 per cent.

Looked for Advance in Horse Nails.

Horse nails are still quoted at the old discount of 10 and 5 per cent. off. There seems every indication, however, that this price will be changed very shortly—perhaps before this issue is in the hands of its readers. The change, of course, will be in an upward direction.

Silverware Up 8 Per Cent.

An advance which is important at this season, when hardware dealers may well expect good business in lines suitable for wedding presents, is the rise of 8 per cent. in the price of community silver and reliance plate. This advance, of course, has been made necessary by reason of the 7½ per cent. duty placed upon both finished products and raw material.

Sash Balances Up.

Another important advance is that in Caldwell sash balances, which are now quoted at 37½ per cent. off—an advance of 10 per cent. This is the result of the new tariff.

Sisal clothes lines are on a higher basis this week as follows:

48 ft. per doz.	72c
60 ft. per doz.	90c
72 ft. per doz.	$1.80

Lamp Chimneys Higher.

Still another line, which is in general demand, and which shows an advance, is lamp chimneys. These are now quoted:

A, per case (8 doz.)	$4.10
Per doz., 60c.	
B, per case (6 doz.)	4.10
Per doz., 75c.	

Carriage Heaters Also Up.

The war tariff has also necessitated an advance in the price of carriage heaters. These are now 15c up, the price being:

5D	$1.65
3D	2.20
7D	2.50
Coal, A B C, per doz.	0.65
Coal, Clarke	0.80

Turps. 5 Cents Higher.

Turpentine.—Here there is a rise of 5c, the price for barrel lots now being 80c less than barrel lots, 85c.

Resin is up 1c, now being generally quoted at 6c per lb.

Borax Advances Another Cent.

An advance of 1½c in borax, bringing the price to 8c per lb., was noted last week. This has been followed by a further rise of 1c, making the price at present 9c per lb. For those supplying blacksmith supplies this is especially important.

Shaving Soap Must Be Quoted.

In so many hardware stores now soap is being handled with shaving material that a rise in the price of Colgate's products is important. The sticks, cream and powder, are up 15c per doz, being now quoted at $2.65. Barbers' bars are now being quoted at 35c per lb.

Shoe thread has again advanced 10c, owing to the continued scarcity of the required flax. Even at the very high price now being asked thread is hard to get, and it seems quite possible that there will be a serious scarcity.

Present quotations are: No. 8, $1.15; No. 10, $1.23; No. 12, $1.26; No. 15, $1.33; No. 20, $1.38.

For paint lines a strong demand is noted—better than many expected. For glass, too, there is a very fair call, though not as large as in former years. The falling off is still from the city districts.

POINTERS ON CARRYING AUTO ACCESSORIES.

(Continued from page 54.)

touch them unless you have somebody to put them on for you; they are all right for the mechanic. A stock of one rear mirror is enough. Ford parts are necessary; a good stock will cost $20.

Two dozen grease cups are ample, and two oil gauges. Slip covers—the country merchant can sell them from his own car. Radiator and hood covers — not more than three, depending on nearness to city.

Then there are a lot of regular lines which should be carried, such as lighting switches, Ford switch keys, lighting wire (50 ft.), ignition wire (50 ft.), terminals, dry cells, flash lights, but don't overstock on flash light batteries.

A Montreal dealer, who took on this line a year ago, carries $500 worth of accessories, and $500 of tires and tubes. He did $4,500 worth of business the first year.

For the convenience of hardware merchants who are on the point of going into automobile accessories, but are not quite sure what lines they should carry, one Canadian jobber has hit on an ingenious plan which enables the dealer to buy in $25 or $50 assortments, the assortments being worth considerably more when figured at regular dealers' prices. The following list gives an idea of what the dealer is able to secure in one of these $25 assortments: 6 spark plugs, trouble lamp, ammeter, 6 dry cells, clock, license brackets, starter handle holder, fan belt, robe rail, Ford valve, valve spring, valve grinding compound, 2 gals. oil, tire band, blow out patch, tire patches, tire tool, pump, jack, body polish, lamp enamel, pair of goggles, tire paint, top dressing, radiator cement, rubber mat, pedal pads, and pedal lock.

The hardwareman who is contemplating putting in a stock of accessories should get in touch with some of the car owners in his vicinity, and find out what lines they are in the market for. This will be of assistance to the retailer in selecting his stock and will also be appreciated by car owners.

Paint Department

Merchant Increased Paint Sales $1168

Hardware Merchant in Ontario Town Increased Paint Sales $1,168 *Last Year —Used Common-sense Methods—May is the Best Paint Month.*

IN Ontario there is a town of about 5,000 population, boasting of three hardware stores. The total population of this town has not varied more than two or three hundred in the past ten years. It is situated in a wealthy part of the province and caters to a good class of farmers in the surrounding district. Only a limited amount of building has been done during the past few years. The town is simply a good live country town. Do you think a merchant could work up a good paint trade in a town like this? No doubt, you believe a merchant could work up a good volume of trade.

In the town referred to, the three hardware firms carry splendid paint departments and do a good volume of business, but last year one of the firms increased the year's paint sales by $1,168. Now think it over. A merchant in a town of 5,000 with two competitors, increasing his paint sales by over one thousand dollars in one year.

The merchant attributes his success in selling paint last year, largely to results obtained through using newspaper space in the local weekly paper and giving good service to customers when they visited the store. He started early in the spring to run a series of ads in the local paper. These ads occupied the same space each week on the front page of the paper. No advertisement was allowed to appear a second time. Copy was changed each week. These ads appeared each week from early spring until late in the fall, and although the war broke out in August and upset business considerably, the merchant in question increased his volume of sales in paint alone $1,168. Of course, we must not overlook the fact that window displays helped to play an important part in the paint-selling campaign. The store windows and newspaper advertising were linked up together, and some mighty attractive paint displays apeared in the show windows during the spring, summer and fall months.

All advertising co-operation offered by the manufacturer whose lines were sold, was accepted and made use of, and a selected mailing list was circularized at regular intervals.

The results secured by this merchant are certainly worth striving for, and there are hundreds of other hardwaremen who could accomplish just as much if they only had the push, and used the same common-sense methods as the merchant referred to in this article.

FATE OF AN ALL-CHEAP TRADE MERCHANT.

(Continued from page 60.)

They do not. Instead, they seek the merchant who in season and out has talked quality. He has bid and bid for better class of trade and built up a goodwill structure to his business by carrying merchandise with quality as its first consideration. Price has been a mere incidental to the transaction of emphasizing good value.—Reprinted from "The Dominion," published by the Canadian Consolidated Rubber Co.

An excellent combination paint and stove window display arranged by Herb. Moxon for J. Moxon & Sons, Picton, Ont. The banner in front of the miniature house was kept in motion by an electric fan.

Our Tiger (50 cent line) Brooms

are superfine carpet **BROOMS** on **polished** handles. Offer them to your customers and secure business that stays. Splendid value in 35c, 40c, 50c, 60c lines. Try a sample shipment and be satisfied.

Weekly Paint Markets

MONTREAL.

MONTREAL, May 6.—Although the wet weather of the past week has probably interfered to some extent with the demand for paint, the trade reports a continuance of the brisk spring rush and generally heavy deliveries. Not only were shipments somewhat deferred this year, owing to the hand-to-mouth policy followed by most merchants, but the advanced spring weather has encouraged consumption, with the result that the reordering is commencing earlier than was to be expected, and a busy May is anticipated.

The price situation shows little change except in some of the miscellaneous lines, particularly where imported colors are a factor. The color situation becomes more acute as supplies become exhausted, without any indication of an early suspension of hostilities in Europe.

Linseed Oil.—The oil market is practically unchanged, and the firm tone continues. Refiners report continued heavy consumption. Dealers are charging about the same prices as a week ago, although there is some slight narrowing of the range caused by the disappearance of the former low price of 80c and 83c, the bottom now being 81c and 84c, with the top 88c and 91c.

	Raw.	Boiled.
1 to 2 barrels	81-88c	84-91c
3 to 5 barrels	80-87c	83-90c
6 to 9 barrels	79-86c	82-89c
10 bbls. and over ...	78-85c	81-88c

Gasoline.—The spring movement of gasoline to the country continues, and business is regarded as being altogether satisfactory, all things considered. Prices are unchanged, 15c being charged for drums and 14½c for tank wagon.

Turpentine. — Situation continues firm, with the bottom price of the range 1c under that being quoted by the refiners. Price range is as follows:—

	Per gal.
½-bbl. lots	70-72c
1-bbl. lots	67-69c
2 to 4-bbl. lots	66-68c
5 to 10-bbl. lots	65-67c

Lead and Zinc.—The market for lead and zinc is steady and firm. Lead is quoted $8.95 for tons and 30c higher for broken lots, and zinc around 14c for 25's.

Glass and Putty.—Market for glass continues unsettled, with the basis unchanged, although it is now little better than nominal. Putty is firm, and there are some changes that will take place when new supplies of whiting are required owing to the higher ocean freight rates prevailing.

Dry Colors.—The situation becomes more acute owing to the prospects for a protracted conflict in Europe. The entire disappearance of some shades, particularly certain bright reds, is now only a matter of time, as some makers have already exhausted their supplies of colors. Prices are nominal and very unsettled.

TORONTO.

TORONTO, Ont, May 6.—There is a fair volume of business moving, stimulated by the seasonable weather, but the improvement that is noticeable is hardly equal to last spring. Considering the time of the year, the city trade is quiet, and consumers are buying in smaller lots than is customary. Those manufacturing interests generally using considerable quantities of paint are not taking as much as in normal times. The country trade is far more satisfactory and prospects are favorable for a considerable increase in the volume of business. The market is quieter and there are fewer price changes to announce. Prices of all glues have advanced due to scarcity of raw materials and increased high freight rates. Whiting has advanced and the shortage of tonnage is delaying shipments. Linseed oil and turpentine are unchanged but firm. The glass situation is unchanged and business is quiet. Financial conditions are easier, but collections are slow.

Linseed Oil.—Flaxseed is stationary but very firm in Winnipeg, and crushers are reported as not having any great quantity on hand. The price of oil on new contracts is very firm and jobbers holding cheaper oil are gradually getting rid of their stock. These conditions accompanied by a heavier demand which is anticipated, may result in higher prices for oil. Prices are still irregular and although 80c is generally quoted, 88c is heard of in some quarters. The following prices are more generally being quoted in Toronto:

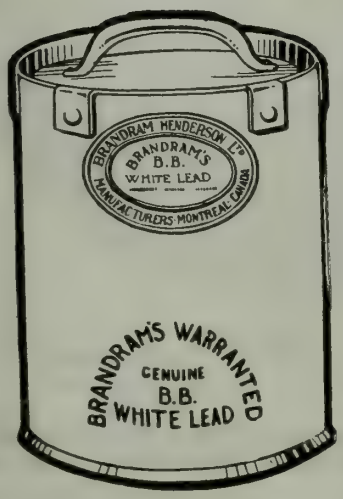
	Raw.	Boiled.
Single barrels	80	83
3 to 5 barrels	79	82
6 to 9 barrels	78	81

Turpentine.—The market is very firm and may advance. Turpentine now arriving in Toronto will be 1c to 2c higher than any shipments which have been delivered here up to the present time. Light quantities of new turpentine are coming in at Savannah, which may indicate that the output is being restricted. The resin market is very firm, prices having advanced 25c per bbl. The following prices are being quoted in Toronto for turpentine: Single bbls., 73c; 2 to 4 bbls., 72c; and 5-gallon lots, 80c per Imperial gallon.

Whiting.—A scarcity of whiting is being experienced and the situation is further complicated by the high ocean freight rates and shortage of tonnage. Prices have advanced, plain whiting being now quoted at $1 and gilders' at $1.10 per 100 lb., representing an advance of 10c per cwt.

Glue.—Raw materials are very scarce and high in price. Shipments of imported glues are difficult to obtain and in addition, freight rates are high. Prices on imported glues have advanced 2c per pound, quotations being as follows: French medal, 18c; English common sheet, 14c; cake, 12c; hide, 20c; ground No. 1, 15c, and extra 18c per pound.

Gasoline.—The demand is brisk and increasing with the market firm at 18c per gallon. Coal oil is quiet, quotations given in the current market quotations.



Glass.—The market continues in an unsettled condition and as yet no action has been taken with regard to a revision of the list. The situation is unchanged.

Putty.—The demand is light but the market is very firm; higher prices are anticipated. The following prices are for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.40
Bulk drums, 100 lbs.	2.60
Bulk drums, 50 lbs.	2.65
Bulk drums, 25 lbs.	2.70
Bulk drums, 12½ lbs.	2.95
Cased tins, 25 lbs.	2.90
Cased tins, 12½ lbs.....	3.10

A Chapter on White Lead

The Can And Its Con-tents

What is in the Can?

If it is as good as the can looks it is very good in-deed.

How neat that rich brown looks, with the Brass Embossed la-bel. What does it say?

"Bran-dram's B. B. Gen-u-ine White Lead!"

Pry up the lid—it's very white and very fine—that's what we like to see; there's nothing like it.

This is the famous Bran-dram's B. B. Gen-u-ine White Lead, well known in ev-ery quar-ter of the Globe.

The leading White Lead of the Bri-tish Em-pire.

The most ec-o-no-mi-cal be-cause it covers most and is most dur-able.

Made by the orig-inal Bran-dram pro-cess of corrod-ing.

By this process through pro-per matur-ing methods, the lead be-comes best fit-ted to meet all clim-atic con-di-tions with-out losing its elas-tic-ity.

This is the White Lead every-body is asking for to-day.

Are you prepared to supply the demand?

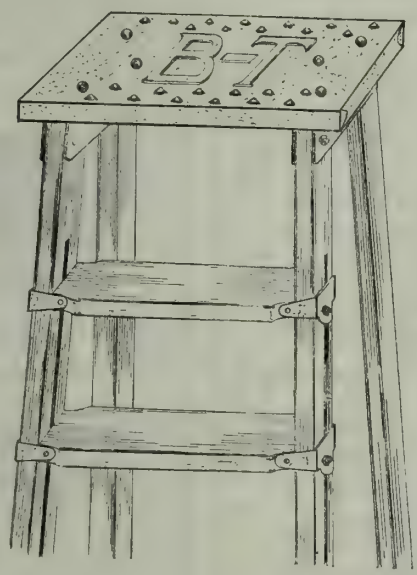
The Best Step Ladder

Galvanized Top

Every housewife in your town needs a good step ladder. They need it for fixing up, dusting, hanging curtains, washing the windows, hanging pictures, and even for picking the cherries and apples in the back-yard.



Show them a strong, substantial ladder and they won't be bothered climbing up on tables and chairs. Any hardware man who will push ladder sales can sell fifty in early summer.

Sell the BT Iron Bound Step Ladder with the Galvanized Steel Top. It is a light ladder, at the same time the strongest ladder made. The Steel Top never warps or cracks. There are no nails to pull out. The steel is ten times more durable than any wood top and holds the legs firmly long after other ladders have gone to pieces.

Write for prices.

A Complete Line

The BT Ladder Line Includes Step Ladder with Galvanized Top, two lower-priced grades of Step Ladders. Fruit Picking Ladders, Painters' Ladders, Single Ladders, Extension Ladders.

Beatty Bros. also make—

BT Pumps.
BT Daisy Churns.
BT Washing Machines.
BT Water Bowls, Pipe and Tanks.
BT Barn Door Track.
BT Grain Grinders.
BT Butter Workers and Boxes.
BT Hay Carrier Goods.
BT Oat Bowls and Feed Racks.

Iron-Bound Sides

Every Step on BT Step Ladders is bound with iron after first being nailed to the legs. The iron prevents the nails pulling out. An iron rod is bolted to the sides under each step so the ladder will stand enormous strains.

This is a durable ladder, made to stay rigid as a rock after years of banging about, inside and out.

Steel Trussed Extension Ladders

The BT Extension Ladders are the strongest made. They are trussed with iron wires running beneath the risers and drawn so tight as to take most of the strain. The wires are attached at both ends to a threaded bolt which can be tightened if desired.

On many other Extension Ladders the wire runs along the side of the riser and not underneath it, thus offering no support.

Every farmer needs an extension ladder. His Fire Insurance Policy calls for it. Get prices on the BT Line.

Beatty Bros., Limited, Fergus, Ont. and Winnipeg, Man.

KALSOMINE BRUSHES

are now in demand.

This cut represents one of the money-makers which we offer. They are most securely made, even in the lowest-priced Brushes, and are well finished. There is no line of Kalsomine Brushes on which you can get as good a profit as on Keystone Brand.

Manufactured by

Stevens-Hepner Co., Limited

PORT ELGIN, ONTARIO

TRADE MARK KEYSTONE BRAND REGISTERED

Butler's

FAMOUS SHEFFIELD CUTLERY

HAS STOOD THE TEST
FOR MANY GENERATIONS

It is made throughout on their own **premises,** from finest grade of steel, regardless of cost, by skilled workmen.

Butler's "**KEEN**" and other Razor brands are BEGUN AND FINISHED at Trinity Works, **NOT SENT** to Germany for grinding.

"Sheffield made,
Both haft and blade."

TRADE-MARKS

All the beauty that can be desired in a hammock!

HOHLFELD HAMMOCKS

ARE REAL HAMMOCK SALES BOOSTERS

HOHLFELD HAMMOCKS SELL FASTER

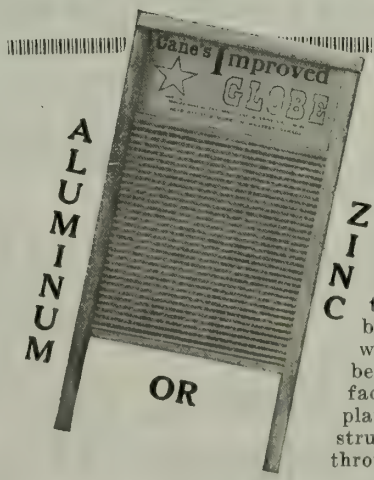
because of their exceptionally classy color combinations and designs and they are made for harder wear and highest satisfaction.

Our yarn is made of the very best high grade cotton, hard spun, thus containing the **most tensile strength** and bringing out the design and colors.

Their extra stringing cords at each end add triple strength where the greatest strain prevails.

Our **Patent End Casting** to which the cloth is fastened, will not permit spreader to poke through cloth.

Although better, our facilities enable us to produce them at the price of ordinary hammocks.



Swell your profits. Order now.

The Hohlfeld Manufacturing Co.

PHILADELPHIA, PA.

Canadian Agents:
Mackenzie Bros., Winnipeg.
Wm. Rogers, 91 Youville Sq., Montreal.

Cane Quality and Appearance BETTER STILL

The price of zinc having advanced so materially on account of war, it has now reached a point where aluminum in its pure form can be used in the place of sheet zinc, and we are prepared to deliver our standard brands of washboards, which have formerly been delivered with zinc face only, with aluminum plate, on receipt of instructions from customers, through the jobbing trade.

The Advantage in Using Aluminum

is that it is **less liable to crack, split or carry defects** that will tear the clothing being washed on it, and that it has much **brighter appearance than zinc** and is **more attractive and more easily** sold on that account.

Knowledge is Power

That is why we advertise, for we believe that the more we can tell you about ourselves, the more knowledge of our methods of doing business you will have.

The more knowledge of our Service and policy that you possess, the greater will be your desire to join forces with us; for you will appreciate all that this "Service" will mean to you.

If you buy and sell Hardware, Sporting Goods, Cutlery and Heavy Goods, or any of the four, you will want to deal with "The Big Winnipeg House" eventually, for our "Service" and policy make prosperous Merchants. Why hesitate another day when all we offer is within your reach? Write to us and we will have our Traveller call and tell you all about our Service; or write for a Catalogue. Tell us what you are interested in, and we will send you the information pertaining to your line.

The ambitious Merchant cannot afford to be without our "Service," for it is the shortest cut on the road to his prosperity.

The TIME--The PLACE --And the FILE!

NOW is the time to make YOUR STORE the place where farmers flock for the "FAMOUS FIVE" Mower Files:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE

(Made in Canada)

Bumper crops should make this year the *best ever* in Mower Files. And the fact that we supply 90% of Canada's file requirements gives you an idea of what you can expect with the "Famous Five."

Behind them are 50 years' experience—5 great plants —a 60,000,000 yearly output —and a record of 90% of the country's file-trade. No wonder the "Famous Five" *win and hold* trade wherever they go into service.

A Straight Talk By The Manager

This New Business Belongs to You, If You Want It.

I have it on good authority that there are now no less than 60,000 Ford Motor Cars in commission in Canada. The Canadian factory of the Ford people will turn out 30,000 more cars this year, of which 5,000 will be sold in Australia and New Zealand. The remaining 25,000 will go to swell the number of Canadian Fords.

Now, the Ford owner is the best prospect in the world for auto accessories. The average Ford owner will spend from $60 to $100 per year at the least, and he can be induced to spend much more when he is shown that the investment will make his car as comfortable and easy-running as cars of a much more expensive class.

If the Ford were the only car in existence in Canada there would still be good profit for you, wherever you are located, in selling auto accessories. And the advertising section of this week's issue of Hardware and Metal will prove an invaluable guide to you, in establishing what will be one of the most profitable departments in your store.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

JIFFY Detachable Screen Door Hinge

Patented

Illustration shows door being hung without tools. Pull the lever and it's done. No more trouble with screws—the parts have only to be screwed on once. Nothing to equal it for WINTER STORM DOORS, as well as SCREEN DOORS. Made in all finishes, twelve pairs packed in a box. Also individual sets, which includes one pair hinges, screws, handle, hook, one set to a carton.

Be sure and have your jobber show you this hinge before buying others, or WRITE FOR SAMPLE TO

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps
They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

What's Doing in Hardware?

Things are moving in the hardware trade. New lines are constantly being introduced and new ways of getting business are coming to the fore continually. Prices on even the most staple hardware articles are subject to changes of startling suddenness in these stirring times. Events of the utmost importance are taking place all the time among the manufacturers, wholesalers and retailers of hardware. The hardwareman who does not keep in touch with all these developments is in great danger of "getting into a rut"—the worst enemy of business progress.

There is only one way for Canadian hardwaremen to learn, every week, of "What's doing in hardware," and that is by subscribing for and reading Hardware and Metal, Canada's only hardware weekly. In this way he will not only have the satisfaction of knowing what is going on in the trade all over Canada, but each week's issue will point the way to increased profit from his store—by showing how he can economize in his buying, and giving him the latest and most accurate market information; by telling of the schemes other hardwaremen are adopting to their advantage; by suggesting new fields for developing business; by advising of the newest things which are being offered by hardware manufacturers.

Just Take This Issue For Example

If this issue contained nothing but the department of motor accessory advertising, any live retailer could get enough ideas from it to pay his subscription to Hardware and Metal for many years to come.

TRY IT AND SEE. THEN, IF YOU ARE NOT A REGULAR SUBSCRIBER, SIGN THE COUPON AND RETURN QUICKLY, SO THAT YOU WILL NOT MISS A SINGLE ISSUE.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Convenience
Quickness
and Economy
that fills a long-felt want

THE "CANNON OILER"

FORCES THE OIL ANYWHERE by simply pressing on the plunger. The oil is entirely controlled by the operator in whatever position the can may be held.

SAVES THE OIL. As the flow of oil ceases the instant the pressure on the plunger stops, not a drop of oil need be wasted.

TRY IT. THE SALES WILL SURPRISE YOU.

R. E. BLOOMER
KEITHSBURG, ILL.

Atlas
10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

St. Catharines, Ont.

PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.

You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

The Banwell-Hoxie Wire Fence Co., Ltd.

CHICAGO STEEL BENDING BRAKES
(Made in all sizes)

Regarding the Steel Bending Brake we purchased last Spring, are pleased to report that we are more than delighted with this machine, not only with the way it is constructed, but with the work it turns out. We formerly used a —— brake, but are very glad indeed now that we have made the change. We get more speed and better results.

Yours truly,
THE McCLARY MFG. CO., C. E. Main, Manager

EUREKA GLASS TANK SPRAYER

STRONGLY MADE. WELL PAINTED. ATTRACTIVELY FINISHED. For Spraying Potatoes, Tobacco, Small Shrubs, and all disinfectants in poultry houses and on live stock, this will be found an excellent sprayer.

The pump cylinder is supplied with an air chamber, which prevents any of the solution being drawn back into the valves, and also greatly increases the pressure when spraying. Discharge tubes are brass—no corrosion. Pump rod is hard steel. Plunger leather is of special type, and is made from heavy calf leather. Equipped with regular crown jar and ordinary rubber ring.

FULLY GUARANTEED. PRICES ATTRACTIVE.

Made in
La Salle, Ill
— by —
Westclox

BIG Ben is the biggest thing to-day in the American alarm clock industry. He has everything in his favor—quality, looks, and style. He runs on time, he rings on time, he stays on time.

Slender, massive, richly plated, he stands seven inches tall, with well-shaped distinct hands and a big broad dial easily visible in the dim morning light.

He rings just when you want and either way you want—*five straight minutes* or every other half minute *during ten minutes* unless you shut him off.

His keys are large, strong, easy to wind; his voice deep, jolly, pleasing to hear. The movement plates are bridged like on a Waltham watch— you can change both mainsprings *without taking the movement apart.* The pivots are of hard steel piano wire $\frac{22}{1000}$ of an inch thin. The escapement is a hardened steel pallet escapement—not a pin escapement like that of other alarm clocks.

We are carrying on hand a stock of Big Ben specially put up for *Canadian* trade, 6 in a carton together with a full set of Store Selling Helps, (posters and show cards.) On an order for 12 we give a solid mahogany display stand. On an order for 24 we print your name free on dials and with an order for 48 we send a striking, electric flashing sign, just the thing for your window or counter.

The minimum retail Canadian price is $3.00, and there's a $3.00 resale tag on everyone you buy.

RICHARDS-WILCOX "BULL DOG" JOIST HANGERS

"THEY NEVER LET GO"

The builder who once uses Bull-Dog Joist Hangers will never go back to the old method of framing.

THEY SAVE TIME—With Bull-Dog Hangers, Joists can be hung in half the time required to mortise or spike them in. Time is money.

They greatly increase the STRENGTH of the construction.

They are INEXPENSIVE.

They are much superior to other types because they do not weaken the beam, fit better and never crack.

See Supplement "A" showing all styles and sizes

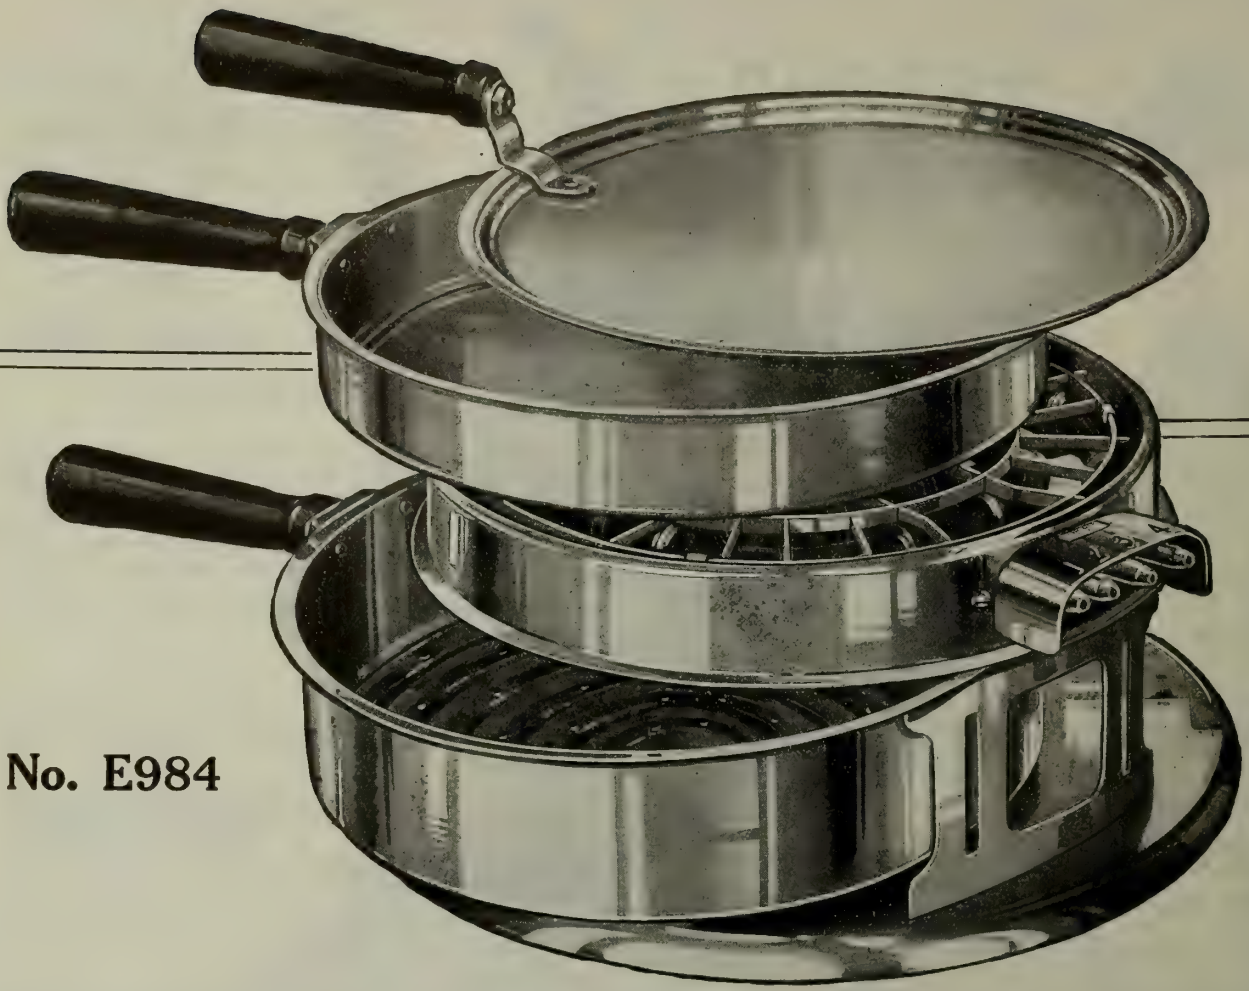
"The Hanger People"

A PROFITABLE ADDITION TO YOUR AUTOMOBILE ACCESSORY STOCK



CARBORUNDUM VALVE GRINDING COMPOUND

EVERY automobile, motorcycle and motor boat owner needs it—it's the compound that cuts the Carbon—removes the pits, quickly, easily—leaves the valve with a clean, true seat and only half the time half the effort is needed. The compound is a mixture of Carborundum grains and a high-grade grease—and you know how Carborundum cuts.

Put up in the handy combination cans holding coarse and fine compound or in collapsible tubes.

Put Carborundum Valve Grinding Compound on your shelves. It won't stay there long. Write for prices and discounts, advertising material, etc.

THE CARBORUNDUM COMPANY
NIAGARA FALLS, N. Y.

No. E984

The New
UNIVERSAL
Round Radiant Grill

Three Heats: **Fast, 600 Watts** **Medium, 300 Watts** **Slow, 150 Watts**

By simply changing the connection plug from one set of terminals to the other, the first, second or third heat is immediately at your command. This feature means a degree of efficiency never before attained in a similar appliance; it eliminates wasted heat, consuming only the actual amount of current required. Saves its initial cost in a very short time by greatly reducing the cost of operation.

This appliance will do the work of a gas or small coal stove and may be used in conjunction with most of the cooking utensils found in the average kitchen. Its three-heat element produces an intense heat for cooking, a lesser heat concentrated in the center, for small utensils, such as coffee pots, tea pots, double boilers, etc., and a simmering heat for food warming purposes.

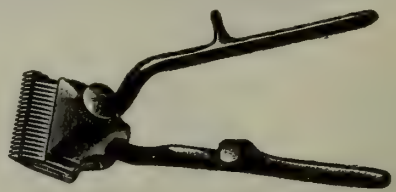
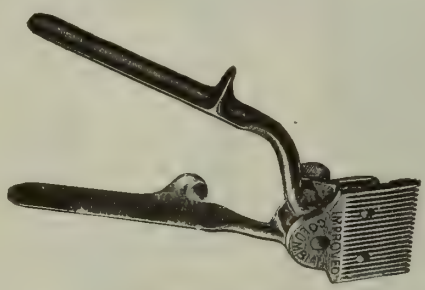
LEWIS BROS. LIMITED, MONTREAL

PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.



present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1, and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

New Machines with an Old Trade-Mark

Both are Cummer-Dowswell's

Always use C-D Wringers with C-D Washers. The Combination gives Unequalled Results.

The "MAGNET" is one of the easiest running and most convenient to operate hand washers of the many we have produced. It can be operated sitting or standing. The mechanism is attached to side of tub (instead of cover), and can be belted to either gas, gasoline, steam engine, windmill or electric motor power without any change to gearing. Cover can be lifted without removing belt or stopping power.

The "NEW CENTURY JUNIOR" is a swinging tub hand washer built on the well-known and time-tested NEW CENTURY principle, but without a rod up through centre, leaving nothing inside the tub but two rubbing boards.

Both have the same perfection in construction, materials, easy running and lasting qualities that have made our products known and used from Halifax to Vancouver.

CUMMER-DOWSWELL, Limited

HAMILTON, ONT.

GARBAGE CANS

Hardware Dealers—**An exact duplicate of the ad. below appears in the May 13th and 20th issues of "Canadian Machinery." Tear off here and paste on your window with a display of Starrett Tools.**

Starrett Combination Set

A Starrett Combination Set is a complete instrument based on the original combination square invented and patented by L. S. Starrett. It combines on one grooved blade or rule three sliding heads as follows: A square, a protractor, and a center head.

Where Used

The tool may be used with any of these heads singly or in combination. It is useful in laying out all kinds of work, especially jigs, dies, etc., and in testing progress as work is done. There is a spirit level in the head of the square and also a scriber for laying out work.

Quality of Graduations

The blades of Starrett Combination Sets are graduated by the special Starrett process, which insures cleaner, sharper, finer graduations than is possible with any other method.

Two Styles

These Combination Sets are made with cast iron heads or drop forged heads, as preferred. The drop forged head is hardened and is more durable but is also more expensive. The graduations on the blade are metric or English, as preferred.

Sizes

The tool is made in the following sizes: 9″, 12″, 18″, and 24″, with prices from $3.75 to $5.75, depending on size and style.

Starrett Tools
The Standard Instruments of Precision

Time to Order

FREEZERS

Whether you stock the LIGHTNING, GEM or BLIZZARD, you get a Freezer that has made good for more than a quarter of a century—one that has won its way into the hearts of the housekeepers by service that satisfies—backed by quality that creates confidence in both merchant and manufacturer—one that's well advertised and in demand — one that brings trade and helps you keep it.

The BLIZZARD, being a low-priced Freezer, makes a good running mate with either the GEM or LIGHTNING. Now is the time to place your order. Shipment can be made any time you specify.

BE SURE to INCLUDE the LIGHTNING ICE CHIPPER No. 1. You can sell one with every Freezer. It chips a block of ice into small uniform pieces in a jiffy, just right to pack closely around the can and shorten the time of freezing. So much easier to make Ice Cream. They help the sale of Freezers.

Your Jobber will Supply You.

"EASTLAKE" Shingles

TINSMITHS:

The way is open for you to beat the wood shingle man. "Do it now."

FOR HOUSES AND BARNS:

The "Eastlake" is the pioneer and most popular metal shingle in Canada.

JUST LET THIS FACT SINK IN AND PROFIT BY IT—

You can to-day buy and lay Galvanized "Eastlake" Shingles on house roofs, ADDING A GOOD ROUND PROFIT, for practically the same money as a carpenter charges for wood shingles. Do you realize what this means? One thing that it means is Thousands of Dollars' profits to Tinsmiths! Will you investigate? Will you write us for proof of our statement? Will you ask us for a supply of advertising literature to help you get your share of these profits?

HERE ARE THE ARGUMENTS: "EASTLAKE" AGAINST WOOD—

First cost practically the same.
Last 3 or 4 times as long.
Fire and spark-proof.
Lightning-proof.
Increases property value.
Reduces insurance rates.
Benefits community by reducing fire hazard. Sheds clean rain-water and more of it. etc.

Don't you think you can beat the wood shingle man with all these arguments in your favor? Do it now! Write at once and get started.

DON'T CARRY A LARGE STOCK

of chain-blocks, as of course you will be obliged to do if you deal in foreign-made blocks.

Be a Morris Dealer and carry just one or two of each size. Our stock of chain-blocks is the biggest in Canada, and every order is shipped the same day we receive instructions.

Some dealers make no attempt to handle chain-blocks, thinking a big stock necessary, and not wishing to be responsible for foreign-made articles.

Morris Chain-Blocks are built and stocked in Toronto and completely satisfy both objections. You should look into this useful addition to your lines. Your customers will make it worth while.

Will Double Your Hack Saw Sales

Every true mechanic will be delighted when you show him this new Hack Saw. For nowhere else will he get the positive pistol grip and full stroke—so necessary for the best work—that are prominent features of this

MILLERS FALLS
STAR HACK SAW No. 1027

The Millers Falls "Pistol Grip" fits any hand without crowding; it allows perfect control always and has the "hang" that gives firmness to the stroke. The handle is vulcanized around a strong steel rib which is bolted to the upper part of the frame.

The thumb screw for tightening blades is placed at inner end of saw so that it offers no obstruction and permits the maximum stroke at all times. Frame may be adjusted to blades from 8 to 12 inches—the strong sheath at the back keeping it rigid at all lengths. Blades may be faced in four directions. Depth between frame and blade is 3½ inches.

Other Millers Falls Quality Tools that Create Demand.

Millers Falls Breast Drill 200, Extension Bit Holder 6, Glass Cutters, Hand Drill 1980 and Star Hack Saw Blades are well advertised and in demand among mechanics everywhere. They bring trade and help you keep it. Send for complete catalog, if you haven't one already.

DANDELION SEASON IS HERE

THE J. D. ALUMINUM RAKE IS HAVING A TREMENDOUS SALE

A new invention. Nothing like it ever shown before. For stripping Dandelion Buds it is unexcelled. Does not allow the dandelion to bloom, hence **no dandelions**, and is a great boon to all who appreciate a beautiful lawn.

MADE IN CANADA

A few reasons for use in selling this rake:

It is a self-cleaning Rake.
Will not injure the lawn as other Rakes do; will pick up matches, peanut shells, cigar and cigarette butts, acorns, pebbles, etc.
Endorsed and used by the City Parks and Garden Departments.
Positively does not injure the crown of grass.
It is not necessary to use a sieve for top dressing this rake will do it.
The only tool made that will grade a lawn.
Made of aluminum—two-thirds lighter than any other rake.

Hangers That Sell More Hangers!

These simple "**20th Century**" **round-track hangers** appeal to the common-sense of your farmer customers who open and close barn doors every day of their lives.

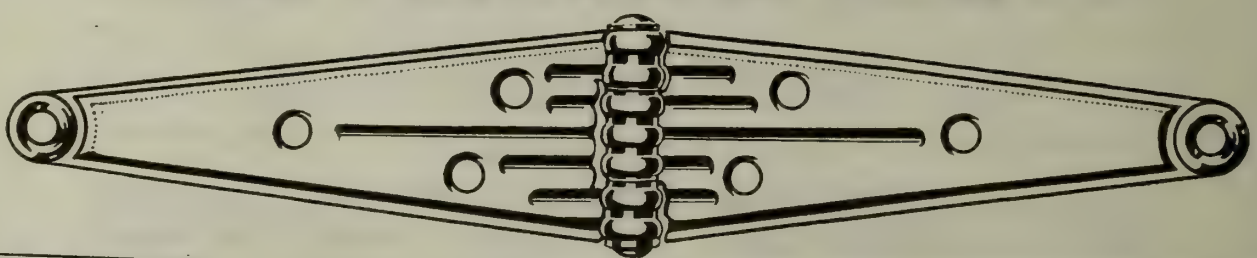
They don't need a brass band speech to tell them **these hangers won't jump the track!!** They can see the **strong projecting, protecting lip.**

The powerful one malleable piece, comprising **frame** and **hood,** holds up the largest, heaviest doors. That means a lot to a barn owner!!

"20th Century" Barn Door Hangers

SMOOTH, QUIET-RUNNING

They just slip along on highly durable Roller Bearings —**without a squeak or a catch.** A slight impulse moves the door. They slide along like a sharp sled rail on slippery January ice—until the door is fully closed or open.



"20th Cen' Track is easy to install—built in 2-foot sections. So crated you can shove 100 feet of Track under the counter, where it will be out of the way.

Retail Merchants at Saskatoon

Second Annual Convention of Saskatchewan Branch R. M. A. Held at Saskatoon — Many Important Problems Discussed.

Views of Saskatoon the Convention City.

THE Second Annual Convention of the Saskatchewan Retail Merchants' Association opened on Tuesday of this week at Saskatoon, Sask. About three hundred members were present. Many important questions were brought up for discussion. On opening day the Resolution Committee was appointed. Addresses of welcome on behalf of the city were delivered by Mayor Harrison, President Murray and other officials. The majority of those in attendance at the convention arrived on Tuesday and were present for the business session early on Wednesday.

At the opening session on Wednesday the report of the Resolutions Committee and other business matters were dealt with. At 1.15 a number of the delegates visited the Quaker Oats mill and from 3 to 6 a business session was held. J. L. S. Hutchinson of the Saskatoon Hardware Co., Provincial Treasurere of the Saskatchewan R. M. A., addressed the meeting on topics of interest appertaining to the work of the Association.

At 7.30 Wednesday evening a banquet was held, at which speeches were delivered by visitors and officers of the Association. Another business session was held on Thursday morning and the annual meeting for the election of officers was held on Thursday afternoon.

The question of the retailers improving their buying powers and their selling organization so as to reduce the cost to the consumer was discussed at considerable length. Co-operative buying on the part of retailers was also gone into, and the convention decided to undertake co-operative buying, but only through local groups.

J. L. S. HUTCHINSON,
Hardware merchant, Saskatoon, Sask.

The mutual fire insurance scheme was also discussed and the convention agreed to put the matter in the hands of J. L. S. Hutchinson and two other members of the Association. If the scheme is put through the Association will not accept policies greater than one thousand in towns and two thousand in cities.

A great many other important matters were dealt with at the convention and a complete report furnished by a member of Hardware and Metal's editorial staff who was present at the convention will appear in next week's issue.

The majority of the retailers attending the convention are quite optimistic regarding the crop prospects and the business outlook for the future. Retailers state that they are paying more attention to buying, selling and credit problems than ever before in the history or the West. Nearly all agree that the business now passing is being conducted on a sound basis and that practically all wild-cat schemes which were so numerous three or four years ago have been eliminated.

View to right of entrance to Fraser Hardware Co. store.

Building to Suit Requirements

Description of the Store Erected by the Fraser Hardware Company, Galt, to Replace One Destroyed by Fire Two Years Ago — Exceptionally Wide Entrance to Store.

ABOUT two years ago the store and hardware stock of the Fraser Hardware Co., Galt, Ont., were destroyed by fire, and the members of the firm were confronted with the problem of erecting a new store suitable for their requirements.

The stock carried by the Fraser Hardware Co. is in some respects different to that of a great many firms, for the Fraser store makes a specialty of catering to the foundry trade—an important class of trade in Galt.

The Fraser business has grown with the city of Galt. The business was founded over 35 years ago by A. C. Fraser, who is still actively engaged. Associated with Mr. Fraser, Sr., is his son R. Fraser. Naturally during the past 35 years or more, the firm has built up a wide business connection. The new store faces on Dickson Street, and the main store covers a lot 40 x 90 feet, with an iron warehouse at the rear measuring 25 x 40 feet.

The basement measures 40 x 90 feet, and the stock room on the second floor is the same size. There is a separate warehouse at the rear of the store for carrying a stock of plaster, oils, cement, wire, gasoline, etc.

One of the accompanying cuts shows the main entrance to the store. This entrance is 40 feet in width, thus permitting space for three large display windows and two separate entrances. The display windows are unusually large and displays are changed weekly. Only recently the firm has started to place price cards, with prices shown in plain figures, on goods in the window and excellent results have been secured in this way. Prismatic glass, over the display windows, throws light to the rear of the store interior.

Two of the accompanying cuts show views of the main store interior. The photographer had some difficulty in taking the photograph with the result that some sections of the shelving and counters are not shown.

Immediately to the left on entering the left hand main entrance doors the sporting goods department is located. Here a representative stock is shown including baseball and football supplies, tennis goods, guns and ammunition, fishing tackle, etc. One silent salesman facing one of the main entrance doors is used for showing sporting goods.

To the rear of the cutlery department and clearly shown in one of the cuts is the paint department. A large section of shelving has been allotted for displaying painting materials.

Moving towards the rear of the store the household goods department is next. A large section of wall shelving is used for displaying enamelware, aluminumware, tinware, etc. Immediately in front of the paint and household goods section a number of tables are used to display seasonable lines of household goods.

Immediately on entering the right hand main entrance door, the customer finds himself in the tool and builders' hardware department where all the goods are neatly displayed in wall cases, silent salesmen and on shelf boxes.

The harvest and garden tool department is located at the rear of the tool

and builders' department and is shown in one of the accompanying cuts. All harvest tools are neatly suspended from large wall brackets.

The office is located in the right hand corner at the rear of the main floor.

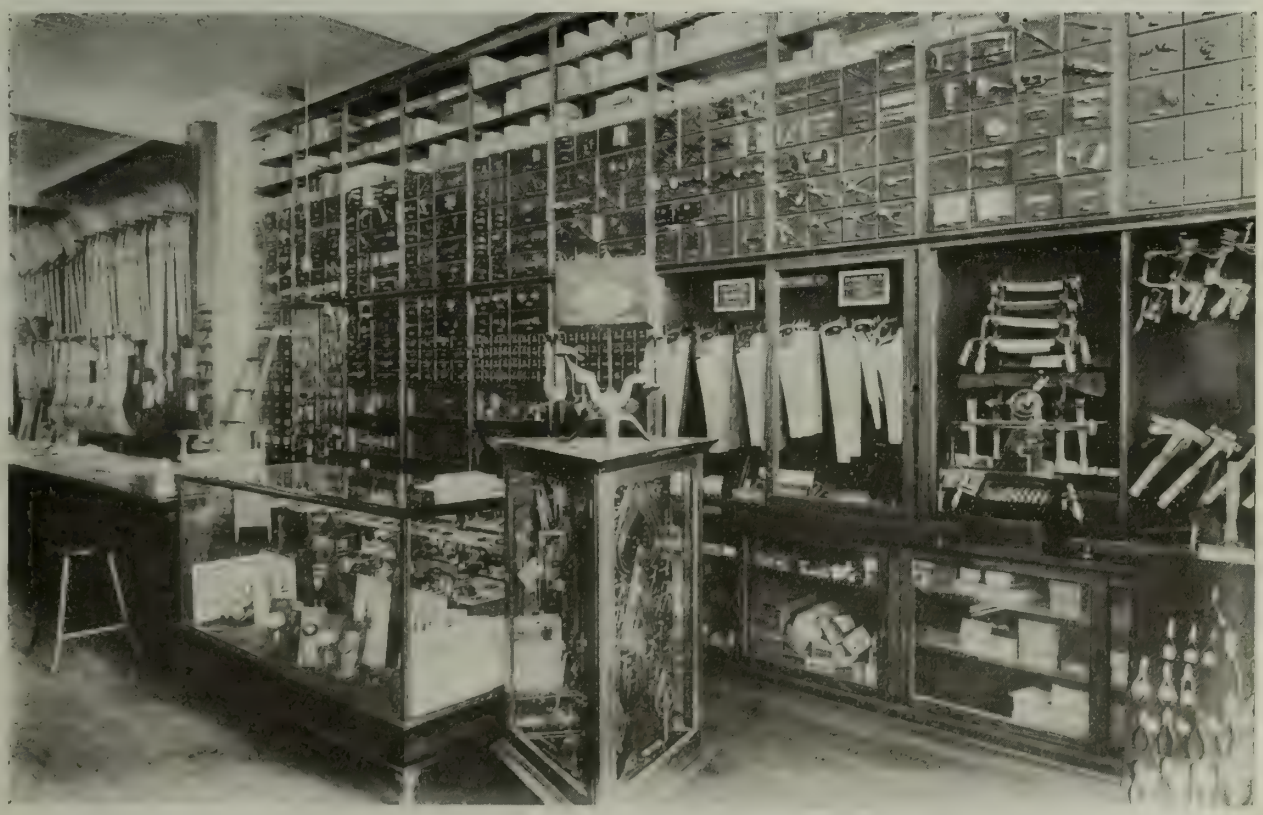
The basement, measuring 40 x 90 feet, is used for stocking glass, building paper, etc., and is large and well lighted.

The second floor, reached either by stair or elevator, also measures 40 ft. x 90 ft. This floor is used for reserve stock, but by far the larger portion is used for stocking foundry and mill supplies of all kinds, including wood split pulleys, leather and rubber belting, bolts, screws, packings, etc.

The iron warehouse and the rear storehouse can be reached by going through a door from the main store or by a rear entrance from a lane.

Among other commendable features in the Fraser store are metallic ceilings, electric drop lights and a large freight elevator at the rear.

In addition to a large mill supply trade the Fraser firm enjoys a good share of city and farm trade.



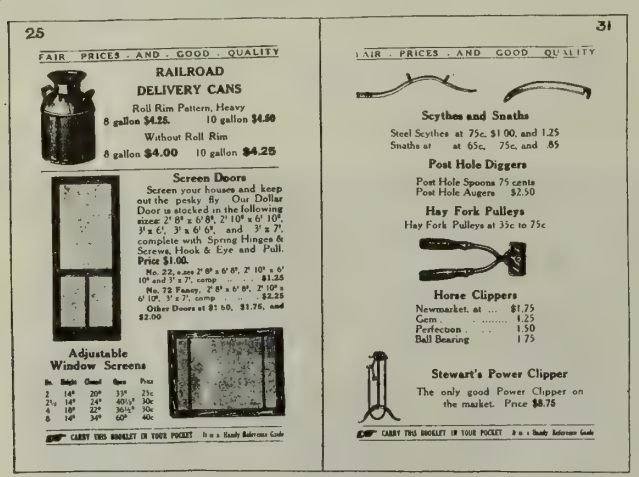
Both a cash and credit business is conducted, although a close watch is kept on credit accounts and undesirable accounts are eliminated as much as possible.

The new store is an exceptionally large and attractive one and although all the details of construction and arrangement of stock which the firm had in view, have not yet been carried out, the visitor can tell at a glance that the store has been carefully planned to meet the requirements of the firm, and to facilitate the rapid handling of merchandise—an important feature in the retail business of to-day.

Main entrance to Fraser Hardware Co. store—width forty feet.

The merchants of Galt report that business generally compares very favorably with last year. A Hardware and Metal representative recently visited a large number of Galt's retail firms, and almost without exception they reported that spring business so far has been highly satisfactory. One hardware merchant stated that sales for March and April exceeded sales of the corresponding months of last year. Both city and farm trade is good. Many of Galt's largest industries have secured huge orders for war materials, and have kept their plants running to capacity. This in turn has had a good effect on the retail trade. A great many large orders for shells are being turned out in Galt factories.

View to right of entrance to Fraser Hardware Co. store.



What Other Hardwaremen Do

ISSUED POCKET CATALOGUE.

M. WEICHEL & Son, Elmira and Waterloo, Ont., have issued a pocket size catalogue of Spring hardware lines. The catalogue, which measures 4 inches x 6 inches, consists of 38 pages. Two of the pages are reproduced herewith. A large number of hardware cuts have been used to illustrate the catalogue. Descriptions and prices are given for each article featured. The introduction on the front page reads as follows: "**A call to spring buyers of Hardware:**

In submitting this little booklet to you we are confident you will find it a handy reference guide to make your spring purchases of hardware, etc., etc. If you intend to build a house or barn, renew your fences, do any painting, or if you are in need of farm or garden tools, you will find it to your advantage to study the goods

and prices contained herein. If you buy an article here and find it in any way unsatisfactory, bring it back and get your money. We don't want your money unless you are satisfied and you have your money's worth. This is not sentiment, it's business. **It pays us to treat you right.**

Five pages in the catalogue are used to feature woven wire fence, poultry fence, lawn fence, gates, plain galvanized wire, coil spring wire, iron posts, poultry netting. Cuts are shown of each kind of fence and descriptions are given together with prices. Among the other lines specially treated in the catalogue are cement, stumping powder, food boilers, iron pipe, paints, stoves, dairy supplies, building materials, belting, ropes and tinware, household goods, lawn mowers, roofing, pumps and dozens of other lines of seasonable spring hardware. One of the pages reproduced here shows screen doors and windows. The other features scythes and snaths, post hole diggers, hay fork pulleys and horse clippers.

HENDERSHOT'S CATALOGUE.

F. E. HENDERSHOT, hardware merchant, Mount Forest, Ont., has issued a 1915 catalogue for distribution to his customers. The catalogue consists of 48 well illustrated pages, and measures 5½ x 8½ inches. Page 27 of the catalogue is reproduced herewith and will give a good idea of how the catalogue is illustrated. The goods featured throughout are lines which should interest townspeople and farmers in an agricultural district. Prices are quoted on nearly all lines. Many catchy phrases appear through the catalogue, some of which are as follows:

"Do Business with People you Know."

"Do not sign paper for Traveling Strangers."

"Purchase in Your Own Town, Then You Can Get the Money Back."

"Cash Buying Means Lower Prices to Our Customers."

"Long Credits Are Costly to You and to Us."

"We Seek Your Business Only on the Basis of Mutual Interest."

"Compare Prices and We Get Your Business."

"Consider Quality When Comparing Prices."

"Customers' Opinions are the Ones That Count."

"A Satisfied Customer is a Source of Steady Profit."

"Comparison is the Only True Test of Value."

"Price is a Good Salesman, But Quality is Better. We Furnish Both."

"Beware Offers of Something for Nothing."

"We Give the Biggest Values That Sound Business Principles Will Permit."

"A Set of Tools is a Good Investment."

"Try a Coal Oil Stove for the Summer."

"Your Money Back if You're Not Satisfied."

The introduction on the front cover of the catalogue reads as follows: "To our Customers,

"In entering the fifth year of our business in Mount Forest, we take pleasure in presenting to you this Catalogue which we trust will serve to bring us closer together in a business way that will be mutually beneficial. This catalogue represents a few of the many lines we have in stock, which is constantly being enlarged and kept up-to-date.

"The publication of this catalogue is with a view to improving the service to the farmers, who we believe will find that it facilitates ordering by rural telephone or mail. All orders received in this way receive our personal attention and are promptly filled.

"The prices given herein are based on present values, which are subject to change from time to time. The war conditions and increases in the tariff may result in some slight advances being necessary, but our customers may rest assured that we will not advance any prices unless compulsory. Before the tariff advance we purchased

heavily in many lines that were affected, and we shall continue to give our patrons the benefit.

"We continue to adhere to our policy of refunding your money for any article which for any reason does not please you when you get it home, providing it is returned within reasonable time and in good condition.

* * *

EARLY MORNING SHOPPING.

CHANGES that make it easier for the merchant to do business are to a very large extent in his own hands. Many merchants did not think there was anything in the Friday bargain day idea when it was first started. Now Friday, once the dullest day in the week, has been turned into the busiest of them all. Along the same lines is the suggestion that it is a wise move to popularize morning shopping. There is a very general tendency on the part of the majority of women to go shopping in the afternoon. This means that the strenuous part of the day comes from two o'clock to closing time. So marked is this tendency that it would be to the advantage of many stores to throw out a suggestion in favor of morning shopping. This is the way one merchant is doing it by means of folders placed in each parcel the store sends out:

"It's worth planning for, to arrange things at home to have the morning hours for the trip down town. We know in some households this is difficult, but you'll find yourself repaid a hundred fold.

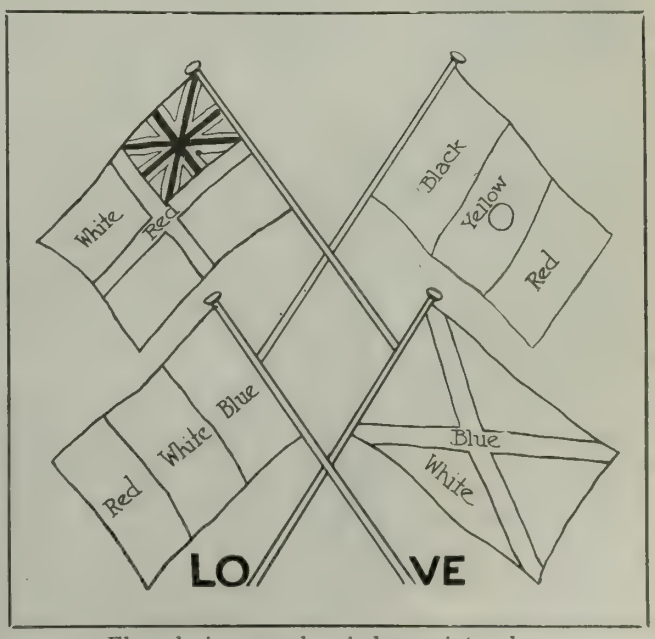
"In the morning hours you'll not be obliged to wait for attention, stocks are in perfect arrangement and there's a freedom of mind in decision when one isn't conscious that everybody is in a hurry.

"Will you help us serve you best—to our satisfaction and to yours?"

* * *

CASH BARGAIN DAY.

IN place of the more usual "Dollar Day" the merchants of Bridgeburg, Ont., decided to call it Cash Bargain Day and 18 out of a possible 23 or 24 co-operated. They used both weekly newspaper advertising and reprints of their ads. sent out by mail or distributed by hand. One merchant declared it was the largest day's business in the history of his store, and generally the day was a great success.



* * *

WAR FLAGS IN DRY COLORS.

THE D. H. DOUGLAS hardware store, Chatham, Ontario, has recently been using in connection with its window displays a very striking and timely device. This is a representation of the war flags of the four allied nations.

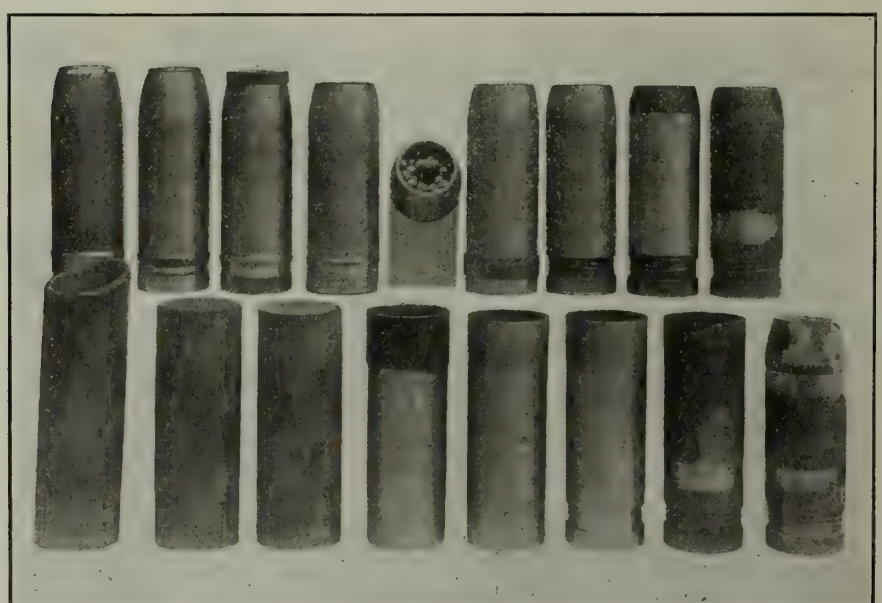
For this purpose a very shallow tray is improvised, standing in the centre of the window in such a position that it slants upward toward the back. The tray is edged and the various flags are outlined with heavy cordage, holding the various colors in place, the flagstaffs being crossed, as shown in the accompanying sketch.

The flags shown are, upper left-hand, British man-of-war; upper right hand, Belgian; lower left, French tricolor; lower right, Russian flag. The colors are red, white, blue, black, yellow and green, the last named being the ground color of the display. The lettering at the bottom of the design is in white. The outlines of the flags, the flag staffs and the outside border, are done in cordage; dry colors are used to fill in.

Flag designs made of dry paint colors.

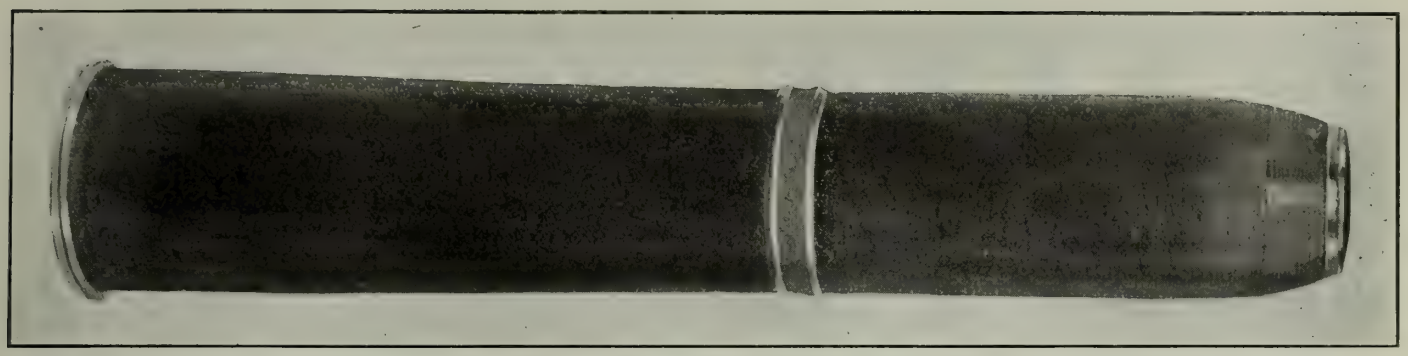
The design makes a striking centrepiece to almost any display and has attracted a great deal of attention. It was first used in connection with a spring paint display.

TOWARDS the middle of last year, Canada, in common with the United States, and, to a certain extent, other countries, was experiencing the reaction due to a long period of prosperity, with its consequent extravagances and more or less wild financial speculation. One after another, factories began to lay off men, work short time, and even shut down. Then in August, like the fates, came the European war to change a condition of tight money and business depression into one of apparent hopelessness.



A more or less panicky situation developed, arising largely from the feeling of uncertainty as to our Empire's preparedness to protect its widespread territory, to maintain the freedom of the seas, to stem the progress of Germany's military machine, and help put a crimp in her long-time-cherished, all-conquering, but otherwise insane ambitions.

It was early noted, however, that, whatever the position from the land or strictly military viewpoint, with regard to sea power and sea control, "Britain rules the Waves," and that although some little time must elapse before the various enemy raiders known to be afloat were driven to neutral ports or "Davy Jones Locker," trade and commerce would suffer otherwise little interruption. Intimation that the rush on Paris by the Huns had been permanently stemmed soon followed and served as it were to complete the assurance that the crisis had passed and that for industrial Canada the future motto would be that of capturing the enemy's trade. Broadcast publicity in the latter direction followed, but whether "what is everybody's business is nobody's business," or otherwise, results were nil, or at best disappointing.



Capturing Enemy Trade.

In this respect Canada was no more guilty of what might be termed a sin of omission than the Old Land or than the United States, and this leads us to remark that, after all, the slogan "capture the enemy's trade," was to a large extent but an expression of our indignation at their procedure, and smacked of school-boy action and retailation. Superlative effort to capture at one swoop enemy trade abroad may be classed in the impossibility category so far as results are concerned, and business men began to realize this even before the warmth of their enthusiasm so kindled had wholly cooled. They realized that doors of opportunity were open which hitherto had not appealed to them with the like insistence and forcefulness, but they further appreciated the fact that the work must needs be one of more or less nursed development. To this end our manufacturers are now applying themselves, and the achievement recorded in the brief space of a few months is satisfactory evidence that if enemy trade is not being captured, it is at least being systematically acquired.

Reference has already been made to our Empire preparedness for war and more particularly war on the gigantic scale on which that now raging is being waged. Our fleet, the men who designed, built, manned, operated and directed it, had been, were and are easily equal to every contingency, humanly speaking, likely to arise. In matters military the position was and has always been different. The maintenance of a standing army running into millions of men of all ranks and services had neither been found desirable nor necessary. In like manner, war munitions were not on tap on a stupendous scale. To meet the unique military situation created by an all-European war the call was made for both men and munitions in number and quantity easily and altogether unprecedented in our Empire history. The munitions of war being the feature with which we are at present dealing more particularly, it is sufficient to remark here that as regards the call for men, the British Isles have done themselves proudly, and, we in Canada, have not only made noble response, but as

Shells in process of making from forging to the product as completed in Canada.

Canadian-made 18-*pounder shrapnel shell and cartridge case.*

recent reports from the front only too plainly indicate, we, through our representatives there, are earning undying fame, the admiration of our friends, and have instilled into the hearts of our enemies the knowledge that we both know and are attending to our business, of whatever its nature may be at any moment.

Canada's Response.

Little did Sir John French realize, when he gave utterance to the for-all-time memorable statement-request, for "shells, and shells, then more shells," in order to prosecute the war to its early and logical end, that Canada would play so important a part in placing these commodities at his disposal.

That our metal working industries have risen to the occasion is amply borne out by the manner in which our peace-time variety-product plants have been transformed into war-time producers of shrapnel and high explosive shells. More or less surprise is, however, being expressed — we should say simulated, rather—that "Canada's Response" has been so universally effective, and not a little credit is being appropriated by our American brethren for the achievement.

It is claimed that for the most part we have in the past been devoid of enterprise, and that our manufacturers doted and were prone to converse on sport and recreation in business hours to an extent highly detrimental to the pursuit of commercial ascendency. In a word, we are reputed to have been conservative, contented and easy going, and the fact that we have broken away from such a condition-combination is being attributed to our sudden acquirement of the business energy of our American cousins.

Business and pleasure mate desirably, and either alone becomes nauseating if practised without intermission. Our manufacturers have, however, realized that, for a period, whole-hearted devotion is meantime necessary to the equipment of their plants and to the establishment of ways and means for smooth running to secure quality and quantity output of shells. They have at the moment no time, it is true, to tell of fishing successes or of the exploits of hunting expeditions, but long before the war is over they will catch many fish, kill many deer, resume their wonted attitude of good fellowship in talking sports and pleasure and, withal, be supplying the Allies from twenty-four-hour-day capacity plants, with shells in number far exceeding present efforts.

Of all the crafts represented in the prosecution of the war, that of engineering in its every aspect is dominant, and it is, therefore, only fair and giving "honor to whom honor is due," to give our metal working plant administrations the fullest degree credit for the native initiative and enterprise which has characterized them at this critical period of our national and Empire history.

General view in the assembling department of a Canadian plant—placing powder cases and tubes, filling with bullets and resin, weighing, etc.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, MAY 15, 1915 No. 20

A GOOD salesman is always attentive to his customer.

MANY A MAN wastes his time telling other people not to waste theirs.

* * *

THE FARMER'S TRADE and the tourists' trade. Two of the best directions for pulling business this summer.

* * *

PUTTING ONE defective article in the window will render ineffective the most elaborate of displays. All goods shown must be perfect.

* * *

MEXICO AND her presidential candidates present the nearest approach to perpetual motion of anything existing at the present time.

* * *

AFTER ALL NOT A SUGGESTION of overcharging or discounting quality has reached the great bulk of our manufacturers of war supplies. And, we believe, it never will. The most—by far—have done their "bit," like the men of Newcastle.

* * *

ONE OF THE greatest needs in the hardware trade, as in nearly every other trade, is the need of thoroughly practical men. To become a good hardwareman, the salesman must study hardware from the ground up. It is not sufficient to master the essentials of salesmanship, to get to know how to meet the customer and close a sale; a practical knowledge of hardware is quite as necessary.

* * *

MISLEADING REPORTS having been circulated in the United States with respect to the admission of tourists into Canada, an official circular has been issued declaring that no passports are required from United States citizens who enter Canada for purposes of pleasure or business. In fact, the tourist regulations remain the same as for several years past. It is expected that many American tourists, who have hitherto spent their vacations on the European continent, will come to Canada this year.

* * *

HOW TO use credit.—The intelligent use of credit eliminates waste and means conservation of resources. For instance, a merchant who is handicapped by being situated in premises that do not permit him to do the volume of business his possibilities assure can who looks good to the bank rather than the man get credit to expand reasonably and that is the man whose poor business methods get him into a tight place and who consequently wants credit to help him to extricate himself.

War Tax---Stock Foods, Etc.

DESPITE the fact that the provisions of the war tax which went into effect on April 15 have been given considerable publicity, it is quite evident from the number of enquiries recently received, that some retailers do not fully understand the requirements of the law regarding the sale of stock foods, etc. We would therefore remind our readers that stock foods, if medicated, and other articles, such as animal regulators, lice killers, heave cure, etc., must have war tax stamps of the requisite value mentioned in the Schedule of the Act, affixed to each package by the dealer, and cancelled, at or before the time of sale to the consumer. Thus it will be necessary for the dealer to attach stamps equivalent to 4% of the selling price of the goods—a dollar package of medicated stock food would require stamps to the value of four cents—a twenty-five cent package requires a one-cent stamp.

Crop Prospects

THE Census and Statistics Office, Ottawa, issued this week, in the form of a press bulletin, the first crop report of the present season. It deals with the area and condition of the fall wheat crop, the condition of hay and clover meadows at the close of the winter and the progress of spring seeding up to the end of April.

The report is a decidedly encouraging one.

Owing to the mild winter and the favorable conditions which prevailed during the critical months of March and April, the fall wheat crop is reported as being exceptionally good on April 30. In Ontario, where 1,043,000 acres were sown as estimated last fall, not more than 6.8 per cent. is reported as winter killed, and in Alberta, with 230,000 acres estimated as sown, the proportion winter killed is only 6.2 per cent. These proportions are lower than in any year since 1908-09 for Ontario and lower than in any previous year on record for Alberta. Last year the percentage winter killed was 19 in Ontario and 15.6 in Alberta. In Ontario the area winter killed amounts this year to 71,000 acres, and in Alberta to 14,300 acres. These figures, deducted from the areas sown, leave 972,000 acres in Ontario and 215,700 acres in Alberta as the areas under fall wheat to be harvested. With 10,900 acres in Manitoba, 4,100 acres in Saskatchewan and 6,000 acres in British Columbia, the total area under fall wheat to be harvested this year amounts to 1,208,700 acres, as compared with 973,300 acres, the area harvested in 1914. Whilst therefore, as previously reported, the area sown to wheat last fall was 9 per cent. more than the

area sown in the fall of 1913, the increased area to be harvested, owing to the small area winter killed, amounts to 24 per cent. Not less satisfactory is the general condition on April 30, which measured by the standard of 100, as representing a full crop, is 93 in Ontario, as compared with 81 last year, and 83 in Alberta, as compared with 87. For Ontario the figure is higher than in any year since 1910 when 95½ was recorded; for Alberta this year's condition was only exceeded last year and in 1911. The condition for the whole of Canada on April 30 was 91 which, converted into a standard of 100 as representing the average condition at the same period for the six years 1909-1914, indicates a condition of 112, or an anticipated yield per acre of 12 per cent. in excess of the average, providing that conditions between now and harvest time are not abnormal.

In hay and clover meadows, as in the case of wheat, the amount of winter killing proved to be unusually small, not more than 10 per cent. being the estimate for all Canada as compared with 14 per cent. last year and 22 per cent. in 1913. The average condition was 91 per cent. of the standard or full crop, as compared with 86.7 per cent. last year (May 6), 89.6 per cent. in 1913 and 74.6 per cent. in 1912.

It is as yet too soon to report on the Maritime provinces, but excellent progress in the seeding of spring grains is reported from all other six provinces. The spring is early, and as a general rule, the conditions for seeding have been most favorable. About double the amount of seeding was accomplished this year on April 30 than was completed on May 6, in 1914.

Five and Ten-Cent Mail Orders.

SOME time ago an announcement was made in Hardware and Metal to the effect that one of the "5 and 10" cent store chains in the United States was contemplating entering the mail order business. The concern has established mail order branches in five American cities, and in its catalogue frankly admits that the parcel post opened the way for a business of this kind.

The catalogue contains 112 pages and is fully illustrated, showing a majority of the items listed, many of the illustrations being in half-tone from photographs of the articles. As a lure to get the customer to make large purchases, the company agrees to send certain articles making up a shipment free of postage. With $2 worth of dry goods, for instance, the postage charges will be prepaid in territory embracing most of the middle central States. Orders of glassware, tinware, stationery and kindred articles will not be delivered free, however.

On an order amounting to $10, half of which is dry goods, the Company will prepay all delivery charges. In addition to this concession, the company also uses a premium bait to increase its list of customers, offering a set of six teaspoons to anyone ordering $1 worth of goods and inducing three friends to order the same amount, sending in the $4 at one time.

This is the latest development in the mail order field.

Treatment of Catalogues

ON several occasions in the past, retail merchants have vigorously objected to the action of some postmasters who complied with a request which often appeared on the wrappers of mail order catalogues. Retailers have their own troubles in fighting the mail order houses and do not like the idea of the mail order houses securing assistance from local postmasters. The Canadian official postal guide, issued by the post office department, in a recent issue, under the title "Treatment of catalogues, etc., which cannot be delivered to addresses," gave instructions which will no doubt meet with the approval of the retail trade generally. The instructions are as follows:

"The attention of the department has been drawn to the following request printed on envelopes containing catalogues mailed by a business firm:—

"If this catalogue is not called for in thirty days, kindly hand it to someone else who is in the habit of buying by mail, and who you think would be interested in us. When this is done, always return the empty envelope to us so that we can revise our mailing list."

"It is believed that to allow this request to be complied with would lead to great abuses in connection with the delivery of mail matter, as the regulations strictly forbid the delivery of an article of mail matter to any person other than the addressee, and Postmasters are accordingly instructed to ignore any request of this character, and to treat the matter bearing such a request in the regular manner prescribed by the Postal regulations."

Merchants and Farmers Co-operating

INSTEAD of there being enmity existing between farmers' clubs in Canada and the retail merchants, there should be co-operation in every community to assist in the building up of that community. It should be clearly understood that the merchants have no criticism whatever to offer to farmers uniting together for the purpose of discussing better farming methods, for getting better prices for their products and for social purposes. Merchants everywhere will encourage this. But they are opposed firmly to farmers uniting to purchase their goods direct.

In the State of Oregon, there was recently held in one of the counties, a meeting which was engineered chiefly by merchants to get the farmers to form a club. The merchants of the town used a great deal of their advertising space in the local papers to call attention to the time and place of meeting, as well as the programme for the day. The merchants also announced that they would close their places of business from 12 to 1.30 p.m. and help wait on tables at the free dinner to be given by the Retail Merchants' Association to all farmers and their wives attending the meeting. In addition to the speakers, the Retail Merchants' Association had provided an orchestra and band music for the occasion. As a result of this interest shown by the business men and their active advertising campaigns an enthusiastic meeting was held attended by nearly 700 persons.

Although it does not say so in the report that has come to hand of this meeting, it is to be taken for granted that the farmers were organizing their club to assist them in becoming better tillers of the soil and to give them an opportunity to get together occasionally and learn one another's ideas and methods. The co-operation which the Retail Merchants' Association gave the farmers is certainly to be commended. Probably it would be a good idea for merchants in the various communities to organize something somewhat similar which would cement the relationships between the farmers and themselves.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—Britain Controls Copper Output — The Appeal for Razors for the Army.

Britain Controls Copper Output.

From Canadian Mining Journal.

THE announcement that Great Britain is now in control of the world's copper supply, outside of Germany, is a source of great satisfaction. The enemy has been for years a large consumer of copper and has been unable to produce enough for its own use. For war purposes much larger quantities than before are needed and the Germans have made every effort to obtain supplies. That the British blockade is effective is clearly disclosed by the announcement that even those American companies controlled by Germans have entered into the agreement to put their output under British control.

The significance of this announcement cannot be overestimated. It shows clearly that the War Office officials responsible for the control of the supply of metals are capable of doing things which few men would have thought possible. While some of our newspapers have been at great pains to tell the Government how the nickel output should be controlled, the War Office has been quietly obtaining control of the supply of copper. Comparatively the control of nickel is a very simple matter. The control passed into the British hands practically with the opening of the war. But while most of the nickel comes from a few mines in Canada, copper is produced in large quantities in many parts of the world. That all producers have been satisfactorily dealt with by the British Government speaks volumes for the effectiveness of the blockade, for the magnitude of Kitchener's plans and for Britain's determination to push the war to a victorious conclusion.

The Appeal for Razors for the Army

Fromthe Ironmonger.

AS the result of the appeal to the public by the Master Cutler of Sheffield for second-hand razors for the troops (the manufacturers being unable to meet the immediate demand) over 35,000 razors have been received. Although most of them had been used, they were in good condition. More than three-fourths of the number only needed to be whetted, and these were put in perfect working order at an average cost of a fraction under twopence each. The remainder had to be more or less reground, and regrinding is a more expensive process than whetting. The appeal was taken up with much enthusiasm in some parts of the country. Large business houses organized collections of razors from customers and other business acquaintances.

Getting Paint Into Current Literature

From American Paint and Oil Dealer.

THE feature writers, whose copyrighted matter is "syndicated" throughout the daily press of the nation, are beginning to recognize paint at its true value. Walt Mason, the practical poetaster, of Kansas, has published his "Clean-Up and Paint-Up" rhymes from coast to coast this spring; Robertus Love, the altruistic idealist who graduated from a New Jersey country paper to reach a bigger constituency at the behest of his newspaper friends who wanted his "feature stuff" regularly, is persistently linking "Self Respect and Paint"; and now comes Dr. Frank Crane, who in a recent article, published in several hundred leading dailies, entitles himself, and his article, "The House Doctor," and urges people who are looking for a house or flat to see to it that it is cleaned up and painted up. And he tells why, and specifies the items, and concludes with this injunction:

"Take with you into your new abode The Three Life-Preservers—Carbolic Acid, Soap, and Paint."

Good Business at St. John

From St. John Board of Trade Report.

ST. John, N.B., May 10, 1915.—The port business for the month of April just ended was the best in the history of St. John. During the month, 32 ocean steamers, of a tonnage of 111,576 tons arrived, as against 20 steamers, of a tonnage of 77,716 tons in April, 1914. The wharfage returns collected by the city from these vessels were $4,200 in excess of the same month last year. Already, the returns for May are ahead of those of last year. The outlook for the summer, from a shipping point of view, is very bright, as in addition to steam vessels, many sailing vessels have been chartered to carry forward lumber cargoes. The result of the past season's business has been to further demonstrate the supremacy of St. John as the winter freight port of Canada. The Canadian Pacific Railway Company managers are already laying plans for an increased business next year, being greatly pleased with this season's results.

The Sisal Fibre Situation

From Cordage Trade Journal.

CORDAGE manufacturers in the United States have been agreeably surprised by the rapidity with which normal conditions regarding the shipment of Sisal Fibre have been restored at the port of Progreso, Yucatan. Splendid work has been done during the last five weeks, and the shipments during that period almost constitute a record. They aggregate 117,963 bales, while the record for any month in the history of the industry stands at 118,803 bales, which was established in November, 1913. Last week the shipments amounted to 28,072 bales, probably a record in itself. Receipts last week were large, too, amounting to 23,838 bales, which is well above the weekly average of 17,990 bales last year.

Owing to the conditions which have prevailed in Yucatan the regular weekly statistics were not received after February 6 until the middle of April. They are now being received.

Although the stock in Progreso has been heavily drawn on during the last few weeks, the stock of 58,959 bales on May 1 is much greater than was the stock on May 2, 1914, when it amounted to only 42,650 bales.

Practical Course for Sheet Metal Workers

Article No. 30 of Series

By CHARLES SEIVERS

IN this article is shown in the method to adopt in the cutting of pattern for an angle mitre and a butt mitre. Fig. 1, A-B-C-D, shows a plan of window or wall with moulding around same. At section is shown a full size of moulding or cornice; it will be required to cut the mitre for B or C and at A or D.

At Fig. 2 is shown at A-B-C-D a plan of the butt mitre at A or D, and at E-F-G-H is shown a plan of the mitre at B or C.

Mark off on this plan a profile or section of moulding shown at Fig. 1, keeping line marked wall line on the inner line of plan—that is, B-C or E-G.

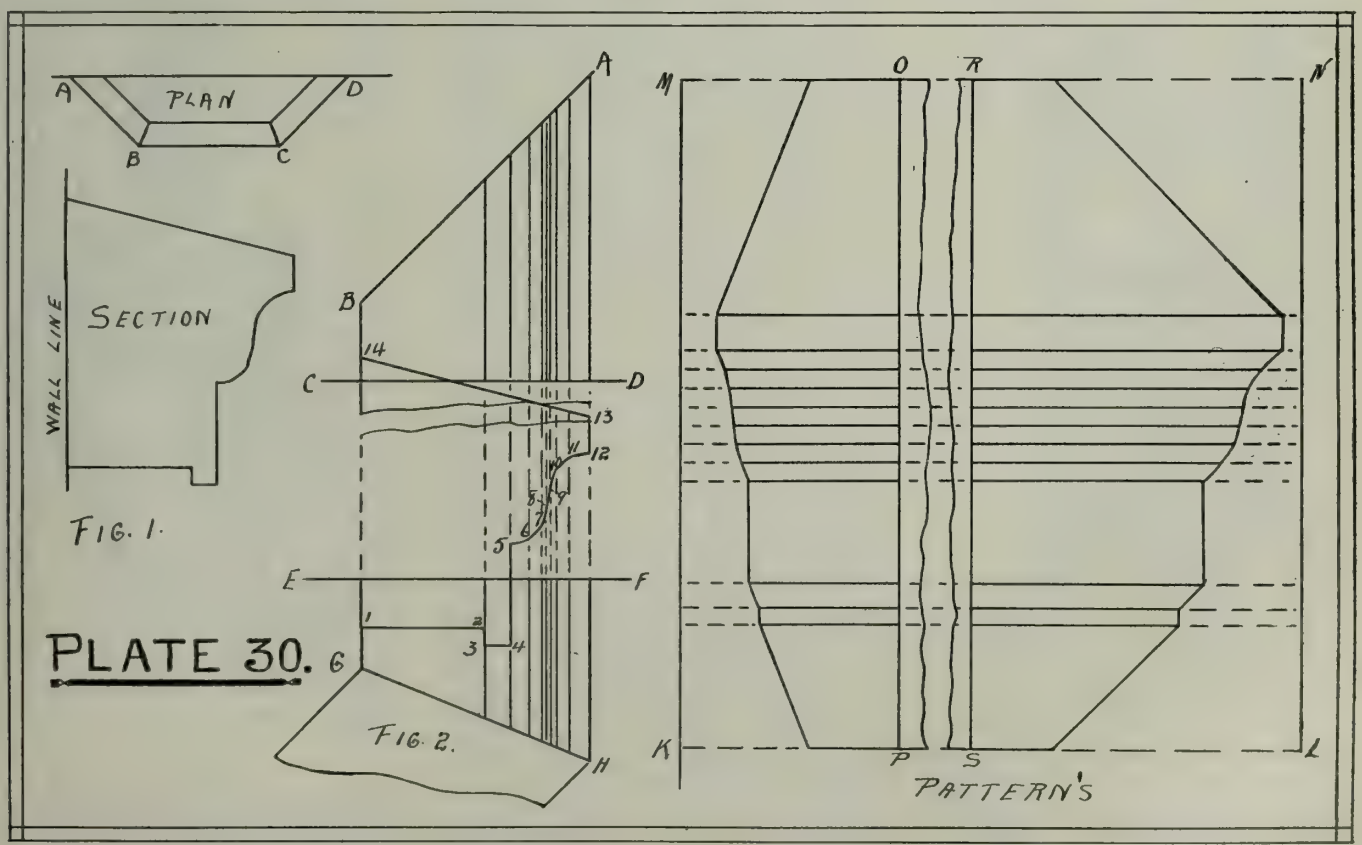
Having done this, divide the curved sections of moulding into a number of equal parts, and from the angle of each plain or straight member of moulding and each section of curved member run lines parallel to B-C and A-H, extending them until they intersect mitre lines A-B and G-H.

To lay out pattern, draw a line as at K-L, and on its two ends erect lines, as K-M and L-N. On these lines, K-M and L-N, set off the spaces on section, as shown by 1-2-3-4-5, etc. When these lines have been set off, draw lines connecting points, 1-1, 2-2, etc.

At a convenient distance from K-M draw a line parallel to K-M, as shown by O-P. The line O-P must be used to set off distances from. Obtain these distances by measuring from line E-F, at Fig. 2, to the mitre line G-H, the distance on line drawn through point 1 being set off on line 1 at stretchout, from point 2 on line 2 on stretchout, and repeating on all remaining lines in a similar manner.

The accompanying article is No. 30 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

When one line passes through two points, as 2 and 3 and 4 and 5, the distance from line E-F to mitre line is the same for both points.



When all are measured and set off on stretchout, a line drawn through points obtained will give outline of pattern for mitre on line G-H, at Fig. 2, or at B or C, at plan in Fig. 1.

The other pattern is developed in same manner, measuring from line C-D to mitre line A-B, and setting off from line R-S on stretchout.

It will, of course, be seen by our readers that any form of moulding may be developed by adopting these instructions in a general way. It does not follow that each moulding requires a different method; the principles are the same.

(Continued in next issue.)

If you have plenty of enthusiasm you won't have to be urged to hustle.

Junior Clerk's Page

THE BORDERLAND.

A FEW years ago it occurred to a few thinking men and women that the thing we know least about is the culture and development of the mind. Tree planting, fruit raising and the study of the stars have been given serious study since Aryabkata sent from his observatory on the banks of the Ganges the truth that the earth is but "a grain of sand on the infinite shore of the universe."

Luther Burbank, in his home and gardens in California, has recently discovered some wonderful secrets about changing common weeds into beautiful flowers, about growing highly flavored and delicious fruit on the sand cactus, about developing poisonous vegetable parasites into daisies, roses or lilies—depending on the nature of the weed.

A few years ago we knew nothing about electricity. The lightning's flash was as great a mystery to us only a century or so ago as it was to the savage warrior who wandered across the plains in the first dim light of the intellect of man. To-day electricity is lighting cities, driving trains at ninety miles an hour, pumping water, turning machinery, and sending the world on toward greater things at a speed unguessed and undreamed even by the prophets and soothsayers of yesterday.

But it does not require a "crystal gazer" to see approaching discoveries in the study of a peculiar and mysterious form of energy. **We call this form of energy the mind, or the power of thought**—and what is the secret of Burbank's discoveries, Edison's inventions, the secret of the telephone, the secret of the reaper, the dynamo, the secret of the electrically driven car, but a form of energy that existed first as the power of thought?

We have learned in the last few years that a criminal is a man whose memory, imagination and ideals were arrested at an early period of life; a man who ceased to grow, a man whose mind for some reason went into bankruptcy. We have learned recently from Binet, a French philosopher and scientist, that the minds of many men at forty are developed but little more than that of the child.

If we have learned that the arrested development of the mind produces the criminal, and that the super-development of a certain part of the brain has produced the street car, electric light and the dynamo—then it occurs to us naturally that there is a great secret—an all-pervading law—which we are about to discover—the secret of developing the mind of man. This idea or this universal truth is knocking at the door of our intelligence on every hand; at almost every hour some glimpse of what is going on behind the shifting scene, comes to us like lightning's flash out of the midnight storm.

We are developing the well rounded man—a product the world has never seen until the present century. The world has been filled with freaks—men who knew music and nothing else; men who could write poetry and could not make a living; men who composed for the harp and the zither—who wore long hair, lived the lives of vagabonds and died in poverty. But the well rounded man, the man of dignity, the man of poise, the man who discovers a secret passage—a new door to a new realm of thought almost every day—is distinctly a product of a new age.

The next fifty years will be a trip into the infinite, into the unexplored—into the unknown. We are learning how to raise children—how to develop them mentally and physically; we are learning how to grow plants and flowers, and we are learning to think swifter and surer.

The mind is a form of energy. Energy is everywhere in the universe. It is a thing that underlies all substance—is behind all substance—and the most powerful form of energy known to this or any other planet, is mind. The time is not far distant when we will know the secret of developing the mind.

Just as the secret of electricity was stolen from the sky with a key, just as Burbank found a golden thread of natural law leading from the weed to a flower, just as Marconi discovered that a strata or air would carry an electrically-driven message from a lighthouse off the coast of Newfoundland to the Tower of Pisa—so will we one day find the secret through which we can scientifically and systematically develop the mind of man with the same degree of accuracy, certainty and precision with which we are now directing these other forms of universal energy.

"I'M A MERCHANT."

On the way home from Barrie, the Grand Trunk train stops at a small village, conspicuous at first glance chiefly by its almost total absence until the casual glance out of the window rests upon a huge sign on the side of a store bearing the legend, "I'm a merchant." From the train the front of the store cannot be seen, just the bare side, relieved only by that big sign saying, "I'm a merchant." It's a fine pastime to speculate on the probable qualities of those whom one has never seen but whose nature is seemingly revealed by just such a kink as this.

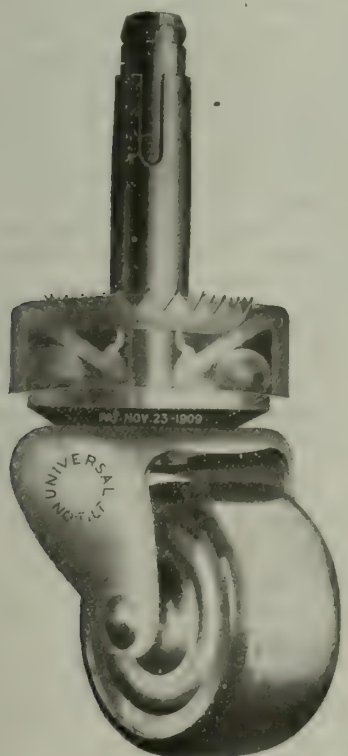
On this particular occasion those who occupied the smoking compartment immediately got busy giving their individual ideas on the character of the merchant who advertised himself so ingeniously.

"If I'm not mistaken," said one traveler, "that man is wasting himself in this neck of the woods. Anybody that can distinguish the difference between being a storekeeper and a merchant like that fellow does should have a bigger scope for his activities. The fact that he knows he is a merchant makes it clear his mind hasn't run in one groove all his life."

"I happen to know something about that man," spoke up another man, "and his sign isn't any bluff. He handles almost everything one can think of in that store, and he is famous the country round for his up-to-date methods. He draws trade for miles around and perhaps in that little store manages to bank away considerably more profits than dozens of others who are working on a scale much greater in size."

"It would be a mighty good thing for a good many retailers if they could hoist a sign with a motto such as that written on it and could live up to all that it means."

Many incomes may be augmented by cultivating the back yard. A penny saved is a penny earned.



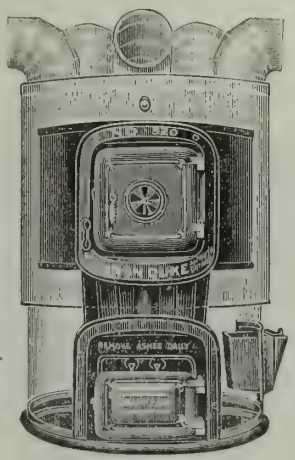
New Hardware Goods

Offered Canadian Hardwaremen

NO TILT CASTER.

Universal Caster & Foundry Co., 29 West 42nd St., New York, N.Y., have recently placed on the market the Universal "No-Tilt" Ball Bearing Adjustable Caster here illustrated. The makers state that the Universal "No-Tilt" caster is Self-Adjusting. That is to say, when the furniture is moved over a floor that is not level, the ball bearings in the caster move up or down automatically and adjust themselves—assuring an even surface on the furniture, and making tilting or tipping impossible. Whether the floor is perfectly level or not the caster readily revolves smoothly and easily.

The caster is Dust-Proof. The working parts and ball bearings are carefully enclosed in a steel cap preventing dust or other obstructions from clogging the bearings.



Universal "No Tilt" Ball-Bearing Caster.

The Universal "No-Tilt" caster is also equipped with 7/32" case-hardened steel balls and in six distinct sizes.

IRON DUKE FURNACE.

Kir-Ben, Ltd., Almonte, Canada, have recently perfected and are now offering to the trade the Iron Duke furnace, here illustrated. This furnace is said by the makers to appeal to dealers who believe in warm air heating on account of its

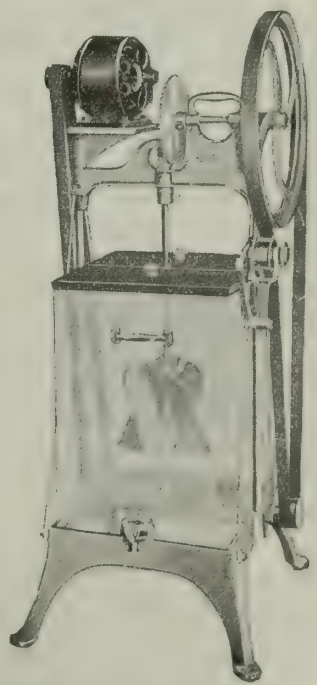
Iron Duke Furnace.

merits rather than its price. The furnace is made with as few joints as possible, and all of the joints are of a deep cup style, which, when properly packed and cemented, are said to be absolutely gas and dust-tight, and also allow for expansion and contraction.

The castings are moulded by the aluminum match-plate process, thus insuring accurate fitting in all parts. The steel radiators are unusually high, and are made with extra heavy steel dome and flue, which are fitted into cup joints on the cast iron bottom and top of radiator; these joints are packed with asbestos cement. The radiator is bolted together with heavy steel rods placed on the outside of the flue, so that they do not come in contact with the products of combustion, and are not subject to any expansion, forming an absolutely gas-tight radiator.

The fire pot is made with large and heavy cast iron wings or flanges. It is made in two sections, is extra heavy and almost perpendicular, allowing for a large grate surface, preventing the ashes from banking up on the sides, and insuring a clean fire and increased radiating power.

The grate bars are of the triangular revolving pattern, and are heavy and substantial. Feed-door frames are provided with two openings, so that pipe water coil for heating kitchen boiler can be fitted up in the furnace without drilling castings or cutting the casing. The wood grate is so arranged that it easily enters through the fire door and drops into place on the coal grates. The furnace is made in three sizes—Nos. 518, 520, 522.



Catalogue will be mailed on request.

NEW DAZEY CHURNS.

The Dazey Churn & Mfg. Co., of St. Louis, Mo., are placing on the market a number of sizes of power-driven Dazey churns.

The accompanying illustration shows their No. 4 P. 16 gallon power churn, driven in connection with a one-sixth horse-power motor.

The countershaft in the base and speed control on frame can be quickly attached to their regular stock No. 4 hand churn.

Dazey Power Churn No. 4 P.

Other sizes are of 6 and 28 gallons capacities.

These churns can also be run with gasoline motor or water power

Current News

Readers are requested to send in, for publication on this page, news items of interest to the trade.

New Firms.

Brockville, Ont.—Sheridan & Power stores, etc., have opened a store at Ottawa.

Fire Losses.

Three Rivers, Que.—The hardware store of Cyrille, Labelle & Co. was destroyed by fire.

Toronto Visitor.

J. H. Cameron, of the Winchester Repeating Arms Co., New Haven, Conn., was a visitor at the Toronto office of Hardware and Metal this week.

Moves to Guelph.

Guelph, Ont.—Thos. Houghton, who recently sold his hardware business at Parkhill, Ont., has moved to Guelph, Ont., and is now associated with Reg. Scott in the Blu-Scott Hardware.

Winnipeg Notes.

Winnipeg, Man.—Mr. Thompson, manager of the Owen Sound Wire Fence Co., has been in Winnipeg for two or three days this week.

Business Changes.

Toronto, Ont.—Batty Bros., hardware, have sold out to S. E. Jeffrey.

Winnipeg, Man. — McGavin-Lennox Hardware Co. are discontinuing.

Milden, Sask.—F. L. Gimby, hardware merchant, has sold out to L. H. Cowell.

Parkhill, Ont.—Thos. Houghton has sold his hardware business to Linderfeld Bros.

Antler, Sask.—W. R. Merril & Co., have dissolved. W. R. Merril continuing.

Regina, Sask.—It is reported that Peart Bros.' Hardware Co. are discontinuing their branch at Moose Jaw.

Montreal, Que.—George Constant, 10 Jacques Cartier street, Montreal, has been succeeded by Romeo Del Vecchio.

Obituary.

Montreal, Que.—Godfrey Scott Pelton, head of the firm of Godfrey Pelton & Son, Montreal, died on Tuesday, May 4. He commenced in the hardware business with Crathern & Caverhill, and remained with them for a quarter of a century. He then became a member of the firm of Watson & Pelton. He retired from business 18 months ago, and at the time of his death was 66 years of age.

Appointed Secretary.

Dugald Campbell has been appointed secretary of the Dominion Commercial Travelers' Association in succession to the late H. W. Wadsworth.

Montreal News.

The business of P. L. Schmidt Hardware, Ltd., 240 Lemoine Street, Montreal, importers, is now being carried on by Hardware, Ltd., at the same address.

F. Orr Lewis, president of the Canadian Vickers, Limited, Montreal, who was on the Lusitania, and was rescued after being in the water some time, was the founder of the well-known wholesale hardware establishment, Lewis Bros., Limited, Montreal. He began in the hardware store of J. Muckleston & Co., Kingston, Ont., later starting up in business for himself in Kingston in 1888, later moving the business to Montreal under the name of Lewis Bros.

Fire destroyed the Lajoie Block at Three Rivers, Que., on Sunday last, the damage amounting to $25,000. Among the stores burned was that of Cyrille, Labelle & Co.

Ontario Incorporations.

Hamilton Lock Nut & Specialty Mfg. Co., Ltd., capitalized at $500,000, head office, Hamilton, Ont., to manufacture and deal in hardware, sheet metal, screws, bolts, tools and hardware specialties, etc.

Safety Window Company, Ltd., capitalized at $100,000, head office Toronto, to make and deal in safety window sashes, screens, etc.

Dominion Incorporations.

The Canadian Drill & Chuck Co., Ltd., capitalized at $20,000, head office, Toronto, to manufacture and deal in all kinds of machinery, tools, implements, etc.

The Queen City Oil Co., Ltd., capitalized at $50,000, head office, Toronto.

Standard Primer & Fuse Company, Limited, capitalized at $150,000, head office, Toronto, to carry on business as manufacturers and dealers in time and percussion fuses, detonators, and primers, fire-proofing, heating and electric material, appliances and equipment, etc.

Canada Ingot Iron Co., Ltd., capitalized at $20,000, head office, Guelph, to manufacture and sell culverts, tile, pipe, etc., iron and steel sheets, etc.

The Columbia Handle & Lumber Co., Ltd., to acquire and take over the business heretofore carried on at the city of London, by the Columbia Handle & Lumber Co., as co-partners. The company is capitalized at $100,000, with head office at London, Ont.

Catalogues Wanted.

In a letter to Hardware and Metal, F. C. Bishop, hardware merchant, Norwich, Ont., states that in the recent fire which destroyed his store and stock, all catalogues and price lists were destroyed. Mr. Bishop would like to receive catalogues from manufacturers and wholesalers.

Seventy-five Years in Business.

The Carpenter-Morton Company, Boston, Mass., importers, manufacturers and wholesalers of paints, varnishes and paint specialties, are sending out invitations to members of their company and present and old employees and their families to join with them in celebrating the completion of seventy-five years of successful business life. This anniversary celebration will be held at the Riverside Recreation Grounds, Riverside, Mass., Saturday, June 12th.

Carpenter-Morton Company is one of the few business houses that can point to a record of seventy-five years of continuous business success.

This house was established in 1840 by Eleazer F. Pratt.

The present officers of the corporation are: James B. Lord, president; Frederic H. Newton, vice-president; George C. Morton, treasurer; M. Elton Vose, assistant treasurer and clerk. These officers, together with J. W. Campbell and M. E. Morton, constitute the Board of Directors.

The factory is located at Everett, Mass., and the employees number 100.

During the last twenty years the company has largely expanded its business in paint specialties. These specialties are known all over the United States and in foreign countries, and comprise Campbell's varnish stains, for staining and finishing furniture, floors and interior woodwork; colorite, a preparation for coloring straw hats and straw goods; cow-ease, a preparation for spraying cattle and horses, and other specialties.

HARDWARE LETTER BOX

Wooden Lawn Hose Reels.

R. T. Holman, Ltd., Summerside, P. E. I.—"Kindly let us have a list of the manufacturers of wooden Lawn Hose Reels."

John Watson Mfg. Co., Ayr, Ont.; Clearfield Woodenware Co., Clearfield, Pa.; Aten Lumber & Mfg. Co., Monroville, Ohio; Millett & Freres, Lawrenceville, Que.—Editor.

The Collins Sprayer.

John H. Glover, Aylmer, Ont.—"Will you kindly advise us where the Collins Sprayers are made."

The Collins Mfg. Co., 425 Symington Ave., Toronto.—Editor.

Electric Elevators.

H. Lendon, Leamington, Ont.—"Please be good enough to inform me through Hardware and Metal, who in Canada make Electric Elevators."

The John McDougall Co., Montreal, Que.; Otis-Fensom Elevator Co., Ltd., Toronto, Ont.; Turnbull Elevator Mfg. Co., Toronto, Ont.; Darling Bros, Limited, Montreal and Toronto; Roelof Elevator Works, Galt, Ont.; A. B. See Elevator Co., Montreal, Que.—Editor.

Glue Manufacturers.

Saskatoon Hardware Co., Ltd., Saskatoon, Sask.—"Will you kindly give us the names of Glue Manufacturers."

G. F. Stephens & Co., Ltd., Winnipeg, Man.; Canada Glue Co., Ltd., Brantford, Ont.; Canadian Linderman Co., Ltd., Woodstock, Ont.; Carter's Ink Co., Montreal, Que.; Gilmour Bros. & Co., Montreal, Que.; W. Harris & Co. Toronto, Ont.; Maritime Fish Corp., Ltd., Montreal, Que.; Berlin Glue Works, Berlin, Ont.; Russia Cement Co., St. John, N.B.; The Masse Industrial Co., Windsor, Ont.—Editor.

Aluminum Cooking Ware.

Thompson & Sutherland, Ltd., New Glasgow, N.S.—"We would be obliged if you would kindly give us the addresses of manufacturers of Aluminum Cooking Ware."

Northern Aluminum Co., Toronto, Ont.; Ware Mfg. Co., Oakville, Ont.; Sheet Metal Products Co., Ltd., Toronto, Ont.; Hudson Bros., 86 Symington Ave., Toronto, Ont.; McClary Mfg. Co., London, Ont.; Buckeye Aluminum Co., Woosten, Ohio; Griswold Mfg. Co., Erie, Pa.; Stover Mfg. Co., Arcade, Ill.; Thos. Davidson Mfg. Co., Ltd., Montreal, Que. —Editor.

Smokeless Powder.

Gurney Foundry Co., Ltd., Toronto, Ont.—"Can you give us the names of manufacturers of Smokeless Powder?"

Canadian Explosives, Limited, Montreal, Que.; Du Pont Powder Co., Wilmington, Del.; Hercules Powder Co., Wilmington, Del.; Robin Hood Ammunition Co., Swanton, Vt.—Editor.

The Sweeper Vac.

R. A. Wells, Dresden, Ont.—Kindly furnish me with the name of the manufacturer of the Sweeper Vac.

Sweeper Vac, Ltd., Montreal.—Ed.

Late Albert A. Ayres.

Ottawa, Ont.—It was with great regret among a wide circle of friends and acquaintances that news was received of the death of Albert A. Ayres. Mr. Ayres was enjoying the best of health previous to an operation for appendicitis from which he failed to rally.

LATE ALBERT A. AYRES.

The late Mr. Ayres was born in Montreal in 1886, and shortly after removed to Toronto with his parents, his father being superintendent of the varnish factory of the Canada Paint Company. On his father's retirement, Mr. Ayres succeeded him and was for a time in charge of the same factory. Three years ago he came to Ottawa and with J. M. Young and Charles Hickman organized the Ottawa Varnish Company, Limited, and at the time of his demise was president and general manager of this firm.

The late Mr. Ayres had exceptional ability as a varnish maker as was exemplified by the consummate success of the firm in which he was the mainspring.

A. J. Ayres, father of the deceased, returned from the West to attend his son's funeral and at present is residing in Ottawa. The many friends of father and son will be glad to learn that Mr. Ayres, senior, is taking up his son's interests and duties as general manager of the Ottawa Varnish Company, Limited.

Advertising Clubs at Chicago.

Chicago will be the scene of the eleventh annual convention of the Associated Advertising Clubs of the World, which meets June 20 to 24. This great gathering of the dynamos of the business world to discuss common problems and to advance the banner of truth in advertising promises to hold a unique place in the events of the year.

President Wilson (war conditions permitting) will head the list of speakers. Hon. William Jennings Bryan, John H. Fahey, president of the Chamber of Commerce of the United States; Henry Watterson, George Horace Lorimer, editor of the Saturday Evening Post; and Arthur Brisbane are among others of national prominence who are to address the sessions. On the Sunday preceding the formal opening of the convention fifty business men of country-wide reputation will deliver lay sermons in Chicago churches.

CATALOGUES AND BOOKLETS.

Steel Wire List.

W. N. Brunton & Son, steel wire manufacturers, Musselburgh, Scotland, have issued a new steel wire list for steel wires, hardening and tempering. Copies will be mailed on request.

Sporting Goods Catalogue.

Exceedingly attractive from a typographical point of view is the spring and summer sporting goods catalogue No. 15 just issued by Wood, Vallance, Ltd., of Winnipeg. It is very conveniently arranged from the retailer's standpoint, the index making it possible to refer to the various lines about which information is wanted without loss of time. Each department is splendidly illustrated, complete information being given about every article. Baseball goods, tennis goods, fish tackle, of all kinds are shown, also footballs, dog collars, flash lamps, batteries, etc. In this catalogue are one or two departments not always touched in such a work. A full line of lawn bowls for instance are shown. Golf clubs, caddy bags, golf balls are also illustrated, the information being so complete that customers would be able to buy from the catalogue, if the hardwareman's stock were not complete. Tents, kerosene stoves and other supplies are also dealt with. Rifles and shot guns are shown, though not to as great an extent as would probably be the case with a fall sporting goods catalogue. The whole 86 pages will be full of interest to hardware dealers.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

The fine weather of the past week has had a stimulating effect on trade and the demand for seasonable goods has improved considerably. City trade is still below normal, but country trade is holding up well. The advances in galvanized ware predicted by Hardware and Metal last week have gone into effect. The advance amounts to about 10% and is due largely to the high price and scarcity of spelter. Copper wares have also advanced as predicted. The tack list has been revised. In metals there is quite a demand for spelter, copper and lead for munitions of war, but general domestic business is very quiet and the continued high prices have had a tendency to throttle business. Stocks are fairly light. Spelter is scarce. There is a great variation in the prices being quoted on certain lines, such as wire, linseed oil and other goods. Some firms with heavy stocks of seasonable goods, but which are not moving as rapidly as in former years are offering attractive prices in order to unload.

MONTREAL.

MONTREAL, May 13.—Business continues brisk with the country trade generally satisfying. Sorting orders still indicate a hand-to-mouth policy and careful buying on the part of the retailer. In heavier materials things are somewhat brighter than they have been. Altogether, the outside districts continue to equal and surpass expectations, while the city shows very little improvement.

Price changes of the week are largely confined to lines which are directly affected by the metal markets. The advance in copper and galvanized ware which was predicted last week has gone into effect and there are higher prices for copper bars and sheets, also. Spelter is up another 1c and solder down about the same amount. Changes in the prices of copper rivets and copper clout nails are expected shortly.

The Metals.—Efforts have been made in the metal markets to stampede the situation on the strength of the Lusitania disaster, but these have had little effect. Indirectly, interference with the shipment of some munitions of war might affect some of the metals but so far as the transportation of metals required on this side is concerned, opinion is that there will not be a single freighter cancelled on account of the great marine disaster.

Tin.—Although there is no change in the local quotations on tin, the market at 54c to 56c is inclined to be a little easier. At the same time the down movement which had not reached a parity with the lower levels of the American market is somewhat checked by a firmer tone there and an advance of ½c to 40¾c as compared with a week ago. The upturn in New York comes in sympathy with London and appears to be the outcome of manipulation following the Lusitania disaster. At the same time the saner opinions are that the effect will actually be negligible, because of the absence of influence so far as the British mercantile shipping is concerned. A good demand continues in Canada but American markets have been quiet, with consumers indifferent, despite the efforts to make capital out of the great marine disaster; the more important dealers took the stand that they would rather not make profits than make them under such circumstances and, therefore, refused to sell.

Copper.—The local price of 21c remains firm. New York is a fraction higher than a week ago, but the Lusitania disaster has somewhat unsettled conditions owing to the possibilities of the shipment of munitions of war being more seriously interfered with than since the outbreak of the war. However, this condition is likely to be merely temporary; the fact remains that the belligerents are trying to place larger orders for the delivery of copper during the next two years than the producers can take care of. Many millions of rifles are being ordered, and a million rifles means possibly a billion rounds of ammunition.

Spelter.—A further advance in the price of spelter on the local market is recorded, the quotation now being 17c to 18c, as compared with 16c a week ago. New York continues about on a par with last quotations and firm, although London is a trifle off. The high price of the commodity has resulted in advances on galvanized ware this week, following the higher quotations of plates and sheets a week ago.

Solder.—The lower quotation for tin which went into effect some weeks ago has brought about a reaction in the price of solder, with the result that some firms are quoting a cent off. For half-and-half 26c to 30c, and for strictly, 28c to 32c about covers the range.

Lead.—Lead is holding to the rut it got into a few weeks ago and continues to be the least interesting of the metals. However, a somewhat firmer tone is noted and the trust price is ruling on the other side of the line, whereas for several week's second-hands were inclined to undersell fractionally.

Antimony.—There is literally no market for antimony. The price charged in any one case has no bearing upon what may be charged in another. Nominally 35c is quoted in Montreal, but there are few sellers at that or any other price. New York has discontinued quotations on English makes and sales of Cookson's have been noted as high as 42c. Other brands than Cookson's and Hallett's are

Tin	54c-56c
Spelter	17c-18c
Copper	21c
Lead, cwt.	5¾c-6c
Antimony	35c
Solder, ½ x ½	26 to 30
Solder "strictly"	28 to 32
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

nominally quoted at 37c to 38c and Chinese and Japanese 35c to 36c. Local prices are expected to go higher, as there appears to be no limit to the demand and no assurance of continued supplies.

Copper Products.—Following the advance of 2c all round on copper bars and sheets, made last week, there is another advance of a like amount this week, and the following quotations now prevail:

Bars, ½ to 2 in.	$29 00
Plain sheets, 14 oz., 14 x 28 in., 14 x 60 in.	27 00
Copper sheets, tinned, 14 x 60, 14 oz.	29 50
Copper sheet, planished, 14 x 60 base	35 00
Braziers' in sheets, 6 x 4 base	30 00

Copper Ware.—The advance in the price of copper ware predicted a week ago has gone into effect. This is the direct result of the advancing costs of raw materials. Copper boilers and kettles are 42½ per cent. off, as compared with 45 per cent., and the same change has been made on tea and coffee pots. On copper pitts the change is from 25 and 2½ per cent. to 20 per cent. off.

Galvanized Ware.—The quotations for galvanized ware have been affected as predicted last week, the advance being about 10 per cent. Dufferin and English pattern pails and washtubs are all 30 per cent. and 10 per cent. off as compared with 42½ per cent., and other lines are 30 per cent. as against 30 per cent. and 10 per cent.

Copper Rivets.—The advance in the prices on copper rivets and copper clout nails referred to last week as likely to take place in the near future has not yet gone into effect, although the advice from the mills would indicate that it will not be long delayed. Copper wire has been advancing materially.

Screws and Bolts.—The increasing cost of copper is having the effect of making the prices of brass screws very stiff and advances are to be expected.

Bar Iron and Steel.—The movement of bar iron and steel is confined to small lots but the inquiry indicates a little more interest. The basis for iron continues at $2.

Sheets and Plates.—Sheets and plates are firm and galvanized lines are holding the advance of last week well. Demand here shows a little improvement over a week ago. Tinned iron is also firm.

Rope.—The advances of last week have been well absorbed. There is a fair demand from country districts but the consumption on the whole is not by any means heavy. Following are prices:

Pure Manila rope	15½c
British Manila rope	13c
African hemp	13c
Sisal	11c

Nails and Fencing.—Business here is just fair and is confined to sorting orders from country points. City demand is very light.

Iron and Lead Pipe.—The trade is advised to expect higher prices for both black and galvanized pipe in the very near future. There are higher quotations prevailing on the other side of the line and the change locally will not be long delayed; galvanized pipes are particularly affected.

Lead Pipe.—A little better demand is noted this week for lead pipe, and for other lines of plumbers' supplies. Prices continue firm, being 8c for lead pipe and 9c for lead waste pipe; strictly net.

Builders' Hardware. — Some further improvement is noted in the inquiry for lock sets, but the demand is largely confined to the cheaper lines. The irregularity in prices continues, and new lists are being hoped for.

Building Materials.—The demand here is somewhat improved, although not to the extent that could normally be looked for at this season of the year. A slow summer in building lines is logically expected.

Stoves.—The movement of gas ranges continues fairly satisfactory but there is little other business passing among the stove dealers. Indications are that orders for winter lines will be deferred until the last minute.

Seasonable Lines.—There is a marked improvement in the call for harvest tools, particularly scythes and hay forks, while other farm tools continue to move very well. In city trade the call for lawn tools is very satisfactory and indicates that the consuming demand is much better than the trade had anticipated.

Washtubs.—The new prices on galvanized washtubs are as follows:

Sampson galvanized—	
No. 4, doz., net	$10.87
No. 5,	12.10
No. 6	13.48
Common galvanized—	
No. 0	5.84
No. 1	7.82
No. 2	8.51
No. 3	9.71
Nests—	
Nos. 0, 1, 2	1.85
Nos. 1, 2, 3	2.17
Nos. 0, 1, 2, 3	2.66

Sisal Rope	10½c base

TORONTO.

TORONTO, Ont., May 13.—The favorable conditions prevailing in the rural districts are at the present time the most important factor influencing trade throughout this country. The present optimistic spirit prevailing is based to a large extent upon the satisfactory outlook for a good harvest. This is clearly seen by the volume of business from the country trade, which has been consistently good, especially considering general conditions, for several months past. The city trade, on the other hand, is comparatively quiet except for a better demand for such seasonable lines as would naturally be expected at this time of the year. The building trade, although quiet, has picked up lately, and with it a slightly better demand for builders' supplies and hardware.

Importers are viewing with considerable anxiety the shortage of tonnage, and no relief appears to be in sight owing to the fact that so many steamers have been taken over for transport and supply ships. Under these conditions ocean freights have gone up, and it is highly improbable that there will be any improvement in the situation for several months; the tendency is rather for further increases in rates and in addition delays in shipments.

The advance in galvanized and copper ware, as predicted in these columns last week, has been announced, and is now in effect. The advance in all lines is approximately 10 per cent. The tack list has been revised, but only a few items are affected. Copper and brass scrap have advanced, due to the strength of the copper market. An advance of 4c per pound is to be noted for sheet zinc.

The Metals.—The increasing demand for copper, lead and antimony for war munitions constitutes the principal feature in the market. Apart from this business is quiet and buying is still hand-to-mouth. The effect of the war is further shown by the embargo recently placed by the Canadian Government on the export of all metals except to Great Britain and Allies. Under prevailing conditions, however, this should not

affect the market to any appreciable extent, as considerable quantities of metals mostly in demand now are being imported. The tin market is weak, but unchanged. The copper market is strong and prices holding firm on active demand. The spelter situation is unchanged, and prices continue on the upgrade. Lead is quiet, but firm. Antimony continues to advance, and supplies are becoming scarcer than ever. Aluminium is unchanged at 23½c per pound.

Tin.—The market is dull and weak, with a declining tendency. The situation is easier and the visible supply is increasing, but enquiry is light. Quotations are unchanged at 45c per pound.

Copper.—The New York market is quiet and firm, but London is easier. The consumption of copper continues to increase, due to the demand for this metal for munitions. Production is also increasing rapidly, which will tend to steady the market, although higher prices are very probable. Local quotations are firm, but unchanged at 21c per pound.

Spelter.—The market is firm, with good inquiry. Producers seem to be well sold up and consumption is increasing, indications pointing to still higher prices. Spelter has advanced 1c, and quotations are nominal at 16c per pound.

Antimony.—The demand is increasing, and there seems to be no limit to the amount of antimony needed for war munitions. Quotations are nominal and range from 36c to 38c per pound.

Lead.—The New York market is quiet and firm, but London is irregular. Quotations are unchanged at 5¾c per pound.

Scrap Metals.—A good demand for copper and brass scrap is reported, and the market is strong at higher prices. Copper has advanced 1c, and is now quoted at 13c per pound. Brass is ½c higher, heavy brass being quoted at 9½c and light brass at 7½c per pound. Zinc has advanced 1c, and is quoted at 8c per pound. The market for steel and iron scrap is quiet and prices unchanged.

Bar Iron and Steel.—Prices are holding firm, but the trade is showing little activity except for the shell business, which is expanding. A fair demand is reported for bridge sections, but the building trade is still quiet. Prices on bars are unchanged at $2.05 base.

Pig Iron.—The market is stagnant, with little business passing, foundries still being very quiet. Hamilton and Victoria brands are unchanged at $19 per ton.

Wire Nails.—There is no very active demand for nails, but prices are firm at $2.35 base. Cut nails are quoted at $2.75 base.

Kitchen Utensils.—As predicted in last week's issue of Hardware and Metal, prices of galvanized and copper ware have advanced, the higher cost of spelter and copper having made this step necessary. The new discounts represent an advance of 10 per cent., and are as follows:—Dufferin and English pattern pails and washtubs 30 and 10 per cent.; other lines 30 per cent. Copper boilers, kettles, tea and coffee pots, 42½ per cent.; copper pitts, 20 per cent.

Tacks.—A revision in discounts of tacks has been announced. The new discounts only affect a few lines, and are as follows:—Copper tacks, 33 1/3 per cent.; copper nails, 33 1/3 and 5 per cent.; hob nails, 30 and 7½ per cent.; steel wire shoe rivets, 25 per cent.; clinch point steel rivets, 30 per cent. Other lines remain as before.

Stoves.—Gas and oil stoves and gas ranges are moving out freely, and one house reports a brisk demand for a line of stove ovens.

Sheet Zinc.—The market is strong, and prices have advanced 4c. The new quotations are as follows:—5 cwt. casks, 18½c, and part casks, 19c per pound.

Rope.—The market is firm and business is very good. The Manila situation is not improving, as there is a probability of a shortage of hemp owing to drought in certain districts in the Philippine Islands. The sisal situation in Mexico is unchanged. Prices on rope and twine are given in the current market quotations.

Iron and Lead Pipe.—The market is quiet, but showing some improvement. Lead pipe is quoted at 8c and waste pipe at 9c. Iron pipe prices are given in the current market quotations.

WINNIPEG QUOTATIONS.

Canada Plates:	
Half Polished, 6-7 inch ..	$3.80
Full Polished, 6-7 inch ...	4.95
Solder	32c-33c lb.

Sash balance (Caldwell)	37½% off
Solder Irons	40c base
Shaving Soap (sticks, cream, powder), per doz.	$2.65

LONDON.

LONDON, Ont., May 13.—Business continues good, and retailers are finding a ready sale for all seasonable lines, particularly lawn mowers, garden tools, paint, etc. Very few price changes have occurred this week. Linseed oil has advanced two cents per gallon. Galvanized and copper ware have also advanced in price.

The new quotations on linseed oil are as follows:—

Raw Linseed—			
1 to 2 barrels.....	82c	per	gallon.
3 to 5 „	81c	„	„
6 to 9 „	79c	„	„
Boiled—			
1 to 2 „	85c	„	„
3 to 5 „	84c	„	„
6 to 9 „	83c	„	„

Turpentine remains unchanged at last week's quotations; single barrels, 73 cents per Imperial gallon; 2 to 4 barrels, 72c per Imperial gallon; 5-gallon lots, 80c per Imperial gallon.

Rope sand twines are still quoted at the prices published in last week's report.

Wire Nails, etc.—Wire nails are quoted at $2.35 base, and cut nails at $2.70 base. Poultry netting is in fair demand at 45 per cent. off list; painted screen wire is selling well in 100-ft. rolls at $1.55 per 100 sq. ft., and at $1.60 per 100 sq. ft. in 50-ft. rolls; plain galvanized No. 9 wire remains at $2.30 per 100 lbs.; while No. 9 coil spring is quoted at $2.35. Barb wire is selling at $2.55 per 100 lbs.

Sprayers, Paris green and other spraying materials are moving freely.

WINNIPEG.

WINNIPEG, May 13.—The season has come when the weather becomes a matter of vital interest. More depends upon conditions within the next three or four months than probably ever before in the Canadian West, and practically every business house is making an effort to get all the information possible as to the state of things throughout the prairie provinces. It is very cheering to note that only from one small district are unfavorable reports received this week. This is the district along the Weyburn-Lethbridge line where, it is stated, rain is badly needed—must come, indeed, within ten days or crops will suffer greatly. From

all other parts of the country word received is satisfactory. There have been quite general rains. There have been snowfalls in a number of districts, which have done good, and all in all the prospect for a splendid yield is fully as good, perhaps better, than usual.

Good Volume of Business.

The volume of business is generally reported as satisfactory. Fencing continues to move well. There should be heavy orders of poultry netting and poultry fencing within the next week or two, for at the present prices this seems exceedingly good buying. The prices are not justified by the cost of the raw material by any means. They are much lower than the raw material would ordinarily make necessary.

Netting and Fencing Down.

The week has seen a number of price revisions. Poultry netting, just mentioned, is now quoted at 50 per cent. off the list, which puts it back to the old prices quoted before the increase necessitated by high cost of galvanizing and by the war tariff. Poultry fencing, too, is down about 8 to 10 per cent. There seems no doubt that the decline is due to the low price for fencing being asked by some of the mail order houses. These houses are probably making fencing a leader, hoping to get other more profitable business by reason of the low figures quoted. Western wholesalers, however, are meeting the prices, though unquestionably they are selling for less than they will have to give for the fencing with which they must replace their stock.

Rope Goes Up.

Rope has taken another advance, pure Manila now being quoted at 17c instead of 16c and British Manila at 14c instead of 13½c. African hemp is listed at 14c. In face of these advances there comes a decline in cotton ropes, which are now quoted at 24c. This reduction of 3c seems rather to indicate that the prices were advanced a little too rapidly when there came a change in tariff. There have been no alterations in market conditions, which would account for this drop.

Sheets Somewhat Lower.

Black steel sheets are being quoted under a revised list—10-12-14 and 16-gauge being about 15c per cwt. down from the old quotations. Present prices are:

10 and 12-gauge	$3.00
14 and 16-gauge	2.90
17 to 24-gauge	3.35
26-gauge	3.45
28-gauge	3.60

There seems some possibility of galvanized sheets advancing locally. These have been put up by some United States manufacturers within the last little time.

Chilled Shot Up.

One change in ammunition prices is noted, chilled shot now being quoted at $11, instead of the recently struck high level of $10.75. This further advance is due to the high price of antimony.

Brass snare wire, extensively used throughout the West during the fall and winter, has made another upward movement, now being quoted at 45c per lb. This is an advance of 10c in the last fortnight, and it is expected that this product, so much used by trappers, will go considerably higher still. The rise, of course, is due to the high cost of brass.

Paint prices remain steady. Good country demand is reported. In stoves and furnaces, too, the demand from the country seems to be encouraging.

Hardware and Metal is always glad to comment favorably on the work being done by the Government and manufacturers to preserve our large natural resources. The above illustration shows a slip of paper which is being inserted in every box of shot shells and sporting rifle cartridges produced by the Dominion Cartridge Co. On the reverse side is printed the following:

Don't start bush fires.
Don't throw lighted matches about.
Be careful of your cigars, cigarettes and live pipe ashes.
More than anything else, don't leave a camp fire until you are ABSOLUTELY SURE IT IS OUT.
A little extra care may save thousands of dollars and innumerable birds and animals.
Printed at the request of the Dominion Government.

This should act as a ready reminder to hunters and go a long way towards lessening the number of forest fires which have done such a vast amount of damage throughout Canada during the past years.

ADVERTISER WHO EXAGGERATES

The advertiser who exaggerates appeals only to that part of the public which may be classed as easy marks, and this class is not big enough to keep the salespeople very busy. It's better to advertise an article as worth a dollar and sell it at that price than it is to claim it is worth two dollars and sell it for one. Even a sucker will quickly spot the store that exaggerates in its advertising.

WASH THE WINDOWS.

With some stores it seems to be the custom to have the show windows washed whenever the porter gets around to the job. While most people believe in a certain amount of exercise, most of them are averse to hurdling mop handles. Window washing should be done in the early hours of the morning.

Paint Department

The Movement is Spreading

Clean Up and Paint Up Movement First Regarded as a Fad, Becoming a Strongly Organized Movement—What They are Doing in Montreal.

THE importance of the safeguarding of public property and public health are beginning to give a practical "punch" to the spring clean-up and paint-up campaigns and succeeding years find what was at first regarded as a fad becoming a strongly organized movement. The force of example is gaining sway; the effect of individual efforts in cleaning up the rubbish in the back yard and painting up the fence in the front is spreading largely because no man likes to be behind his neighbor. Cleanliness is just as infectious as disease. To the hardware dealer the spring campaign bears a significance for to him there is a business benefit as well as a moral one. If citizens paint up they must use paint: if they clean up they must use rakes and hoes and spades, etc.: if they plant a garden they must buy vegetable and flower seeds and the paraphernalia required for a garden campaign. Therefore all power to the cleaners-up and the painters-up.

In Montreal a clean-up week will be launched on Monday, after a Sunday on which the local ministers are asked to give a moral impetus to the campaign. Behind the campaign is a complete and thorough organization, headed by the fire department and the health department and supported by a strong committee of prominent business and professional men.

Nothing to bring the benefits of cleanliness and brightness to the attention of the citizens has been neglected. The public, public platforms, pamphlets, picture houses, the press and other forms of publicity have been extensively used over a period of one week prior to the actual campaign. The city has been deluged with 50,000 bilingual pamphlets which were distributed through the fire department. Red cards were distributed bearing a calendar for the year and suggestions for the prevention of fires and insurance of hygienic cleanliness. Public meetings were held in all parts of the city for a week prior to the campaign and the pulpits were used on the Sunday to impress upon the public mind the importance of the objects in view.

"Health First."

A garbage can with the slogan "Health First," and the seal of the compaign committee decorates the bilingual pamphlet distributed throughout the city. The pamphlet gave the program which was introduced by an announcement to the effect that the City Improvement Campaign Committee, together with the leading associations and citizens of Montreal, were making another appeal to the population and asking every boy, every girl, every woman and every man to make a great effort this spring and this year to render Montreal a cleaner city. A clean-up pledge was submitted.

The Montreal Program.

The week starts off with Fire Prevention Monday, and emphasis is laid upon the fact that carelessness is the chief cause of fires, and that fires last year cost every family in the city $3.

Front Yard Tuesday precedes Back Yard Wednesday. The first is suggested for devotion to grass sowing, and the planting of flowers, trees, etc., while the second can well be devoted to the removal of rubbish and the whitewashing and painting of fences, etc., in addition to the planting of the vegetable garden.

Thursday is Sanitation Day for the cleaning of carpets, ventilation of cellars, scrubbing and painting—soap and paint are strongly recommended.

Friday is specially dedicated to the paint can and the paint brush, and citizens are urged to follow the example of nature by making everything bright with colors. Saturday winds up the week—a special day for children. Attention is called to the fact that 50 per cent. of the new born babies die before they are one year of age, and the public is asked to do something to prevent this needlessly high mortality rate. "Last year's clean-up campaign saved the lives of 200 infants. It may save yours this year," is the concluding appeal.

Fire and Health.

The card issued by the fire and health departments is intended for permanent posting. There are valuable suggestions about the simple preventative measures in relation to fires and there are emphatic injunctions as to the importance of cleanliness in the prevention of disease. The citizen is candidly told "Wash yourself often. Change your underclothes often. Statistics show that men live 10 to 15 years longer when they keep themselves clean." There are also emphatic injunctions as to dealing with infectious diseases and the causes thereof.

A District Campaign.

A clean-up campaign is also being conducted throughout the Eastern Townships. Organized by the Eastern Townships Associated Boards of Trade, this campaign has spread to a large number of towns and villages throughout the prosperous district. Boards of trade, town and village councils took hold of the matter in a very energetic manner: premises were cleaned, buildings painted and special attention given to tree planting, which was carried on with the co-operation of the Department of Agriculture at Ottawa.

In Sherbrooke posters were put up appealing to the citizens to do their part, and circulars were distributed amongst the school children: advertisements also appeared in the press.

A CLEAN-UP PLEDGE.

I want to help make our town a better place to live in, and to this end I promise to comply with the following rules to the best of my ability:

1. *I will help clean up yards, streets and alleys.*
2. *I will plant flower seeds, bulbs, vines, shrubbery, etc.*
3. *I will help make gardens, and keep lawn in good condition.*
4. *I promise not to deface fences or buildings, neither will I scatter paper or rubbish in public places.*
5. *I will not spit upon the floor of any building or on the sidewalk.*
6. *I will try to influence others to help keep our town clean.*
7. *I will always protect birds and animals, and all property belonging to others.*
8. *I promise to be a true, loyal citizen.*

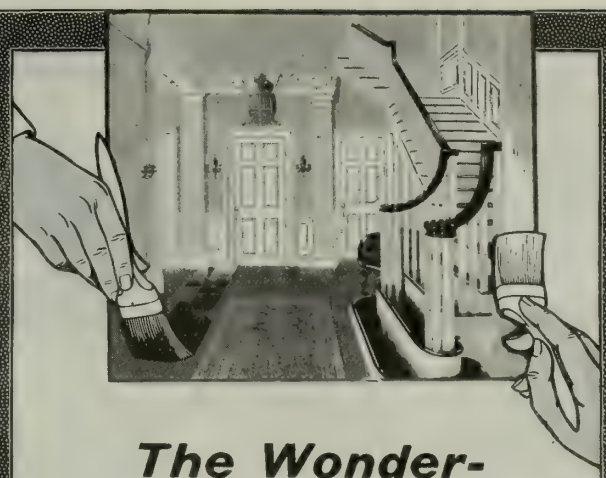
I may not be able to do all these things, but will do as much as I can to help our town and community.

How To Increase Your Business
Ask your Jobber about Ingersolls

Many Canadian hardware stores owe their success to a broad selection of popular specialties. Such articles as chafing dishes, sporting goods, cutlery, automobile accessories and Dollar Watches, not only sell readily at a good profit, but bring new people into the store who become regular customers.

The INGERSOLL DOLLAR WATCH is one of the most desirable of hardware specialties. Why? Because *hardware store patrons are the logical users of Ingersolls.*

Carpenters, masons and mechanics need a reliable, inexpensive watch in their working clothes. Hunters and campers also need Ingersolls. So does the growing boy. All these are but a few of your regular customers who use the Ingersoll.



The Ingersoll Watch is a clean, inviting proposition to handle. Just a small investment brings a complete stock. The stock turns several times a year at about a 28% profit each time or 84% a year.

Ingersoll Stock does not lose value nor get out of date. It is of small bulk and requires little space. It hangs on its Ingersoll fixture where readily seen and helps sell itself.

Such is the Service of Ingersolls in a hardware store. Write to your jobber or to us for a dozen assortment.

Rob't H. Ingersoll & Bro.

200 McGill Street **Montreal, P. Q.**

The Wonder-Working Finishes

Liquid Granite
Lasting Waterproof Floor Varnish

The work of a good floor varnish is two-fold. It should both protect and beautify the surface it covers. Liquid Granite has been doing this two-fold work in homes and public buildings for over half a century. Its lustre enhances the beauty of natural woods and its extraordinary toughness defies the effects of water, weather and hard wear.

White Enamel Luxeberry
Whitest White—Stays White

The same qualities of toughness and elasticity that mark Liquid Granite also distinguish Luxeberry White Enamel. And whether you prefer a finish of porcelain-like brilliancy or dull ivory in tone, Luxeberry produces a surface that shows no trace of brush marks and refuses to crack chip or turn yellow, no matter how hard the wear.

You can assure your customers certain satisfaction and yourself sure profits by supplying these well-known brands. If you are not now handling Berry Brothers' products, write for our dealers' proposition.

Walkerville, Ontario (51)

Weekly Paint Markets

MONTREAL.

MONTREAL, May 13.—The brisk seasonable demand continues; makers are busy and generally satisfied with the returns under the existing conditions. Sorting orders continue to show that the trade is still working on the hand-to-mouth basis, and that favorable weather has led to early exhaustion of supplies. Country business throughout Ontario, Quebec and the East is generally considered an improvement on a year ago, and the city store trade is more encouraging, although, of course, the industrial and commercial consumption, which embraces "big business," continues very slow, and the better demand in country districts is more than counterbalanced. Price changes over the week are not important, although there have been some quotations shifted by individual firms without altering the range; these are irregular and evidently influenced by state of supplies rather than the market.

Linseed Oil.—There cannot be said to be any real change in the oil market, crushers giving the same quotation, with a firm tone prevailing. The wide range continues among the dealers, although one house, which was at the bottom a couple of weeks ago, reports an advance of 3c and another a decline of about 2c. The two firms referred to are now about even in the middle of the range, but the high and low quotations are still heard in the market. Demand continues fair.

	Raw.	Boiled.
1 to 2 barrels	81-88c	84-91c
3 to 5 barrels	80-87c	83-90c
6 to 9 barrels	79-86c	82-89c
10 bbls. and over ...	87-85c	81-88c

Gasoline. — The gasoline situation shows little change. Prices are unaltered and the demand continues very fair. Drums are quoted 15c a gallon and tank wagon 14½c.

Turpentine.—The turpentine market is higher, refiners reporting an advance during the week of 1c. However, in the trade there is not a general covering indicated. Refiners quote 68c, and the top of the range has been moved to 70c; but the low quotation of last week—67c—continues, and one figure is heard at 66c. A quotation of 2c under the refiner's price indicates the unsettled state of the market, and the fact that some dealers are basing figures on their own stocks rather than the present cost.

	Per gal.
½-bbl. lots	70-73c
1-bbl. lots	67-70c
2 to 4-bbl. lots	66-69c
5 to 10-bbl. lots	65-68c

Lead and Zinc.—Lead and zinc both continue very firm, not only on account of the metal situation, but also on account of the price of oil. Lead is still quoted $8.95, with 30c advance for less than ton lots; zinc is about 14c in 25's.

Glass and Putty.—The glass market is still unsettled, with prices unchanged, but nominal. Putty is very firm, and is likely to be advanced when the present high cost of whiting is taken into consideration. The price is stated to be 20 per cent. to 25 per cent. higher than before the war, and it is expected that putty will feel the effects as soon as old supplies are exhausted.

Colors, etc.—The situation as regards colors continues very irregular and shortages more acute, as consumption exhausts the ever decreasing supplies on hand, while there is evidently little prospect of European supplies for some time to come.

TORONTO.

TORONTO, Ont., May 13.—The present spell of fine weather has had a stimulating effect on the paint trade, although not to the same extent as in previous years. This is especially noticeable in the city trade and due to the industrial depression which is affecting the manufacturing centres to a greater extent that in the country districts. Linseed oil has advanced 2c per gallon, but otherwise there are no price changes of importance to note. The situation with regard to dry colors does not improve and in some cases prices are more or less nominal. Whiting is very firm and a scarcity is reported owing to shortage of tonnage. White lead is also firm. The glass situation is unchanged, but prices are firm. Collections continue slow.

Linseed Oil—With flax seed firm at $1.86, the present price of oil would appear to be low, but as the demand is light and cheap oil is still on the market, there is a tendency to keep prices down. The market, however, has advanced 2c, and 82c for raw oil is now being quoted. The range is practically the same as last week, one prominent dealer quoting as high as 89c, while another as low as 79c. The following prices, however, are generally being quoted in Toronto:

	Raw.	Boiled.
Single barrels	82	85
3 to 5 barrels	81	84
6 to 9 barrels	80	83

Turpentine.—The situation continues much the same and prices are holding firm. There was a considerable shortage in supplies of raw turpentine during the month of April in the South, due to adverse weather and also on account of a decision to decrease production. These conditions are having a tendency to keep prices firm. The production of resin was affected in the same way and prices of common grades have advanced but higher grades are unchanged. The following prices are quoted locally for turpentine: Single barrels, 73c; 2 to 4 barrels, 72c; and 5-gallon lots, 80c per Imp. gallon.

Whiting.—The market is firm at the advanced prices announced last week and the situation is unchanged as regards scarcity of tonnage. Whiting is scarce on this account, and there appears to be little prospect of any immediate relief.

White Lead.—A very fair demand for white lead is reported, and prices are very firm. The list is given in the current paint market quotations.

Gasoline—Gasoline is moving very freely now at 18c per gallon. Coal oil is quiet at prices given in the current market quotations.

Glass—It is reported that the American glass manufacturers contemplate decreasing production, as they are carrying heavy stocks and the demand is only moderate. This condition may influence the situation here, as it will have a tendency to keep manufacturers' prices down.

Putty.—The market is firm but prices are unchanged, although raw materials are increasing in cost. The following prices are for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.40
Bulk drums, 100 lbs.	2.60
Bulk drums, 50 lbs.	2.65
Bulk drums, 25 lbs.	2.70
Bulk drums, 12½ lbs.	2.95
Cased tins, 25 lbs.	2.90
Cased tins, 12½ lbs.	3.10

SELLING "QUALITY"

One painter tells another of the Superior Quality of B-H "English" Paint.

Every can sold becomes a silent salesman in the true sense of the word.

The greatest selling point in B-H "English" Paint is a guaranteed formula of—

70% of Brandram's B.B. Genuine White Lead

and

30% of Pure White Zinc

In all tints and white.

Every painter and houseowner recognizes the value of a guarantee in an article so often adulterated as Ready Prepared House Paints.

Don't take the risk; stock the paint that has the real Selling "Quality"

B-H "ENGLISH" PAINT

BRANDRAM-HENDERSON LIMITED

Finding a customer for C.P. SANITONE is not difficult for the alert paint salesman

OVER the counter he talks with people every day who discuss their plans for redecorating the home this Spring. Some are thinking of repapering, others have almost decided to use a water paint in order to get an artistic flat covering for their walls. These customers offer the mark and your paint department should aim for a bull's-eye sale of Sanitone.

It is a finish you can talk for time at stretch, and its qualities are bound to get the attention and interest of your customer. Clinching the sale depends on how strongly you make your listener want a home finished with the modern wall finish—made in twenty-four soft, velvety, delicate shades — offering a wide latitude in choice of color combinations to fit in with their particular furniture and furnishings.

Tell them of its durability and permanency—how it is absolutely sanitary and clean—can be washed with soap and water. Show up, by actual demonstration, its superiority over wallpaper and water paints, and emphasize the economy it affords—no necessity for refinishing every other Spring.

Sanitone is a line your time is well worth while spent in pushing—do it now.

¶ The fact that the successful business man is an advertiser is usually incidental. He is an advertiser because he is wise and possessed of good, sound business sense and an analytical mind. At some time or other he came to the conclusion that advertising could be made one of the mightiest factors of his business organization, and having arrived at this conclusion, he just naturally went to it and advertised.

Would you believe words could be printed on Wood Veneer?

The veneer is very thin, in fact as thin as paper, and then it is mounted on heavy cardboard. The new sign which we are distributing to Hardware stores is a good sample of this kind of work. The lettering on this sign is inlaid in a different kind of wood veneer. All this helps make the sign interesting and when it is displayed by a Dealer selling Simonds Hand or Cross-Cut Saws it invariably creates a great deal of interest. A high-grade saw like the Simonds should necessarily be represented by a high-grade sign. We will send one or two to any customer selling our saws, whether buying direct from us or through a jobber.

"Phenomenal Sales Increase"

Says Long Established Booth & Law Co.

WHEN a man who has been at the helm of a hundred year old business for nearly half a century says that the sales increase of his company on Pratt & Lambert Varnishes has been phenomenal, it pays to listen. Such long experience in selling various lines of varnishes and in judging of varnish quality make this statement of unusual significance. Read Mr. Law's letter which points out some of the reasons why such gratifying sales results have been possible for them and are possible for *you*. If you will read this letter and act on it, you will be taking a straight and direct course to successful varnish sales.

Pratt & Lambert,
185 Madison Ave.,
New York, N. Y.

Gentlemen:

Although we have been in business as you know almost a hundred years, it is only recently that the modern force of advertising has become a big factor in business. Thus in recent years we have been able to greatly increase our business through the handling of advertised lines. It was our study of what constituted good advertising backing of a line of goods that led us to adopt Pratt & Lambert Varnishes a few years ago. We have not been disappointed with the results. Our first order while small has grown until now we order in carload quantities and our sales increase in this time has been phenomenal.

Your magazine advertising, dealer helps of all kinds, painters' magazine, "Varnish Talks", letter promotion campaign to home builders, Architectural Department which is getting the good will and co-operation of architects and securing their specifications for Pratt & Lambert Varnishes, your Advisory Department, method of referring inquiries, in fact every other detail of your advertising plan is in our opinion 100 per cent efficient and is pulling the results for us. This can be easily seen from the fact that despite all the "calamity howlers" of the past year, our business has shown a decided increase and due to the fact that you have advertised harder than ever during the past year while some of the other fellows seem to have let down. With the indications of returning prosperity this Spring, we look forward to the greatest year on Pratt & Lambert Varnishes in the history of this company.

Yours for Success.
Walter B. Law

Stephens

HOUSE PAINT

Stephens House Paint is made by experts for the use of both the Painter and Consumer.

The professional painter, as well as the amateur, is a steady user of "Stephens House Paint" because it saves him time and money, and always gives satisfaction. Stephens House Paint has wonderful weather-resisting qualities and no superior as a surface coverer.

If not already represented in your town we will be glad to explain our exclusive agency proposition. Write us about it.

G. F. STEPHENS & COMPANY, LIMITED

PAINT AND VARNISH MAKERS

WINNIPEG and CALGARY

Who Stole the Secret Submarine Plans?

Who breathed out the news of their existence in that seething city where foreign agents thrive?

The secret meant naval supremacy for the Government—and a fortune for the penniless inventor.

The network of mystery that shrouded its disappearance seemed choking in its completeness.

And then—Anson Hogarth was put on the case.

Just how the armchair detective's penetrating deductions wheedled out the guilty one is a story athrill with suspense—and action—and surprise.

"The Great Naval Secret," by Donald Donovan, grips right through to its astonishing climax. Read this wide-awake story of unusual cleverness in

The No. 221 Fire Pot

THE No. 221 FIRE POT

is made to meet the demand of the trade for an extra strong Fire Pot, using Kerosene as fuel. There is a growing demand for Kerosene Fire Pots, and the No. 221 tank is made of heavy gauge, seamless drawn steel, reinforced, with all the fittings and the bottom welded in, making it extra strong and durable. The burner is made of special metal, and produces a steady blue flame of intense heat, devoid of smoke or smell. The No. 221 will give you splendid satisfaction and please your customers. All leading jobbers will supply at factory price. Send for catalog—it's free.

SUPREME CUTLERY

A Straight Talk From the Manager

The News Value of Advertisements

Away back in the "dark ages" of trade journalism, it was customary for advertisers to prepare one dry and uninteresting piece of copy, usually devoid of illustration, and allow it to run "t.f." (till forbid).

Just to show how far we have advanced from that primitive stage, consider the fact that, in last week's issue of Hardware and Metal, out of a total of 136 advertisements, exactly 63 had never before appeared in type. Most of the others are changed frequently.

There is always something new in the advertising pages of Hardware and Metal. You miss a great deal of valuable news, unless you read these pages weekly, as a regular habit.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—HARDWARE BUSINESS—STATE stock, turnover, profit, lines handled, buildings, terms, general information. Box 184, Hardware and Metal, Toronto. (20)

TINSMITH WANTED—ONE WITH EXPERIence in plumbing as well as tinsmith work. Apply, stating wages expected and experience, to N. H. Bowers, Massey Sta., Ont. (21)

SITUATIONS VACANT

WANTED — RELIABLE ENERGETIC MAN to secure subscriptions and renewals to MacLean's and Farmer's Magazines. Good income guaranteed to capable person. Apply by letter, stating qualifications to The MacLean Publishing Company, Limited, 143-153 University Ave., Toronto, Ont.

MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

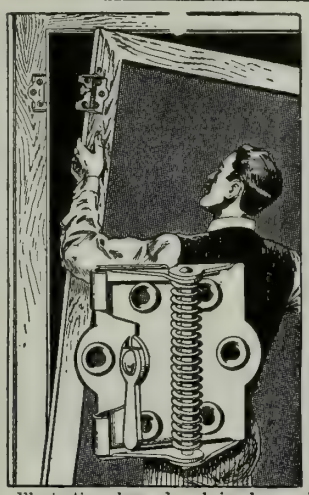
ADDING TYPEWRITERS WRITE, ADD OR contract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Advertising



"Advertising is the education of the public as to who you are, where you are, and what you have to offer in the way of skill, talent or commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service."—*Elbert Hubbard.*

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

IN COLORS, PATTERNS AND CONSTRUCTION

will greatly increase your HAMMOCK turnover

as it has done for thousands of other hardware merchants.

Hohlfeld Couch Hammocks are equipped with a combination back rest and windshield having a patented adjustable interlocking attachment. Absolutely dependable.

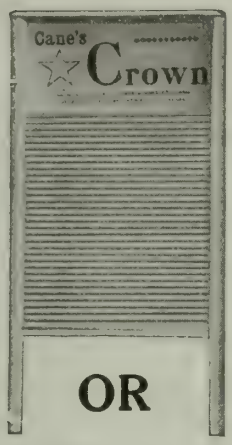
A continuous double rope suspension is reinforced by galvanized chains tested for extra weight.

Mattresses are made with extra quality filling and have soft tops. Comfortable and sanitary.

The **Hohlfeld Sleepy Hollow Hamokradel** has been tried and is proving its worth the world over. The most complete yet withal the least expensive of any contrivance made for the comfort of baby.

Jot down a line for full particulars now.

The Hohlfeld Manufacturing Co.



PHILADELPHIA, PA.

KINDLY MENTION THIS PAPER WHEN WRITING ADVERTISERS

"It's an ill wind that blows no good"

ALUMINUM

ZINC

OR

The War—

has raised the price of zinc and consequently the price of washboards—

BUT

the BIG CANE VALUE IN WASHBOARDS IS BIGGER THAN EVER because it has come to a point where we can use aluminum in place of zinc.

ALUMINUM IS LESS LIABLE TO CRACK, SPLIT OR CARRY DEFECTS THAT WILL TEAR THE CLOTHING BEING WASHED ON IT, AND IT PRESENTS A MUCH BRIGHTER APPEARANCE THAN ZINC, AND IS MORE ATTRACTIVE ON THAT ACCOUNT.

We are prepared to deliver our standard brands of washboards with aluminum washing plate at **the same price as that of zinc** ones on receipt of instructions from our customers, through the jobbing trade. ORDER NOW.

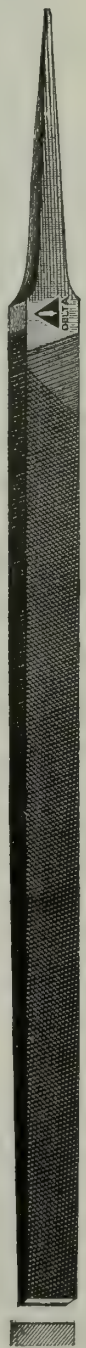
The Wm. Cane & Sons Co., Limited

Newmarket, Ont.

R. BIRD & CO.

Crewkerne, England

Wholesale.. Orders through merchants.



WEBBING

Manufacturers of

Cotton, Linen and Woollen Webs, Straining Webs, Ready-Made Girths, Rollers, Surcingles and Horse Clothing of every description for the Saddlery Trade; also of **Chair, Tray, and Cocoa Binding Webs**, for Upholstery Purposes.

Awards:
Gold Medals, Calcutta, 1883; International Exhibition, 1885; and First Order of Merit, Adelaide.

A Sure File-Sales Booster

The deeper cut and longer lasting cutting edge of

Delta Files

will give you command of the file business of your community.

Delta Files enable piece workers to earn more on their work, and they increase production for the employer and cut down his file expense—they make steady file customers, and by the connection you build up through supplying Delta Files, you will increase your sale of other mill supplies.

WHAT WE DO TO HELP YOU.

We have made exhaustive working tests of the Delta File against other files, and have had diagrams made which clearly show just **how much deeper a Delta File will retain its cutting edge than any other file.** We send you any number of these for distribution in your vicinity.

We supply attractive display signs, and circularize your vicinity, mentioning you as our local distributor, etc., etc.

THIS IS YOUR OPPORTUNITY TO SELL MORE FILES.

Ask us to send full particulars re our agency proposition.

TRADE MARK

DELTA

The only line of files from 3 to 24 inches made absolutely of crucible steel.

A shape and size for every requirement.

DELTA FILE WORKS

PHILADELPHIA, PA.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test—and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

Send for our new Catalogue F.

GIPE-HAZARD STORE SERVICE CO., LTD
97 Ontario St., Toronto, Canada

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because--

It is **exceptionally convenient, quick acting and an oil saver.**

Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted as the flow of oil stops the instant the pressure on the plunger stops.

A sure good sale and splendid profit. Order it now.

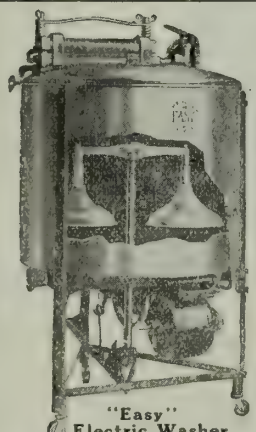
EUREKA GLASS TANK SPRAYER

STRONGLY MADE. WELL PAINTED. ATTRACTIVELY FINISHED. For Spraying Potatoes, Tobacco, Small Shrubs, and all disinfectants in poultry houses and on live stock, this will be found an excellent sprayer.



The pump cylinder is supplied with an air chamber, which prevents any of the solution being drawn back into the valves, and also greatly increases the pressure when spraying. Discharge tubes are brass—no corrosion. Pump rod is hard steel. Plunger leather is of special type, and is made from heavy calf leather. Equipped with regular crown jar and ordinary rubber ring.

FULLY GUARANTEED. PRICES ATTRACTIVE.

CHICAGO STEEL BENDING BRAKES

(Made in all sizes)

Regarding the Steel Bending Brake we purchased last Spring, are pleased to report that we are more than delighted with this machine, not only with the way it is constructed, but with the work it turns out. We formerly used a —— brake, but are very glad indeed now that we have made the change. We get more speed and better results.

Yours truly,

THE McCLARY MFG. CO , C. E. Main, Manager

The Steel Bending Brake Works Ltd., Chatham, Ont.

HERCULES

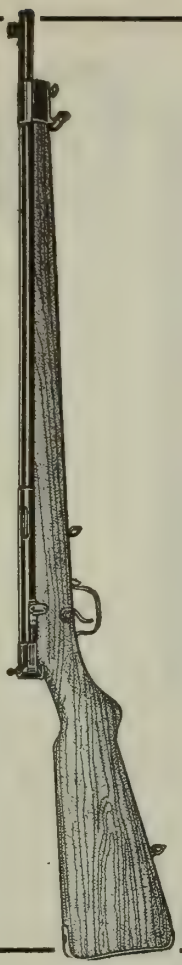
SHELF LOCK

STRATFORD LADDERS

Are Easy Selling Value

The HERCULES is made right in every particular. The wide top, sides, steps, and all stock entering into it is carefully selected from the finest material. **It is the most perfect ladder made.**

All iron and steel parts are finished in aluminum, which, with the clear bright woods, makes this pattern one of the most attractive and most easy sellers on the market. The combination of strength, safety, durability and attractiveness is unexcelled.



The "SHELF LOCK" is the lowest price step ladder we make.

Galvanized steel ears fasten the legs and risers to the top.

The Lock that holds the ladder from opening and closing when in use is made by using strips of steel to form a hinge with the arms that support the shelf.

Drop us a line now for full particulars.

PEERLESS Ornamental Fencing

IT is easy to explain the merits of Peerless Ornamental Fencing to a prospective customer. There are so many things in its favor. First, it is really an ornamental fence; second, it is an economical, and at the same time, durable fence; third, it beautifies home surroundings and presents a splendid appearance. Gate and fence match well together. Then, too, there is money in it for you.

Peerless Ornamental Fencing

not only protects, but beautifies property as well. Every stay is made of strong, stiff wire that will not sag. Our fencing is made from galvanized wire. Peerless fence is easy to erect, and will hold its shape for years to come.

Send for Dealers' Proposition

Get our literature showing many beautiful designs for lawns, parks, cemeteries, etc; also ask about our farm fencing and gates.

To the Manufacturer Who Has Cut Out His Advertising

Just at the time when you feel the need of signed orders and your employees feel the need of their work and pay envelopes with unusual acuteness, you have thought to protect your bank balance by discontinuing your advertising.

And yet, if you were to fall sick, you would likely send for a doctor at once. The sicker you became the more lavish would you be in the employment of specialists and trained nurses and in the purchase of medical supplies. It would be ridiculous in the extreme for you to cut out doctors and medicines for the reason that your health was declining.

Now, advertising in Hardware and Metal may rightly be regarded as a Business Doctor—a specialist in those disabilities peculiar to the manufacturers of hardware and allied lines. When properly employed it will help you to develop new customers and to hold those you already have. It will pull you through your present trouble and pave the way for a rapid convalescence in the invigorating air of the business revival which is surely on the way.

Montreal, Toronto, Winnipeg, Boston, New York, Chicago, London, Eng.

HARDWARE AND METAL

Vol. XXVII. PUBLISHED EVERY SATURDAY SINCE 1888 May 22
No. 21 THE MACLEAN PUBLISHING COMPANY, LIMITED 1915
PUBLICATION OFFICE: TORONTO, CANADA

THE "WOODYATT"

Open four and five-knife cylinder. Tool steel knives, oil tempered. Bearings are extra long and adjustable. Best quality material used throughout its construction. Made with grass-box attachment. This mower has been on the market longer than any other high-grade mower in the world.

"THE SURE-SATISFACTORY KIND"

The quality, finish and distinctive mechanical features of T.-F. Mowers have never been equalled. They are the logical result of selecting the best raw materials, using the most modern mechanical facilities and employing highly skilled workmen, and backed up by an experience in lawn mower making extending over 40 years.

Taylor-Forbes Lawn Mowers are the best known line in Canada, not only because of the long time they have been on the market, but because they have made friends everywhere through their splendid service.

TAYLOR-FORBES LAWN MOWERS

MADE IN CANADA

THIS GUARANTEE GOES WITH EVERY TAYLOR-FORBES MOWER

If for any reason, at any time within one year from date of purchase, the purchaser of a Taylor-Forbes Lawn Mower is not satisfied with his purchase, we INSIST on giving him a new machine or refunding his money.

Our Field is the World

ORDER FROM YOUR JOBBER if he does not carry the T.-F. line, write us. **We will supply you quickly.**

UNIVERSAL Lunch Box

For those who eat luncheon away from home

No. 20 Tan Finish.	Brass Trimmings.	$2.50
No. 320 Black Finish.	Nickeled Trimmings.	2.50

The man or woman in the shop, in the office, in the open—the child in school—the autoist and all others who desire the comforts of a home-cooked meal.

Each UNIVERSAL Lunch Box is equipped with a UNIVERSAL Vacuum Bottle which is guaranteed to keep liquids hot for twenty-four hours or cold for seventy-two hours. A feature of this bottle is the metal spring bottle container and shock absorber which hold the bottle firmly in place and reduce the possibility of breakage to a minimum.

Another feature of great importance is the free circulation of air through the box when closed. This is made possible by a number of air vents in the top and sides. This constant circulation of air keeps the food fresh and wholesome and the lunch box sweet and clean.

UNIVERSAL Lunch Boxes are attractive in appearance and strong and durable in construction—built to stand long and severe usage. Made of heavy tin finished either in black or brown. Nos. 20 and 320 have two additional aluminum food trays, 4⅜ inches square by 1¾ inches deep.

New Machines with an Old Trade-Mark

Both are Cummer-Dowswell's

Always use C-D Wringers with C-D Washers. The Combination gives Unequalled Results.

The "MAGNET" is one of the easiest running and most convenient to operate hand washers of the many we have produced. It can be operated sitting or standing. The mechanism is attached to side of tub (instead of cover), and can be belted to either gas, gasoline, steam engine, windmill or electric motor power without any change to gearing. Cover can be lifted without removing belt or stopping power.

The "NEW CENTURY JUNIOR" is a swinging tub hand washer built on the well-known and time-tested NEW CENTURY principle, but without a rod up through centre, leaving nothing inside the tub but two rubbing boards.

Both have the same perfection in construction, materials, easy running and lasting qualities that have made our products known and used from Halifax to Vancouver.

The Fight for Durability

Chapter XV.

The art of galvanizing and producing an iron best adaptable to this purpose is brought to perfection in our process.

In the first place the purity, elimination of blow holes and defective bars and proper annealing, present the best possible sheets to be galvanized.

It is not generally known, but the pickling process has a tendency to cause iron and steel to absorb hydrogen gas.

All Armco sheets are thoroughly soaked to overcome and entirely dissolve this dangerous element.

ARMCO IRON
Resists Rust

The greatest of all advantages in galvanizing Armco-American Ingot Iron is that this pure iron will dissolve less than one-fourth as rapidly in the molten spelter as will steel.

The spelter coating applied to Armco-American Ingot Iron is therefore exceptionally pure, containing one-fourth the amount of dissolved iron found in steel galvanizing. Our close inspection eliminates all defective galvanized sheets due to stickers, oxide spots, salammoniac spots, heavy metal, etc.

From the standpoint of purity of coating and the heavy coating applied there is no equal to Armco-American Ingot Iron

The American Rolling Mill Co.

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Licensed Manufacturers under Patents granted to The International Metal Products Company.

Hardware Dealers——

An exact duplicate of the ad. below appears in the May 13th and 20th issues of "Canadian Machinery." Tear off here and paste on your window with a display of Starrett Tools.

BY INVITATION MEMBER OF

NEW YORK U.S.A.

Starrett Combination Set

A Starrett Combination Set is a complete instrument based on the original combination square invented and patented by L. S. Starrett. It combines on one grooved blade or rule three sliding heads as follows: A square, a protractor, and a center head.

Where Used

The tool may be used with any of these heads singly or in combination. It is useful in laying out all kinds of work, especially jigs, dies, etc., and in testing progress as work is done. There is a spirit level in the head of the square and also a scriber for laying out work.

Quality of Graduations

The blades of Starrett Combination Sets are graduated by the special Starrett process, which insures cleaner, sharper, finer graduations than is possible with any other method.

Two Styles

These Combination Sets are made with cast iron heads or drop forged heads, as preferred. The drop forged head is hardened and is more durable but is also more expensive. The graduations on the blade are metric or English, as preferred.

Sizes

The tool is made in the following sizes: 9″, 12″, 18″, and 24″, with prices from $3.75 to $5.75, depending on size and style.

Send for free catalog No. 20M.A.

The Standard Instruments of Precision

SAVE $150.00

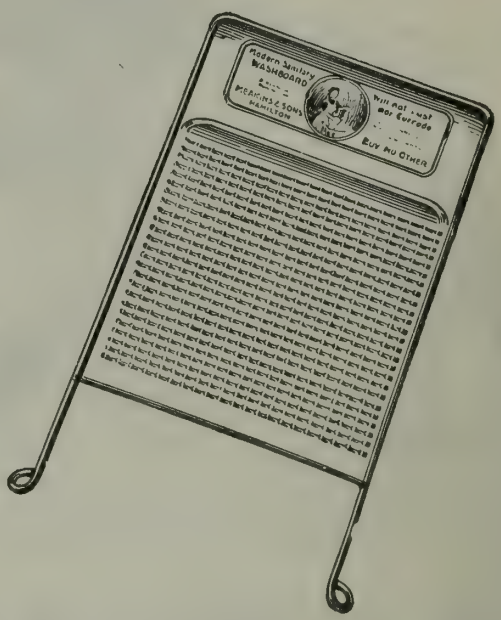
You want to buy in carload lots of course. That is the only way to buy if you are doing business in a big way.

But this does not mean that it is necessary to buy a carload of roofing, a carload of wall board and a carload of building papers all at one time.

For the average dealer this is making too much of an investment. It is tying up a lot of money for the whole year. It is not necessary for you to do this. Buy your roofings, your wall board and your building papers from us, and let us ship you a mixed carload. On these three items, for instance, you will cut your investment by two-thirds, and yet will be receiving favorable rates.

It will cost you money to buy your roofings from this man, your building papers from that man, and your wall board from still another.

Lump your requirements together and let us make up a mixed carload for you.



Write for further information to-day.

A Business Convention With A Spice of Good Fellowship

The Associated Advertising Clubs of the World will hold their Eleventh Annual Convention in Chicago from June 20 to 24

The distribution problems of the fields represented by this publication and other trade and technical journals will receive particular attention.

This convention will surpass those of previous years in size, in thoroughness, in scope and in results. The great war has broken down walls and built new ones. It has rearranged existing markets and has created new ones. The problem constantly before every wide-awake business man is, "How can I meet new conditions; how can I profit by them?"

These questions will be discussed from every one of their thousand and one angles by some of the brainiest merchandising men in the country. They will be analyzed in the broad sense in the general discussions and in detail in each of the various departmental meetings.

The convention won't be all work and no play. The lighter side of life, social frivolity, won't be neglected, but won't be overworked. Good fellowship and a spirit of jovial comradery have always been an important part of our conventions.

There will be entertainments, shows, pageants, receptions, auto drives, lake trips, and luncheons and shopping visits to the famous State Street shops for the ladies. Bring your wife, daughters and sisters. The programme has been arranged so that visitors can combine education with recreation.

President Wilson, conditions permitting, will head a notable array of speakers. Hon. W. J. Bryan, John Fahey, Henry Watterson, George Horace Lorimer, and Arthur Prisbane will be among the others heard.

Remember the date—June 20-24, the place—Chicago, and be there.

For special information, address the Convention Bureau, Advertising Building, 123 Madison St., Chicago.

Canadian Manufacturers' Opportunities

Department of Trade and Commerce Issues Report Dealing with the Possibilities of Increasing Trade with the British West Indies—The Tariff Preference and the Hardware Trade.

THIS week's bulletin issued by the Department of Trade and Commerce, Ottawa contains a vast amount of information which should be carefully studied by Canadian hardware and stove manufacturers, especially those who are interested in export trade. The report of the Trade Commissioner for the British West Indies gives complete details regarding the tariff preference and the hardware trade. About two years ago the department published a report, the purpose of which was to show the value of the various lines of manufactured goods imported into the West Indies which were marked for preference when coming from Canada. Among these lines special mention was made of the hardware trade, and attention was called to such items of hardware as came under the preference. Many articles usually included under this general term are specially listed for preference in the agreement, such as : Agricultural machinery and implements, iron and steel nails, spikes, rivets and clinches; wire—barbed, woven, fencing, and metal gates; machinery (including motor and other engines) steam boilers, electric machinery and electric dental appliances of all kinds; vehicles, including automobiles and motor cars; house, office, cabinet, or store furniture of metal, including cash registers, coffins, caskets and casket hardware; brooms and brushes; lamps and chimneys; cordage; cement; and calcium carbide.

The department has recently received a number of inquiries from Canadian manufacturers with regard to the openings in the West Indies for Canadian hardware and as a result has reviewed the situation in the bulletin issued this week. The total value of hardware imported into all the British West Indies is £1,189,446.

It would appear from correspondence with Canadian manufacturers of stoves that an attempt is being made to manufacture a line of stoves in Canada suited to the requirements of these islands. It has been pointed out in former reports that the kind of stove that finds sale in Barbados and throughout the other islands is small in size and low in price. The stoves are made in the simplest form, without any nickel or other decoration that would tend to increase the cost. One of the popular stoves is made by an American firm and shipped from New York. It is constructed to consume either wood or coal, as all stoves for the West Indian trade should be. It is of cast-iron, plain in appearance, with fire-brick lining, and comes in three sizes: Nos. 6, 7, and 8 of the catalogue of the firm in question. The factory prices are low and the stoves are supplied to customers in the West Indies at from $17 to $26. The dimensions of the stove in the different sizes, are given in the report.

Another popular selling stove is made in Scotland, one of the least expensive sizes of which is sold for $16.50. Another stove, also manufactured in Scotland, is made in two sizes and formerly sold retail at $20 and $22, but these prices have been advanced by about ten per cent. since the outbreak of the war.

Agricultural Implements.

The value under the heading, "Machinery, including implements of agriculture," is the greatest in the list of hardware imports. The machinery referred to is nearly all connected with agriculture, and includes such as is required in sugar mills and rum distilleries, for the preparation of cocoa, and for preparing and cleaning raw cotton.

Next to machinery and agricultural implements the value of the imports of carriages, carts, motor cars, bicycles and tricycles is the largest, amounting to £124,593 annually. There has been a falling off in the importation of carriages since the advent of the motor car. The imports of carts and carriages at the present time is valued at only £21,869, from which a small amount must be deducted, as in the Leeward Islands the classification includes motor cars. Only a few of these latter, however, have been imported into the Leewards. Two-thirds of all the carriages come from the United States, and only a few relatively from Canada, valued at under £1,000. In this field there is opportunity for the extension of trade, as Canadian buggies and such carriages as have been imported of Canadian make have been found to suit the market and have maintained their reputation well.

Builders' Hardware, Etc.

Builders' hardware, carpenters' and cooper's tools and hardware shelf goods which, grouped together, form such a large part of the stock of a hardware store, are included in the customs returns under "hardware unenumerated." It is impossible therefore to give any indication as to the volume of the import in these three classes. It may be stated, however, that all the hardware stores in the West Indies carry a large stock to meet what would appear to be a considerable demand for goods of this kind.

Nails, Screws, Etc.

For nails, screws, spikes and rivets there is, however, a classification in the Customs returns in Barbados, British Guiana, Jamaica and St. Lucia, showing an import amounting to £13,934 for these four colonies, of which Canada supplies £1,894, chiefly in nails. It is probable that the total import for all the colonies of nails, spikes and rivets would be in the neighborhood of £20,000, and the proportion for Canada would be greater than mentioned above, as the Leeward Islands and Trinidad import quantity of Canadian nails. The United States, however, has the principal trade.

Carpenters' tools are also imported from the United States. The United States manufacturers have been able to

(Continued on page 31.)

Saskatchewan R.M.A. Convention

Report of the Retail Merchants' Association of Saskatchewan, Convention Held at Saskatoon Last Week—Members Tell of Benefits Secured Through Membership in Association.

Special Staff Correspondence.

Scene in Saskatoon and Vicinity.

WITH a swing the Convention of the saskatchewan Branch of the Retail Merchants' Association of Canada, opened Tuesday afternoon, May 11 in the Sherman Theatre, secured for the meetings by the Saskatoon hosts. Addresses of welcome were given by His Worship Mayor Harrison, Dr. Murray, president of the University of Saskatchewan, Malcolm Isbister, Esq., president of the Board of Trade, and C. T. Woodside, president of the Saskatoon Branch of the Association. These addresses were suitably replied to.

After the replies were made an immediate plunge was made into the business, President Maybee making his report: "I want to speak to you as a business man to business men," he said, "and should you have any doubts as to the value you are getting for the investment of your fees in this Association I want you to have those doubts dispelled before leaving Saskatoon. I want you to feel that you are not only getting an equivalent for what you are paying, but probably the greatest value you ever got from any investment you ever made."

Mr. Maybee frankly confessed he had hesitated, when last year he was asked to allow his name to go before the Convention for the position of president. He then had, as he said, little faith in the organization, a fact which had no sound or logical basis. As he learned afterwards he knew nothing of it at all. Since taking office, however, he had realized the immense possibilities for good there were in the Association and was proud to be connected with such an organization. Mr. Maybee explained that soon after his appointment he went as Provincial delegate to the Dominion Convention at Toronto where he learnt the valuable service the organization is rendering to the retail merchants of the Dominion, incidentally mentioning the fight put up by the Association for doing away with the trading-stamp system.

Reviewing the work of the Provincial branch, Mr. Maybee explained how, by reason of the representations of the Association, retail merchants are exempt from the effects of the Provincial moratorium imposed by the Government in consequence of war and other conditions; and that merchants are as free as ever they were, to collect any accounts owing to them. The Small Debts Act was a piece of legislation for which the Provincial organization was responsible, and though as placed upon the statute books of this Province it is not as satisfactory as the exact measure we asked for and wished, still amendments are already before the Government, with every prospect of becoming law in a few weeks, which will make it a most satisfactory medium for the collection of debts to the value of $100. In connection with bankrupt stocks we have come to an arrangement with all the Trust Companies operating in the Province, whereby such stocks are reported to us before being offered for sale, and the local merchants are given an opportunity of purchasing these, and so avoiding cut price sales to the detriment of the regular trade. An attempt is being made to have legislation passed whereby absconding debtors will be able to be brought back and made to settle accounts in the place they were contracted, also to have an alphabetical list of property owners kept at the Registry offices to facilitate the locating of property belonging to any individual.

In dealing with the Credit Reporting and Credit Rating systems of the Association Mr. Maybee explained what a benefit they are to those merchants who are using them, saving them many hundreds of dollars in the course of a year and collecting many accounts which had practically been written off the books of merchants as uncollectable. "There is no need to pay exorbitant fees to collection agencies when our own association possesses the power in this direction that it does. Every dollar collected is returned to the merchant.

Legislation is being sought at the present session of the Provincial House making accounts for necessaries of life preferred claim against an estate on the lines of the "Food and Supply" Bill of South Dakota.

Speaking of the attitude of the retail merchant towards the farmers co-operative movement, Mr. Maybee explained how heartily he was in sympathy with the ideals of the Grain Growers' Association, and how necessary it was for us in the Province of Saskatchewan to consider the farmer, without whom there would be no province. He cautioned his hearers to be perfectly fair in their criticism of the co-operative movement, and to deal with the subject so far as is affected them in a perfectly frank and open, but fair-minded manner. Then,

no doubt a solution of the problem satisfactory alike to the retailer and the farmer would be found. "The farmer realizes that the retailer is necessary and that he has already made a great mistake in the development of the co-operative movement on the lines it has taken —the trouble is to know how to get out of the difficulty into which he has got.

In closing Mr. Maybee expressed his gratitude to his colleagues and staff for the work they had done during the past year and had no hesitation in saying that the Saskatchewan branch of the Association was the most progressive Provincial in the whole Dominion.

Secretary Raymond then read his report of the year's work, which dealt very fully with the business of the Provincial Office and Organizing Staffs. There are at the present time upwards of 150 local branches of the Association in the Province with an approximate membership of 2,000.

Mr. Raymond advocated the payment of local secretaries claiming that this policy would amply repay the outlay necessary to maintain it in more effective work of the local for the benefit of its members.

Provincial Treasurer Hutchinson read the Treasurer's and Auditors' reports which showed the Association in a satisfactory condition financially. He however, explained that a small addition to the annual fees would assure the stability of the organization and enable one or two extra activities to be undertaken. It was arranged that the subject should be discussed at an early session.

Taking it all in all perhaps the most important single question was that relating to the introduction of a mutual fire insurance company as a branch of the association. Such action was not definitely decided upon, but the way was paved, and it is probable that before the next gathering is called there will be a call for stock subscriptions.

Seem to Miss a Point.

In the resolutions presented many vital points were introduced. Strangely enough the resolution which asked that the selling of lists of names by postmasters, be made illegal, was passed over almost unnoticed. The delegates did not see in this a great advantage for their arch enemy the mail order man. They rather seemed to feel that if the post master could get a cent a name—why he probably wasn't overpaid otherwise and was entitled to it.

A feature of the convention proved to be the addresses on salesmanship and costing, delivered by Prof. Paul H. Nieстrum. A theoretical man is Dr. Niestrum, with a practical grounding and wide experience. He had some vital suggestions to make.

Those who attended the convention—who think of the absolute accord evidenced by those present, and of the volume of work accomplished — know that much of the credit goes to the president, G. A. Maybee, of Moose Jaw. It was almost a foregone conclusion that he would be re-elected. The question was would he accept. Very much the same was true of the other officers. All seemed to want the same heads. The elections, therefore resulted as follows:

Next Year's Officials.

President—Geo. Maybee, Moose Jaw.

Vice-president—W. W. Cooper, Swift Current.

2nd Vice-president—H. D. Macpherson, Regina.

Treasurer—J. L. S. Hutchinson, Saskatoon.

Secretary—F. E. Raymond, Saskatoon.

In his own way Mr. Maybee thanked the delegates. "I'm opposed to swearing," he said, "I wish some one would swear for me."

"We'll swear by you," came the reply, and the applause was deafening.

Swift Current and Regina fought it out for the honor of entertaining the convention in May, 1916. Regina won, because it was considered easier of access for the great majority. The people of Regina will have to plan well in advance if they intend to make the retailers as happy as they were at Saskatoon. The local association had done everything to provide for the comfort and entertainment of their fellow retailers. The climax, however, was reached at the banquet tendered the visitors Wednesday night. Until after one o'clock the festivities were continued—yet business started at 9'o'clock Thursday morning. As President Maybee said, in reply to a remark of B. W. Zieman, the "Dominion head. "In Saskatchewan we don't care if we never go to bed, so long as we get up on time."

W. W. COOPER, Swift Current.
General merchant re-elected first vice-president of the Saskatchewan Association.

A Hopeful Prediction.

At this banquet a significant prediction was made by F. Maclure Sclanders, commissioner of the Saskatoon Board of Trade. "In 1913," he said, "money received from the crops averaged $185 per capita of the provincial population. With only a fair crop this year, considering the extra acreage, and the high prices sure to obtain, I expect to see the crop revenue for Saskatchewan, from $600 to $700 for every person in this province.

Everyone Needs Everything.

"When this war is over there will be a huge volume of business done. Everyone needs almost everything now. I feel confident that this fall will see a big business done. In 1916 I feel there will be a big year, but 1917 in my opinion will see the greatest movement this Dominion has ever known."

THE RESOLUTIONS

TO the end of securing a more satisfactory arrangement with regard to retailing gasoline and oil, a committee was appointed to meet with some oil men. The committee evidently determined this was a question which should be threshed out openly, hence they brought Mr. McTavish, of Saskatoon, representing the Imperial Oil Company, on to the platform.

The dissatisfaction arises from the fact that the oil business is not left in the hands of the hardware and general store men. Oil is sold, all admitted, to the farmer and the city man too. Mr. McTavish, however, advised the delegates that gasoline and coal oil are never sold in less than barrel lots, though lubricating oils are sold to farmers and others in 5-gallon lots.

It was objected that this did not stop the small buyers getting goods wholesale, as one man would buy a barrel and sell it out to others.

If you'll report such cases, said Mr. McTavish, we'll act. It comes under the Pedlar's Act.

Mr. Maybee thought this trouble would effect its own cure. He told of one grain growers' group of five ordering a barrel. The first three were all right. The last two found only the barrel when they came to get their share.

No decision was reached, but unquestionably better understanding resulted

from the conference, and the president announced that the executive will take up the matter of giving the retailers better protection with all the oil companies.

Postmasters and Mail Houses.

In some manner the resolution aiming to forbid postmasters selling lists of names which, by reason of their position they are able to get, did not command very close attention.

There is no law at present forbidding this, said some.

"Do we want to stop this practice?" inquired Mr. Maybee. "Where are we to get lists if we should want to circularize?"

"Well," said Mr. Tedford, "if the postmaster is permitted to give these names, why not make it compulsory for him to give these lists when asked? Then Bill Jones would be able to get what Jim Smith could."

That the mail order houses are getting their names for cataloguing through the postmasters all seemed to agree. "But," as one said, "if they don't get their names that way they will in some other," so good-naturedly they let the resolution drop.

B. C. Fruit Man There.

Following along the line of co-operative buying was the proposal brought from British Columbia by J. M. Toombs. Mr. Toombs represented the Salmon Arm Produce Company of the Pacific Province—an organization of fruit farmers who have united in the hope of getting better prices. The action, Mr. Toombs pointed out, was rendered necessary by reason of the buying methods of the co-operative stores.

A good many questions were asked, making it seem that the B. C. men will find a good demand coming from the Saskatchewan local association.

Resolution re Drafts.

"That this convention is opposed to the minimum charge of 50c on notes or drafts that are discounted, in addition to the exchange. Each list of discounts put through bank by any retailer should be discounted at legal rate of interest on total amount of discounts, with a minimum of 50c on the total discounts."

This resolution brought very favorable comment. It was enthusiastically passed, the executive promising to waste no time in going after the needed redress.

After voting in support of the Dower law—voting without a moment's delay when Mr. Maybee explained this to be simply a law which protects a wife's interests, prevents the husband selling his home without his wife's consent—a discussion arose on the Grain Growers' Associations.

Throughout the convention the question of the Grain Growers and their plans continually arose.

Farmers and Retailers.

President Maybee brought out the fact that last fall the farmers had owed merchants vast sums, taking the debts in bulk. He told of a deputation of retailers waiting upon the Provincial Government, and how they had urged the Government to do every mortal thing to assist the farmer with his regular work. "We went further," said Mr. Maybee. "We said if the farmer wants to go into the store business, all right, but let them do so on the same basis as we do—with their own brains, their own capital. We'll never stand for the Government of this province go-into into the store business in opposition to us."

J. L. S. HUTCHINSON,
of the Saskatoon Hardware Co., Saskatoon, Sask.

There were evidences of satisfaction at this, evidences which became more evident when Mr. Maybee quoted Premier Scott as saying "the Government had not the slightest intention of lending money to help the farmers go into the retail business."

An Important Difference.

Another thing Mr. Maybee had to say re co-operative societies: "They are a success in Manchester and Liverpool, where men get their pay envelopes once a week. Here they get it once a year."

Also it was urged that the farmers' co-operative societies have no charter which permits them to sell retail. They only can supply their members.

Talk of the wholesalers supplying these co-operative societies followed. Mr. Maybe paid tribute to the jobbers in this connection, saying they had been very fair. "But," continued the president, "I don't think there is any need for us to take action against these farmers' associations. There's no use shooting a man if he is going to commit suicide."

A resolution aiming to have the minimum car load of flour reduced from 40,000 lbs. to the old 30,000 lbs. received hearty endorsement.

Following a resolution urging the executive to take such action as would enable the buying of goods on the same favorable terms enjoyed by some mail order houses and the Grain Growers, a discussion took place on barb wire.

Mr. Tedford, of Mortlake, told of figuring on wire for a farmer. He figured close, but the farmer said he could buy $100 better by mail—that was about 25 per cent. better. Mr. Tedford wanted to know why this could be.

Another dealer offered the explanation that the mail order house had probably bought before the rise in wire, and thus was enabled to undersell.

A resolution to raise the fees from $10.00 to $12.00, with no rebate to the locals, was quickly approved, as was also the following resolution:

That this convention go on record as being in favor of the inspection fees for Weights and Measures being paid from the consolidated revenue of the Dominion of Canada, the same as Customs Houses are paid to-day.

Entire approval also was evidenced for this resolution:

That the rate be so raised that the Parcel Post shall become self-sustaining, and shall not in any way be a drain upon the revenue of the country.

The next resolution read as follows:

That the executive act in conjunction without Attorney to get a proper Garnishee Act in force, as outlined in Judge Doak's letter.

"This," said the President, "simply aims to get a workable garnishee law in Saskatchewan. We can get judgments now. But what we want is a law which will enable us to get a percentage of the money a debtor earns—a law which makes it impossible for evasions by his getting paid daily and other subterfuges. The resolution at once passed

Bankers, from time to time, give advice to the merchants, as evidenced by the following resolution it will be seen the merchants of Saskatchewan have it in mind to return the compliment;

That the Canadian bankers Association be represented to give every consideration to complaints received from any district with reference to the management of the bank in that district, and that each local secretary of the Retail Merchants' Association be requested to bring any specific cases to the notice of the Association.

In explanation of this resolution, which was approved, the chairman of the Resolution Committee stated that

cases arise, from time to time, where a bank manager refuses credit to a man merely because of personal animosity. It was felt that the facts, in such cases, would only need to be presented to the bank's head office officials to effect the necessary relief—providing the banks were expecting to receive such information.

Great difficulty is experienced by dealers generally in determining if a man is entitled to credit. To enable the dealer at least to know a part of the wordly goods—if any—of which this man is possessed, it was resolved:

That the names of all property holders be arranged at the Land Titles Office alphabetically.

Evidently this may be expected to bring another benefit, for, from the testimony of many retailers, there has been an amazing freedom in registering judgments against titles. As one dealer said: "The same judgment might be—and has been—registered against several titles. Any name that is even similar was subject to this registration.

Mr. Buhler told of difficulty in making a transfer which he had experienced because the judgment served on a man named Buller had been registered on his, Mr. Buhler's, title.

Another resolution which met hearty approval was this:

That it be recommended to the Convention that retailers generally adopt a policy system of ordering goods from wholesalers or manufacturers.

This, it was felt, would ensure the dealer getting what he ordered, exactly in the way—and on the terms—he expected. It would remove the possibility of misunderstanding.

CANADIAN MANUFACTURERS' OPPORTUNITIES.

(Continued from page 27.)

meet the requirements in certain lines of these tools, which comprise planes, felling axes, hatchets, cheap hammers, braces and bits, screw drivers, etc. Some of the same articles, different in shape, are imported from the United Kingdom, such as chisels, planes, hammers, gimlets, augurs, and screw drivers, while a number of other sharp-edged tools come from the United Kingdom, being found to suit the market.

In looking over some of the hand tools in Barbados and Trinidad, it would appear that Canadian manufacturers might secure a better share of the trade in these goods, as their general appearance and price are much the same as found in hardware stores in Canada.

Japanned and Enameled Goods.

The various lines of japanned goods, such as bird cages, water cans, steel trunks, water coolers, dust pans, and a large variety of smaller japanned articles of cheap grade, are imported from the United States. Enameled ware, in heavy and light lines, principally cast-iron enamels, is for the most part English. Previous to the war a large quantity of enameled ware was imported from Germany through English houses. Inquiries are now being made for new sources of supplies in place of Germany. Prices in the United States have been higher than in Germany, and it would be well, states the report, for Canadian firms making enameled ware to look into this matter and get in touch with hardware firms in the West Indies.

Galvanized Iron Roofing, Buckets and Tubs.

There has been an attempt by some American and Canadian firms, to introduce into the West Indias various patent roofing materials of asphalt, ruberoid and other compositions, and though these patent roofings have on a few occasions been used on new buildings, the experiment has invariably proved a failure. The only roofing that will last in the tropic appears to be either wooden shingles or galvanized iron. This latter is gradually gaining its way, and is found on nearly all the principal buildings in the larger cities of the Islands. Most of this galvanized iron is corrugated and comes chiefly from England, with a small quantity from the United States. These sheets run 6, 9 and 9 feet long, with 8 by 3-inch corrugation, making a width of 2 feet. The price is 5 to 6 cents per square foot according to weight, and the sheets stocked are generally from No. 24 to 28 gauge. Galvanized iron is also used here for fencing and inclosures.

Galvanized buckets and tubs only are used in the West Indies. There are no wooden tubs or pails imported, though some are made locally from the staves of old oak molasses puncheons. Galvanized buckets run from 34 to 60 pounds to the dozen in sizes from 10 to 15 inches diameter at top. The 10-inch bucket retails for 9d., the larger and heavier buckets from 2s. to 3s. Sizes 12, 13, and 14-inch are the most saleable. A limited number of bath and wash tubs of galvanized iron is also imported.

Cement.

The total value of the cement imported, as will be seen in the table, amounts to £62,349, the largest demand coming from Trinidad and Germany, these together supplying about two-thirds of the whole. Great Britain supplies £39,759 and Denmark £10,905. A relatively small quantity only is supplied by the United States, and practically none by Canada.

Miscellaneous.

Tinware.—Throughout the Islands the supply of tinware is of local manufacture. The stores keep a full stock of waterpots, pans, cans, in tin, and supply the local tinsmith with his necessary stock of sheet tin, which comes from England.

Scales.—The weighing scales generally in use are English and American, but it is said that the English makes are not as good a value as the American. Fairbanks scales are seen in most of the stores.

Lamps and Lanterns.—A very large quantity of lamps and lanterns is generally stocked, as only in a few of the large towns is there any lighting other than by oil. Kerosene stoves are also used to some extent. Speaking generally, the bulk of the articles sold in these lines is of a cheap grade. Before the war a considerable quantity of lamps and lanterns came from Germany, but at present most of the trade appears to be with the United States.

Refrigerators.—There is a large sale for refrigerators and ice boxes. Most of the latter are made locally. The refrigerators imported are the American or Canadian patterns. A small number come from Canada and might be greater if the trade were pushed.

Mowing Machines.—There are several makes of lawn mowers in use. When it is remembered that in every month of the year the lawns require to be cut, it is quite evident that a large number of machines are needed. Higher priced machines are imported from the United Kingdom, while the cheaper grades are imported chiefly from the United States. There is a considerable demand for lawn hose and the necessary brass couplings, etc.

The report states that the bulk of hardware under the general head of "unenumerated" is supplied by Great Britain. A certain quantity comes also from the United States. Canada has but a small share under this head. There is, however, undoubtedly a field for the extension of Canadian trade in builders' materials, carpenters' tools, and wire fencing and gates, as more wire fencing is being used than formerly. In rope and cordage Canada has worked up a valuable trade, which however may be extended, and the same may be said of brooms and brushes, paints and colors. In heavy hardware, consisting of sheet and bar iron, lead, copper and zinc, chains, galvanized roofing, etc., the trade is with the United Kingdom, and there is no prospect at present of Canadian firms extending their trade in these lines. There is no reason why, however, such articles as carriage materials, fancy shelf and electrical supplies might not be imported in larger quantities from Canada.

Manufacturers wishing further details can secure same by writing to Hardware and Metal or the Department of Trade and Commerce, Ottawa.

On the Mercantile Firing Line

Address on Salesmanship by Professor Neystrom Before the Saskatchewan R.M.A. Convention—How Ideas Get Into Peoples' Minds—How Sales Have Been Lost.

So much has been said and written of salesmanship—so varied have been the angles from which the subject has been treated, that dealers perhaps become impatient at times, feeling the men who write and speak are theorists, not men who have seen service on the mercantile firing line. No such feeling prevailed when Paul H. Neystrom, Professor of Political Economy at the University Minnesota, finished his address at Tuesday evening's session of the Saskatchewan convention. Having served in a general store himself, Prof. Neystrom knows the practical side. He spoke of the psychology of selling, it is true—but it was very practical psychology. As he said: "The main thing is to bring your customer to know what you know about your goods. You want the customer to appreciate the goods as you do. This is the great problem of salesmanship."

There must in every business be buying, accounting, advertising, window dressing—but all these things are to the end that goods may be sold. And the success in this selling depends not only on the employer, but "on John and Mary who serve behind the counter."

Salesmanship in Schools.

To make sure that John and Mary do good work they must be trained. Prof. Neystrom spoke of classes in salesmanship operated in some stores; threw out the suggestion that some phases of the subject might well be taught in the public and high schools; then proceeded to his main theme—a straightforward explanation of the manner in which the knowledge the salesman possesses of his goods may best be brought home to the customer, so that to this customer will come the desire to possess.

When considering salesmanship, Dr. Neystrom asserted, psychology must of necessity come under scrutiny. The word sounds forbidding, yet psychology simply deals with the question of how ideas get into people's minds, and how they work after they get in. Salesmanship is closely connected, for it is simply getting the right idea into someone's mind, and having it work right when it gets there.

How the mind, or the brain, is reached by nerves, conveying sensation from nose, eye, ear, fingers and tongue, was outlined; then in detail Dr. Neystrom proceeded to indicate the ways in which the right sensations—the purchase compelling sensations—could be sent along these sense nerves by the skilful salesman; how not only one sense, but all the senses, should be played upon to effect the desired end: a purchase.

People are not alike. Some learn more through the eye than through the ear; some just the reverse. But, as a matter of proven fact, more learn more by the sense of touch than they learn through the eyes or ears. Some have ears and hear not; eyes and see not; but all seem possessed of a touch sense which conveys knowledge. Touch helps out all the other senses. The child knows its value. All should. Sight may prove deceptive; touch seldom or never does.

"You'll see what I mean," continued the speaker, "if you have two counters, one with goods in easy reach, one with the goods behind glass. You will find the counter where the goods can be felt by far the more popular.

How a Sale Was Lost.

"I remember," he proceeded, "seeing a salesman explain a kitchen utensil. He explained it well, and three times the woman reached out, unconsciously almost, to take hold of the article. Three times the clerk, without any discourtesy, kept the utensil in his own hands. He was interested in his talk, but when it was over the woman went out. Three opportunities to let her learn through her sense of touch as well as her sense of hearing the clerk had let pass.

"Mail order houses," said Dr. Neystrom, "can not appeal through the sense of touch. This is a big loss, and one which they feel, for, as the advertising manager of the Sears Roebuck Company said to me: 'We write descriptions so those who read will imagine how things feel.'"

In a St. Paul hotel Dr. Neystrom had heard a salesman for the National Cash Register of Dayton explain a new telephone register to a department store dealer. Several times the dealer reached out to make some connection, but always the eager salesman anticipated his wish. The merchant seemed impressed, but left without placing an order. Then the vice-president of the Dayton Company, who had been at the back of the room with Dr. Neystrom, laid his hand on his salesman's shoulder and said: "Why the devil didn't you let him handle the machine!"

The man had missed making his appeal through the sense of touch.

This is a big point in selling shoes. If possible get the shoe on before it is inspected. If it feels right, that goes a long way toward making it look right. So with clothing—yet here the clerk should say how well this fits. Make the point through the feeling, the appearance and the assurance. "Handle the articles," advised the speaker, "as if you appreciated them. That brings sales."

Touch and Life Insurance.

A life insurance agent accounted for his success by saying he carried always some cards bearing a few facts about his policies. One of these he would give his prospect. Thus he secured the cooperation of the sense of vision in conveying the impression he desired to the mind, and at least he prevented the sense of touch from working on foreign things.

The Poker Face.

Clearly the speaker made another point, that every idea which enters a customer's mind tends to be expressed. Something will be said of the goods, or by some—perhaps slight—facial movement. Approval or disapproval or disinterest will certainly be evidenced. The best sales people are those who are able to read these expressions. It is not easy. Many strive to hide their feelings. You buyers acquire a poker face for presentation to the commercial travelers, yet often the expression can be read.

Never is it possible to be sure of what will satisfy a customer. Customers are different at different times. But start off, get the right expression, then follow along that line.

Also important is getting the prospective buyer in the right frame of mind. "One salesman," Prof. Neystrom declared, "always begins his work with a question to which the customer can not give other than an affirmative answer. He gets him in a yes saying habit."

Get some opinion from your customer whatever you do, urged the speaker, if you can't in any other way make a statement, and say "Don't you think so?"

Proceeding, were related, the experi-

(Continued on page 45.)

Discussion on Co-operative Buying

Most Important Discussion at Convention on Co-operative Buying—After Thorough Debate a Decision Was Made That the Locals be Encouraged to Co-operate in Buying.

PERHAPS the most important discussion arising from the resolutions presented by the hard-working committee entrusted with that phase of the convention's work, was the discussion on co-operative buying. All shades of opinions were given utterance, and only after a thorough debate was what might be called a middle course adopted—a decision that the locals, during the coming year, do all the co-operative buying possible; that the experience of each local be forwarded to the central executive; and that this central executive act as a clearing house of ideas, advising all the local branches of the successes and failures being achieved.

One delegate told of a movement on foot in his locality which it was believed would be of great value to general merchants. In dress goods, it had been found, one small town dealer could hardly sell in his locality the four lengths which usually had to be bought. Therefore a method of exchanging these lengths with neighboring merchants had been adopted.

Mr. Tedford of Murdock, urged the association, as a provincial association, to go into co-operative buying. He thought the time to start is now.

Praises Grain Growers.

R. A. McGee, M.P.P., of Wolseley, took the same stand. "The Grain Growers," he said, "have been teaching us our business. Why don't we order 300 car loads of salt. We could get it much cheaper. Why don't we order 300 car loads of coal? I know many who are getting their coal from the Grain Growers, because these Grain Growers place 300 car-load orders. The people can buy to best advantage through that association, and they are, therefore, right to buy from them. Let us do business on business lines and we won't have to worry about competition from men whose business it is to grow grain. At present these men are teaching us.

To this argument Sam. McMicken of Moose Jaw, took exception—strong exception. We were advised this morning not to load up with stock, he said, that is just what we would be doing by such buying. Buy in 100 car load lots and the goods would be left on our shelves—such orders would shelve us. As for those apples the Grain Growers bought, proceeded Mr. McMicken. "I want to say if we had sold them we would have had them back on our hands."

"Now Gentlemen," interposed President Maybee, "give us some suggestions as to how we are to do some of these things you urge. If you passed a resolution expressing the wish that I had a million dollars I would thank you, but I would be more glad if you would show me how to get it."

Mr. Johnson of North Battleford, held that to start in a small way would prove much the wisest plan—the circles could be made larger all the time.

Buy Only Few Things.

So felt Mr. Kindread of Glen Avon. Only a few things, he felt, could well be bought in a co-operative way—as a general rule it would be much more profitable to let the wholesalers carry the stock.

A new viewpoint was given by Mr. Evans of Outlook,—the difficulty of getting satisfaction under co-operative buying. "Would you let anyone else buy 100 suits of clothes for your store?" he enquired. Only for standard goods was the idea practical.

Mr. Zeider, the Dominion President was roundly applauded as he rose to speak on the question, and his points were greeted with approval though all evidently did not agree.

"You want to go over the heads of the jobber," stated Mr. Zeider. "Now, the jobber is a necessary evil in the same sense that we retailers are necessary evils. I heard a salt man at London the other day say that after years of investigation, his company had determined that the cheapest way of getting salt into the hands of the dealer was through the jobber."

Mr. Zeider questioned the consistency of the plan under discussion. "We don't believe in the big fellow getting advantages which enables him to put the little fellow out," he said, "and yet we're proposing to become big fellows more or less for that reason. Some wholesalers have one price to everyone. That is the right thing. Before long the man who gives a big buyer a preferred rate is going to come out at the small end of the horn. Oh yes he is. I know a stove manufacturer. He made a model which he sold the trade at $12.00 and which they resold at $15.00. It was a good stove and was in big demand. A mail order house asked the manufacturer what price he would quote them for 1,000 stoves a year. He named $11.00 and the deal was concluded. Note the result. The mail order house catalogued those stoves at $12.00. Thus they killed the trade of the retailers throughout the country. They, therefore would not buy. For that 1,000 stove order the manufacturer lost his other business.

A Danger for Manufacturers

An even more startling example was quoted by the Dominion President—an example relating to underwear. The mail order house agreed to take the entire output of the factory. At the end of the year they demanded a lower price. The manufacturers' other market was gone. He agreed. Next year a still further price reduction was asked. The manufacturer refused, and then had to commence building up the connection he had lost.

President Maybee thought these very examples showed the power of the large buyer, and gave Mr. Zeider some idea of the huge buying power the merchants there assembled possessed. "Why," he said, "I know dealers in towns half the size of the one you live in down in Ontario, who make five times the turn over made by your best dealer. There are merchants here who sell men who come 75 miles to make their purchases. There are little towns in this province whose merchants would have a combined buying power of $250,000. They are very little towns too.

This terminated the discussion on this point, it being decided definitely to try the co-operative buying only through the locals.

FIFTEENTH TOURNAMENT.

By permission of the Department of Militia and Defence the Dominion of Canada Trap Shooting Association will hold its 15th annual tournament, June 8, 9, 10, 11, at Rockcliffe Ranges, Ottawa. This tournament is of particular interest to Hardware and Metal readers, since its purpose is the promotion of trap-shooting as a Canadian sport. Local gun clubs furnish attractive and healthy amusement, and afford a continual outlet for sportsman's supplies.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, MAY 22, 1915 No. 21

ONE OF the great secrets of the success of the catalogue and mail order houses is that the goods are so well described and illustrated, as well as priced, that the prospective customers get a mental impression of an article that appeals to them; and there grows up a desire to buy.

* * *

ONE OF the speakers at the Saskatoon Convention emphasized the fact that success in the selling end of a business depends not only on the employer, but on the clerks who serve behind the counter. Learning and knowing the goods is not all there is to the game of salesmanship. It takes individual skill and initiative to know how to handle the different kinds of customers who visit the store. The salesman must know the goods, be polite, be cheerful and back of it all he must have a will of his own and a spark of aggressiveness which will give him a compelling power to induce customers to buy. Proprietors can do a great deal towards making competent salesmen of their employees. A little time spent each week in instructing the salesmen in the art of handling customers will be time well spent and will result in many sales being made which might otherwise be lost.

The Metal Markets

A GREAT deal of interest centres around the metal markets at the present time. There is a very good demand for metals used in the manufacture of war materials, but domestic trade is very quiet. There are, however, a number of interesting as well as disturbing features. Especially is this true regarding spelter. For some years prior to the war spelter did not show any great variation and with a few exceptions prices were much the same week after week. Since the outbreak of the war the Belgian and German markets have been closed and the advance in price has been phenomenal, eclipsing in comparison any movement in prices that has been seen in the world's metal markets. There is now a mad demand for spelter and prices being paid are nearly three hundred per cent. higher than those which prevailed a year ago. The shortage—or alleged shortage—and the high price of spelter has caused grave anxiety among manufacturers. A great many hardware lines in the making of which spelter is used, have been advanced in price and if present prices continue, many other products will have to be advanced. The spelter market at present is practically controlled by United States producers. During the past few years the United States has been the world's greatest producer of spelter. In 1913 the United States production of spelter was 31 per cent. of the world's total. Germany held second place and Belgium third. Some Canadian ore is shipped to the United States and smelted in the latter country. Antimony has also reached a price that beats all records. Aluminum, which for some time past has remained steady and unchanged, is developing strength and prices have advanced during the week. Copper and tin continue to remain at high prices, while lead is about the only metal that has not shown any market changes since the outbreak of the war. Lead is certainly very cheap compared with other metals.

The Saskatchewan Convention.

IF those who attended are to be the judge, the second annual convention of the Saskatchewan branch, Retail Merchants' Association of Canada, held at Saskatoon, Sask., was a huge success. Certainly more was done—and perhaps more learned—than in any other three days the Saskatchewan dealers have spent together—and this is said remembering two splendid gatherings, the organization meeting in Regina in 1913, and the first convention in Moose Jaw. There was a seriousness of purpose evidenced, and a fairness in treating all subjects. It was a notable fact, that of the 400 delegates in attendance, practically all were at every session.

One of the most significant statements made at the convention was that of F. M. Sclanders, Commissioner of the Saskatoon Board of Trade, who stated that in 1913, money received from the crops averaged $185 per capita of the Provincial population, and that with a fair crop this year, considering the extra acreage and the high prices sure to obtain, he expected to see the crop revenue for Saskatchewan from $600 to $700 for every person in the Province. Nearly all the merchants present at the convention are confident that there will be a big improvement in business conditions.

Many vital points were introduced in the resolutions presented. It seemed to be generally agreed that the large mail order houses are getting their mailing lists from local postmasters. While some retailers thought the postmasters should be forbidden to sell mailing lists, there were others present who were of the opinion that no action should be taken in the matter, owing to the fact that mailing lists could be secured by the retailer from the postmasters and used for circularizing. In this connection it is interesting to note that some small general store merchants, who are postmasters, continually kick about the inroads of mail order competition, and still for a paltry sum

are willing to provide mailing lists for the mail order houses.

The old-time question regarding fees for inspection of weights and measures was also dealt with and the convention went on record as being in favor of the fees being paid from the consolidated revenue of the Dominion of Canada. The addresses by Professor Neystrom on salesmanship and the financial side of a retail business were exceedingly interesting and have been reproduced elsewhere in this issue. The question of co-operative buying which has been discussed at a great many conventions during the past year, was one of the most interesting questions taken up at the Saskatoon meeting. After considerable discussion it was decided to try co-operative buying through local associations only. Elsewhere in this issue there appears a complete report of the convention proceedings. The report will not only be interesting to Western Canada retailers, but to retail merchants all over Canada, on account of the many strictly retailer's business problems which were discussed.

Selling Electrical Specialties.

IN featuring goods suitable for June weddings, hardware merchants should not overlook the suitability of electrical appliances as acceptable lines for wedding gifts. The electric appliance line is a highly profitable line and a nice one to handle—has become very popular during recent years and every bride looks forward to receiving as a gift, or at least owning, a number of the latest electrical appliances.

Most electrical appliances present a very attractive appearance with their highly finished surfaces and attractive designs. It is hard to imagine a more attractive or interesting window display than one in which is shown a well arranged display of modern electrical appliances for use in the home. Silent salesmen can also be used to splendid advantage in arranging displays of electrical fixtures. Displays, if properly arranged, will attract the attention of passers-by, and also of customers. One of the most important features, however, is the fact that the electrical appliance line can be so easily demonstrated. A small table can be arranged for demonstrating purposes and electric irons, toasters, samovars, coffee percolators, etc., may be heated in a few minutes and demonstrated to customers without causing a loss of time.

June Wedding Gifts.

IT is generally admitted that some branches of the hardware trade have been seriously affected by conditions during the past year, and especially since the outbreak of the war. Building operations have been curtailed and the demand for building supplies has been more or less restricted. When building trades are affected the hardwareman suffers in consequence—that is as far as the builders' department is concerned. There is one redeeming feature, however, and that is that the hardware store of to-day is not like the store of fifteen or even ten years ago. The average hardware store to-day carries such a varied line of hardware and household goods that if business is slack in one department, owing to conditions over which the hardwareman has no control, he can devote more time and attention to other departments and thus keep up the volume of sales, so that a favorable comparison can be made with previous seasons.

The hardwareman of to-day is selling large quantities of goods which were not carried by the hardwaremen of ten years ago—in fact many lines now carried in stock by retail hardwaremen have only been placed on the market during recent years. The result is that the hardwareman always has a number of seasonable lines of goods on hand, and if he so desires he can put forth special efforts at almost any season of the year and push one or more seasonable specialties. And just at this season there looms up the June wedding trade. During recent years an ever increasing volume of June wedding gift trade has been secured by retail hardwaremen and next month should be no exception. War or no war there will be a large number of June weddings—probably not as many as in peace times, but nevertheless there will be a sufficiently large number to create a big demand for wedding gifts and household goods. From now on the hardwareman will have a good opportunity to push the sale of cutlery, silver plated ware, cut glass, electrical goods, etc. Wedding gift windows are now quite numerous in the department stores in the big cities. Who is going after the trade in your town?

The "Get-Together" Spirit Again.

IN last week's issue there was an editorial dealing with a meeting of farmers and business men in a certain district in a Western State. Canadian Grocer is pleased to note that this "get-together" policy of farmers and merchants is not confined to the country to the south of us.

In the town of Petrolia in Western Ontario there was a similar meeting last week. The business men of that town representing the Board of Trade, entertained the officers of the Lambton Corn Growers' Association at a luncheon. Various speakers outlined a number of things in which the merchant and the farmer could co-operate to make things better for both of them. The speech of the evening was delivered by G. G. Bramhill, who spoke on the subject, "The Production of Lambton County."

While the report does not say there was any discussion given over to the necessity of home buying if the best interests of the community were to be served, nevertheless joint meetings of this character are sure to help cement the relationships between the farmer and the merchants of his home town. It is a fact that every merchant does not cater to the farmer as he should, and this gulf could be almost entirely bridged through more newspaper advertising. This should tell the farmer frankly what the merchant has to sell, its merits and its prices. Without doubt the lack of sufficient publicity is one of the big reasons why so many country people are to-day dealing with the distant mail order houses.

Then again, there are merchants who buy things out of town when they could easily purchase the same article from their *confrères* in other lines of trade. This sort of petty jealousy is contagious and once farmers know what is going on, the contagion is very likely to spread to them. The retail merchant should first set a good example if he is anxious to see the farmer buy his goods at home and to see the home town and community prosper.

Financial Side of Retail Business

Speaker at Saskatoon Convention Takes up the Financial Side of a Retail Business—Unwise Buying and Over-buying Two Bad Faults—Omitting Unnecessary Expenses.

OUTSIDE of a bank it is doubtful if so many cents were ever gathered together in Saskatoon, as were shown at Wednesday afternoon's lecture on the financial side of a retail business. Prof. Paul H. Neystrom had twenty-five of these coppers, and used them to telling effect as illustrating where the supposed profits of a business go, and what is left as actual profit.

Starting upon the supposition that he, a retail dealer, had sold goods which cost one dollar, for one dollar and twenty-five cents, Dr. Neystrom began doling out the cents in settlement of various charges.

First there was the expense of buying, which he estimated as using up two of the cents. Then there came selling, which roughly used up six more cents. Advertising, a necessary part of a business, he stated should use up about two cents, while one cent on the dollar should cover delivery charges.

Employer a Teacher.

"An employer is no longer a boss," continued Dr. Neystrom. "He is a teacher—and that is a big part of his work. That work, and store management can perhaps go hand in hand, and to cover this expense, I believe we will have to set aside two of our pennies."

Then, he proceeded, there is rent. If you own your building you still should charge yourself rent, for if you were not occupying it, you would be able to get rent from some one else. "Rent," it was stated, "is an exceedingly hard charge to estimate. It differs very widely in different localities, and in different businesses.

"In some cases one-half cent on the dollar turn-over satisfies this claim, but I know of one store in New York—a store doing a highly successful business—where 14 cents on every dollar's business goes in rent. Perhaps, for our purpose a charge of 2 cents is fair. There go two more coppers," and another little pile was made on President Maybee's table.

Heating and lighting was another necessary charge mentioned, and to provide for this one cent was set aside.

Insurance and taxes—taxes being considered a charge on the business—were next treated—another cent.

Repairs, renewals, general depreciation required the setting aside of still another cent.

Consider the Investment.

Then there came a consideration of the interest on the investment in the business. This must be considered, for if not invested there a merchant could draw interest on this money, from the bank, from mortgages, or from some other source. This interest on investment, it was estimated, would require the setting aside of two more cents.

Then there must be remembered the loss suffered from bad debts on credit business, and losses of theft—theft of two kinds, visible thefts from the cracker barrel and the apple box, and unseen thefts. Usually a cent had to be apportioned to offset this loss.

For miscellaneous expenses, telephone, twine, paper, telegrams, etc., another cent had to be provided.

Only Three Cents Left.

Here it was found 22 cents had been set aside, and holding up the remainder, "there," said Dr. Neystrom, "there is your actual profit on that sale of goods costing one dollar for one dollar and a quarter—three cents."

The smallness of this actual profit naturally led to the consideration of possible savings,—Could not these charges be cut down?

In buying Dr. Neystrom stated one of the great mistakes is overbuying. Often this is done as a speculation—Sometimes to get a special discount. "Leave speculating alone," came the advice, "let the speculator take those chances, not you in the retail business."

Often too there is unwise buying. A man should get what the community wants. "You are there to supply, not so much to educate the customer."

Buying from too many sources was also considered a grave mistake. This means too much expense in correspondence in looking over samples, etc.

Buy in Time

Still another failure as regards buying is failure to buy in time. That means the clerk must say, "sorry but we are out of that." Orders should be small and placed often.

Some buyers are unapproachable. That also was considered an error. One big store has this motto for its purchasers. "Look at every thing that comes your way." They don't necessarily buy, but are ready to do so if they see something worth while.

A big loss often occurs from failure to check up goods—to see if they are as ordered, are in good condition.

Then care in unpacking is also most necessary. It is worth while to teach the clerk how to unpack. It means a saving.

Poor storage, a leaky roof, dust, vermin, all these things bring loss. So also does too much handling.

In selling, poor display, selling goods in a hit or miss fashion, bring loss. This causes merchandise to accumulate. "You know those lines that linger." said the speaker. "We call them stickers when they seem to form an affinity for the business." He offered a very simple suggestion for overcoming this evil. Put newly bought goods at the bottom of every pile and sell from the top.

Don't Over-Measure

Another selling loss comes from overmeasurement. Take goods costing $1 a yard for example. A salesman gives one inch over. Now one thirty-sixth of the dollar, which that inch represents, is the 3 cents actual profit which we have just discovered by our illustration of the coppers. "This practice of throwing in, is bad business—one of the unnecessary expenses. A customer is entitled to full measurement, but full measurement only."

A Good Parcel Makes Good-Will

Money, it was stated, is often wasted in a too lavish use of wrapping paper and twine. Saving in that direction, however, has to be carefully made. It is the height of folly to make a poor parcel—one which will break open. A good parcel makes for good-will, a poor pacel for bad-will.

Speaking on salesmanship, and its power to reduce the cost of doing business by increasing the volume of the sale with little or no addition to the running expenses, Dr. Neystrom told of going with his wife to buy a canary.

The bird cost $1.75, then the clerk suggested a large cage was desirable. It was bought at a cost of $3.75, food, cuttle fish bone, a spring for the bird cage, a hook to hang the spring from, a bath tub for the bird, a fender to prevent the water from the bath splashing—all these were suggested and bought. The total purchase amounted to $9.25, and "said Dr. Neystrom." "The customer liked it. That kind of suggestive salesmanship is always appreciated if properly done."

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—Made-in-Canada—Customer Needs Education — Canada's Exports — Shell Production.

Made-in-Canada.

From the Contract Record.

THE "Made-in-Canada" idea is a curious anomaly, in that it combines the best and the worst business principle—the best in the idea of having Canadian goods occupy a position of pre-eminence by virtue of quality and value, and the worst in that of using the cloak of patriotism to cover the foisting of inferior goods at a higher price.

In theory there is much to commend the "Made-in-Canada" movement; in practice there is much to restrict it. If we are going to promote it successfully we must put reputation first and dollars last; we must make "Made in Canada" synonymous with "Made RIGHT in Canada."

Quite recently we heard of a large restaurant owner who wanted a couple of hundred bentwood chairs bearing the "Made-in-Canada" label. He had to pay the same price for the Canadian chair as for the Austrian chair, and he got a distinctly inferior article; he paid 25 or 30 per cent. for his "patriotism."

Not long since a well-known United States advertising journal conducted a careful inquiry into the wisdom of fostering the "Made-in-U.S.A." idea, and the expression of opinion contributed by the heads of some of the largest concerns in the United States was distinctly unfavorable. Perhaps the best sentiment is expressed by one of the contributors in the following extract: "Of course I am a believer in American goods; but an ounce of doing is worth a ton of preaching. When our manufacturers have produced things that are a little better than similar things produced elsewhere you may be sure that the people of this country will buy them."

Pre-eminence in competition is the only sure foundation of success. Essay to build up the business of the country under the protection of a high tariff wall, if you will; allow your manufacturers to combine and put up their prices, the while delivering inferior goods—and your whole structure will crumble and decay.

There is no use in our running wild on the "Made-in-Canada" slogan. Neither as manufacturers nor as consumers will it pay us to isolate ourselves from the outside world. The benefit would accrue only to the select few. Canada first and Canada last—but VALUE FOR VALUE, AND COMPETITION ALWAYS, if we are to remain a factor worth considering in the industrial world.

* * *

Customer Needs Education.

From the Hardware Trade.

THERE is a great deal said about educating the merchant for better business. There is another man who needs education and he is the customer.

Many merchants say to sell the people what they want. A better plan is to discover what your customers ought to have, put it in stock, talk it and soon many people will discover that they did want what you want them to want.

On the other hand if a customer comes into your store for a certain brand of saw or hammer and the tool is a good one and well advertised, it would not be salesmanship to try to persuade him to change his mind, but the customer who comes in and simply wants a saw and thinks that one for 50 cents or 75 cents is good enough, is the customer that needs education and now it is time to bring salesmanship into service and sell a saw for $1.50 or $2.00. The customer will get better value and the merchant will be doing a good turn for himself. Therefore, persuade the people to want what they ought to have.

This is the way to build a business and keep ahead of a jealous competitor who only knows how to cut the price on what the public have been wanting.

* * *

Canada's Exports

From The Financial Post.

NOT for many years have the March exports been as large as those for which the preliminary figures were issued during the present week. The increase in domestic exports was approximately $20,000,000 and the decline in imports was approximately $13,000,000. The result is that there was a credit balance—a very unique result for March trade. Usually during that month as during spring months of the year the imports are very heavy and the exports light. The present trend, however, is somewhat different, as evidenced by the following comparative figures:

	March Trade.		Adverse
	Exports.	Imports.	Balance.
1912	$24,980,769	$58,053,085	$33,072,316
1913	34,874,752	67,603,976	32,729,224
1914	26,700,991	53,111,104	26,410,113
1915	45,118,922	40,441,384	*4,677,538

*Credit Balance.

The foregoing figures are very reassuring. Closer analysis of the figures shows that all classes of exports have been favorably affected and not alone those from the factories turning out war material. It is true that under the head of manufactures the increase has been from six millions in 1914 to fifteen millions in the present year, but at the same time the agricultural products have doubled in value, and those of animals also show a very substantial increase. The only decline is in the case of products of the mine. The latter will be changed very soon as in many mining districts there is increased activity because of the demand for Canadian mineral products, especially nickel and copper. In other metalliferous undertakings there is increased activity.

* * *

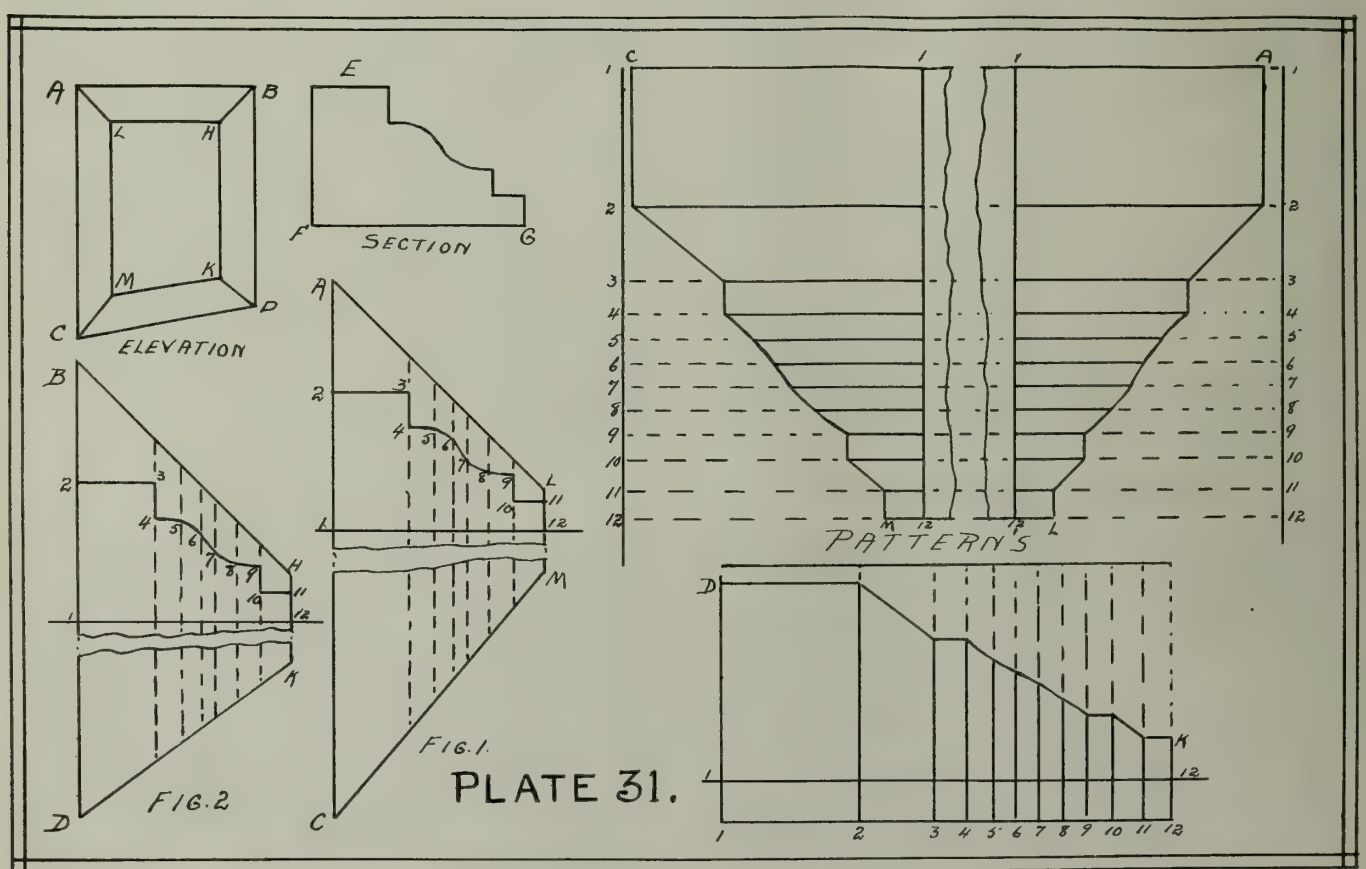
Shell Production.

From Canadian Machinery.

HOWEVER much or however little has already been done to develop shell production in our Dominion, it is quite apparent that a great deal more is required, even neglecting the leeway which should but never may be made up. The meantime greatest trouble connected with Canada's shell industry belongs to the supply of shell forgings, it being a matter of more or less common knowledge that while the capacity of our machine shops is the equivalent of some forty thousand finished 18-pounder shrapnel shells per day, our forging plants in existence are able to meet this rather over half-way only, or to the extent of 23,000 forgings per day.

Practical Course for Sheet Metal Workers

Article No. 31 of Series



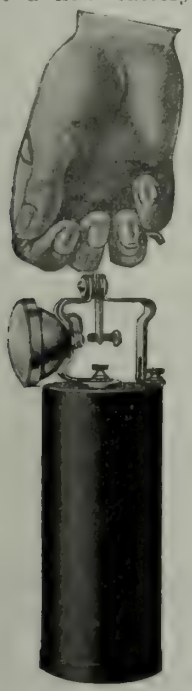
By CHARLES SEIVERS

IN this article is shown the method of cutting pattern for a mitre in a moulding forming a panel as shown by elevation A-B-C-D. it will be seen there are three different angles shown. At A and B are two right angle or square mitres, at C, an acute angled mitre, and at D an obtuse angled mitre, but while the angles in each of the three cases are different the method of cutting pattern remains the same. At E-F-G is shown a section or profile of moulding to form panel. The first step is to lay out the angles and procure the mitre lines. At A-L.C.M. in Fig. 1, are shown the angles at corresponding letters in elevation and at B-H-D-K at Fig. 2 the angles at corresponding letters at elevation. Having laid out angles place or draw an outline of section in same, as shown, and divide the curved members of the moulding into a number of equal parts, the angle of each straight member forming a division, as showing by1-2-3 4-5-6, etc., from each of these points draw lines, extending them until they intersect the mitre lines at A-Z and C-M. To lay out patterns draw a line at right angles to C-A. On these lines begining at C and A set off the divisions on section as shown by 1-2-3-4, etc., at Fig.1. Now draw lines joining points 2-2, 3-3, 4-4, etc. At a convenient point on C-A draw a line at right angles to it as 1-12, using this line from which to set off distance, and obtaining the distances by measuring from line 1-12 at Fig. 1, to the mitre line C-M, then setting off distances obtained on lines numbered the same.

The accompanying article is No. 31 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

As points 1 and 2, 3 and 4, and 9 and 10, come on same line or in line with each other, the distance from line 1 to 12 to the mitre line is the same for both points. Having set off all the distances from 1 to 12 a line drawn through the points thus obtained will give outline of pattern.

The old impression that only mechanics were interested in tools has died out, and a large business is now being done with men, who have a hobby for tools, but who are not full-fledged mechanics by any means. The shop window should always play an important part in the introduction of new tools. It may be that there will not be an immediate response from those desiring the tools, but it has been proven that enquiries have often been made several months after the displays have been made.



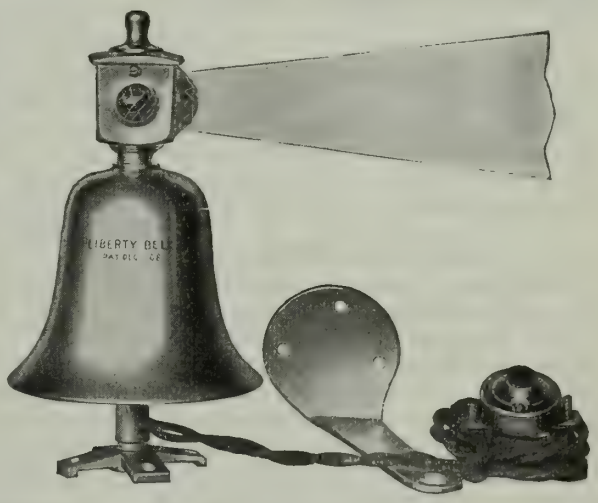
New Hardware Goods

Offered Canadian Hardwaremen

VERILITE ATTACHMENT.

The Duncan Electrical Mfg. Co., Limited, 86 Grey Nun Street, Montreal, Que., have just devised and placed on the market a new battery lantern attachment to be sold under the trade name of "Verilite."

Verilite Attachment.



The makers claim for this device a very much more efficient reflector and lamp with all the parts fully insulated in order that no loss of current is possible. The attachment fastens on with the two screws provided on batteries, and is very simply attached in this respect. The carrying handle is made to swing over to either side of the device when battery is placed on the side for convenience. Moreover, this device is made to centre on top of battery, making the most desirable balance in carrying. The hand is not cramped by placing through a small aperture as is usual with this type of fixture, and in all the manufacturers have endeavored to give high value.

Also this is made to place on the market at a retail price to the customer of $1, packed in small cartons highly suitable for shelving.

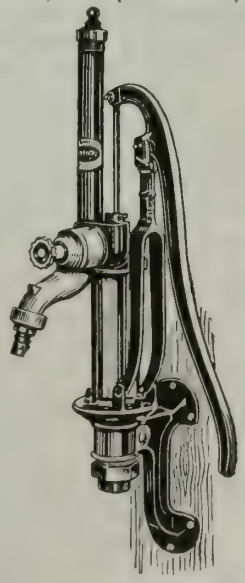
The "Verilite" operates on any style of common battery.

THE LIBERTY BELL.

The Liberty Bell Co., 346 the Arcade, Cleveland, Ohio, offers to the Canadian trade the Liberty Bell here illustrated. The bell is claimed by the makers to be a real innovation in warning signals that conveys its message to both eye and ear, and because of its insistent and distinctive tone compels instant attention. The light is equipped with an 8 volt Tungsten bulb, ruby red lenses, and flashes a bright red light whenever the bell is rung. The bell is made of finest bell metal and is economical to operate. It is said to require less than one-fifth the amperage required to operate a small horn. It has a loud clear tone that has a great carrying quality. The bell can be easily and quickly attached to any part of the car, either on the mudguard, the side of the car or under the hood as desired and can be operated by hand or foot. The bell is made in two sizes. The interior mechanism of the bell is described by the makers as follows:—

The Liberty Bell.

The standard for the "Liberty Bell" is made of special malleable iron, very strong and durable. The coil is made of waterproof, enameled copper wire. The core and armature of Norway iron. The spring of phosphor-bronze. The contact points of Platinum. Heavy rubber insulation throughout. Mechanism is not affected by dirt or water.



B.T. BRACKET HOUSE PUMP.

Beatty Bros., Limited, of Fergus, Ont., and Winnipeg, Man., are introducing to the hardware trade the B.T. bracket and house pump. The makers state it is an inexpensive and very convenient house pump for use in kitchens and summer cottages. It has a strong malleable iron bracket with which to fasten it to the wall above a rolled rim sink so a cumbersome wood frame is not needed. It can be used as a lift pump or as a force pump for forcing water to the attic storage tank.

The bracket, handle and spout of the pump admit of such a variety of adjustments that it is perfectly adapted to any installation. The bracket is reversible. It fits the pump just as well when turned upside down as when in the position desired, firmly secured by a half turn of a bolt in the bracket. The spout, too, turns independently of either bracket or handle and when the former are fastened can be placed in any position desired.

It was originally designed to take the place of the German clock or wing pump, and the makers claim that it does the work better for it has a larger capacity lifts easier, can be more readily repaired and lasts longer.

It has a nickel plated brass body, 3-inch cylinder, and parts nicely finished.

B. T. Bracket House Pump.

Current News

Readers are requested to send in, for publication on this page, news items of interest to the trade.

New Firms.

Tugaske, Sask.—Frank Phillips, hardware merchant, has opened a branch at Darmody.

Regina, Sask. — The Saskatchewan Broom Manufacturers, Ltd., have started in business.

Business Changes.

Walkerville, Ont.—Nelson Bros. have sold out to H. J. Hicks.

Vancouver, B.C.—Johnson & Salsbury have been succeeded by Johnson & Salsbury, Ltd.

Hensall, Ont.—Wm. McLaren has purchased Moore Bros.' hardware business. The latter intend to enter the manufacturing business.

Hardwaremen Enlist.

Haileybury, Ont.—A. R. Turner, formerly bookkeeper with the George Taylor Hardware Company, of New Liskeard, has been accepted for the fourth contingent. Another well known business man who has been accepted for this same contingent is William A. Ferguson, of the Northern Canada Supply Co., and formerly junior partner in the hardware firm of Montgomery & Ferguson.

J. N. Niven Married.

Saskatoon, Sask.—The marriage took place here recently of Miss Beatrice Mannering to John Noel Niven, manager Saskatoon branch of the J. H. Ashdown Hardware Co. Among the many gifts received was a writing desk, with chair, from the local staff of the firm; a silver tea service from J. H. Ashdown, and a case of silver flatware from the staff of the head office of the J. H. Ashdown Hardware Co., Winnipeg.

Obituary.

St. John, N.B.—The death occurred here after only one week's illness of pneumonia of James E. Earle. Mr. Earle was fifty-eight years of age, and for twenty-one years was associated with the hardware firm of T. McAvity & Sons.

Sackville, N.B.—The death took place here of W. B. Dixon, who a number of years ago was engaged in the manufacture of stoves, and was managing director and secretary of the firm now known as the Enterprise Foundry Co. About ten years ago he retired from business life.

Toronto, Ont.—Charles Leonard Weisner, 58 Russell Hill Road, general manager of the National Fire Proofing Company of Canada, Limited, died very suddenly at his home last week.

To Start Operations.

Hamilton, Ont.—The Hamilton Lock-Nut and Specialty Co., Ltd., has taken over the People's Brewery building, and will commence operations shortly. The directors of the concern are: M. J. Dunham, A. N. Wells, W. J. Sutterby, W. H. C. Stroud, J. T. Stroud, O. W. Gibb, William Butlee, J. E. Davies and J. W. Anderson. The officers elected were as follows: M. J. Dunham, president; J. T. Stroud, vice-president and secretary-treasurer.

The Honor Roll.

Winnipeg, Man.—W. H. Kelly, a member of the 106th Winnipeg Light Infantry, and a former employee of the J. H. Ashdown Co., has been wounded.

Bowmanville, Ont.—The Militia Department has announced that Sergeant Kenneth C. Martin, hardware merchant here, has been killed in action. Sergt. Martin was among the first to enroll when recruiting began here for the first overseas contingent. He handed his hardware business over to his father, who has been a commercial traveller for Caverhill, Learmont & Co. for several years, and is widely known to the trade.

Windsor, Ont.—Word has reached here that James White has been wounded. Before enlisting, Mr. White was employed at the Windsor Hardware Co. store.

Toronto, Ont.—Word has been received of the death of Corporal Chas. Wallace, of the 12th York Rangers. Mr. Wallace was for five years a traveller for Beardmore & Co. Corporal Wallace had considerable experience in the army, being stationed with the Bombay Light Horse in India for some time.

Toronto, Ont.—Sergt. Edward H. Lewis is among the wounded in a Bristol, England, hospital. Prior to the war Mr. Lewis conducted a hardware business at 88 Geary Avenue.

Winnipeg, Man. — Among recent casualty lists appear the names of A. E. Ward, an employee of the wholesale department of the Ashdown Hardware Co., and Lyell Macnamara, another employee, wounded.

Ontario Incorporations.

Lion Polish Co., Ltd., capitalized at $40,000, head office Toronto, to manufacture, sell, and deal in polishes, etc.

Dominion Incorporations.

J. A. Berthiaume, Ltd., capitalized at $50,000, head office Ottawa, to manufacture and deal in bedsteads, bed springs, hardware, iron fittings and household utensils.

Canada Ingot Iron Co., Ltd., capitalized at $20,000, head office Guelph, to manufacture and deal in culverts, tile, pipe, iron or steel sheets, engines, road rollers, etc.

The Dominion Road Machinery Co., Ltd., capitalized at $300,000, head office Goderich, to manufacture and deal in road machinery, automobiles, etc.

Standard Primer & Fuse Co., Ltd., capitalized at $150,000, head office Toronto, to manufacture and deal in time and percussion fuses, detonators, and primers, etc.

Mackenzie Bros., Ltd., capitalized at $100,000, head office Winnipeg to carry on the business of hardware and supply merchants, manufacturers, ironmongers, tinsmiths, plumbers, etc.

The Ontario Glove Mfg. Ltd., capitalized at $40,000, head office Berlin, to take over the business of the Ontario Glove Mfg. Co., Ltd., as a going concern and to manufacture and deal in all kinds of gloves, mitts, etc.

Personal.

L. Leclair has resigned from Lewis Bros., Ltd., traveling staff, and will in future represent Wood, Vallance & Co., of Hamilton.

H. T. Eager, Mgr. Toronto branch Wood-Vallance Co., Ltd., has resigned owing to ill health. H. D. Fleming who has been working Eastern Ontario for

the past five years takes charge of the Toronto office.

C. Landy, Mariopolis, was in town last week, and left orders with the trade for the equipment of his new premises. He is optimistic over the business situation since the recent rains.

G. Ramsden, Port Hope, Ont., who has represented Caverhill, Learmont & Co., on the road for over 35 years in Eastern Ontario, is enjoying a well earned rest at his home at Port Hope.

Winnipeg Personals.

Lionel Haney, manager for Burrows, Stewart & Milne, has left for the West on a business trip.

A. J. Mainwaring, hardware merchant, Bertle, Man., was in the city last week. He reports business conditions as satisfactory.

William Crawford, sales manager, Sheet Metals Products Co., has just returned from a business trip to Calgary. He reports prospects as generally improving.

H. W. Love, manager of the Irma Co-operative Co., Irma, Alberta, has just returned from a trip to the East, and called on the trade here. He reports Eastern trade slow, and looks for an improvement in the West following recent rains.

HARDWARE LETTER BOX

Pneumatic Tanks for Water Systems.

Illsley & Harvey Co., Ltd., Port Williams, N.S.—Will you kindly give us the names of some manufacturers of pneumatic tanks for water systems?

National Equipment Co., Ltd., Toronto, Ont.; General Machinery Co., Ltd., Toronto, Ont.; Gould Mfg. Co., Seneca Falls, N.Y.; F. E. Myers & Bro., Ashland, Ohio; Toronto Iron Works Co., Ltd., Toronto, Ont.; John Stevens Co., Winnipeg, Man.; J. H. Ashdown Hardware Co., Ltd., Winnipeg, Man.; Empire Manufacturing Co., Ltd., London, Ont.—Ed.

Grundy Bros. & Co.

Howe & Henderson, Ingersoll, Ont.—Could you please advise us if Grundy Bros. & Co., Strathroy, Ont., are still in business?

This firm is still in business at Strathroy, Ont.—Ed.

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

McMURTRY HARDWARE CO., GALT, ONT.

Galt, Ont., May 17, 1915.

Editor Hardware and Metal,
Toronto.

Regarding the statement made in your paper some few weeks ago that Mr. G. Ferguson, who was leaving Ingram & Davey's would in future manage the business of the McMurtry Hardware Co., would say: This statement was made by him solely on his own responsibility without any authority whatever from me, as I had no conversation or correspondence with him regarding this matter at any time, and knew nothing about it till I saw it in Hardware and Metal and the St. Thomas papers.

McMURTRY HARDWARE CO.,
Per W. J. McMurtry.

CATALOGUES AND BOOKLETS

Sign Lighting.

Canadian General Electric Co., Ltd., Toronto, are distributing an attractively gotten-up booklet, entitled "Sign Lighting with Edison Mazda Lamps."

Gravity Spiral Conveyors.

Otis Elevator Co. have issued an attractively gotten-up 60-page booklet featuring Otis Gravity Spiral Conveyors for lowering packaged merchandise and boxed, cased, bagged and barreled goods.

J. H. Williams & Co., Catalogue.

J. H. Williams & Co., Brooklyn, N.Y., with branch factory at Buffalo, N.Y., have issued a 160-page catalogue descriptive of their various lines of iron, steel, copper, bronze and aluminum drop-forgings.

Automobile Supplies.

The Canadian Fairbanks-Morse Co., Ltd., Montreal and Toronto, have issued catalogue No. 55A, giving a complete illustrated and descriptive list of practical Ford auto specialties. The catalogue is one that should be appreciated by all hardware merchants who are interested in handling auto accessories. Complete instructions for ordering and a parcel post rate table are given on the inside front cover. The catalogue consists of 14 pages, and carries an exceptionally large number of illustrations.

Ashdown's Booklet.

The Ashdown Hardware Co. has just issued a booklet on their water supply system that should be very useful to the trade.

The Frank Mossberg Co. Catalogue.

The Frank Mossberg Co., of Attleboro, Mass., have a very interesting catalogue, which they offer to send to any person who is interested in the line of wrenches and tools which they manufacture.

The Mossberg Co. started to make bicycle wrenches some eighteen years ago.

Following the trend of the times, they developed certain wrenches for the motorcycles and automobiles, and their present catalogue shows the result of their endeavor to provide very desirable items absolutely guaranteed, at as low a price as they can consistently market them.

Write for catalogue No. 173C to the Frank Mossberg Co., Attleboro, Mass., and they will be more than glad to send one to you.

The Peterborough Lock Mfg. Co. Catalogue.

The Peterborough Lock Mfg. Co., Ltd., Peterborough, Ont., have just issued an exceptionally attractive 433 page catalogue featuring their complete line of builders' hardware. The new catalogue supersedes all previous issues and will be used exclusively in the future. Every effort has been made to compile the catalogue so as to make it interesting and helpful to the hardware dealer and at the same time to make its contents easy to understand. In some cases, changes have been made in numbers previously used. Old numbers have been retained as far as possible but it has been deemed wise to revise the numbering system with the purpose of simplifying it as much as possible. In numbering sets, the set number is made up of the lock packed in same, preceded by the design number, the set taking a standard knob and escutcheon. On lines of design sundries, such as bell turns, letter box plates, push plates, pull plates, etc., the design number is prefixed, as in the case of the sets. All articles in the catalogue are listed in one finish only, and when ordering finished goods the dealer has simply to state the finish wanted. A great many attractive designs not shown in former catalogues appear in the latest issue. The illustrations are exceptionally good and the catalogue should be appreciated by the whole trade. The company has been supplying hardware products to the trade for 30 years —1885-1915 and the new catalogue No. 7 shows that the company has great faith in the future of Canada.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

Recent cool and wet weather has had a tendency to create dullness in the retail trade, and early summer lines have not moved as rapidly during the week as might have been expected. The advent of warmer weather will have a splendid effect on trade and create a good demand for the many spring and summer lines carried by retailers. Among the important price changes during the week are advances in the prices of galvanized iron pipe, galvanized sheets. In the metal markets there is a good demand for metals used in the manufacture of war materials, but domestic trade is quiet. Tin has declined in price, while lead and copper remain unchanged. Aluminum has advanced 2 cents per pound. Antimony has advanced further and has beaten all records for high prices. Spelter is high in price and very scarce. Many products, into the manufacture of which spelter enters, have been advanced in price as a result of the continued high price of spelter. Jobbers of metals are not particularly anxious to lay in stocks of spelter at the present high levels, although consuming buyers appear to be quite numerous. Reports from Western Canada state that there is a heavy demand for barb and woven wire fencing. This is considered a good sign. The flax market is weaker.

MONTREAL.

MONTREAL, May 20.—Country business continues satisfactory to the hardware trade. This applies to general lines. In the city little, if any, improvement is noted, and the demand for builders' hardware and building materials is very dull, with little prospect of improvement during the present season. The metal markets are somewhat quieter than they have been for some weeks, but the effect of the steady advance which was spread over several months is indicated in further increases for metal products. Galvanized sheets are up 25c all round; copper rivets have been advanced; galvanized and black wrought iron pipes are again increased; and brass chain and glaziers' points are also higher. Another change in the price on Dominion shells is noted.

The movement of seasonable lines continues very satisfactory, and the commencement of the June wedding-gift business is noted.

The Metals.—With the exception of spelter, the metal markets are quieter this week. Tin shows a substantial decline, but cannot be said to be weak locally. The higher cost of spelter is found to be affecting many lines of goods the manufacture of which it enters into.

Tin.—In sympathy with the easier situation prevailing in outside markets the local quotation for tin shows a decline this week to 50c, but there is little indication of weakness. New York is quiet, with importers showing little or no interest and a decided indifference to trade. The difficulties attending the importation and clearing of supplies is largely accountable for this, and importers with the large arrivals this month and to follow have their hands full. Consumers also show a lack of interest with comfortable stocks on hand. The New York price declined 1¾c for the week to 39c.

Copper.—The market here holds firm at last week's level of 21c. New York also indicates the same level as for several weeks. Business is reported as being almost at a standstill on new orders, but reports continue of large inquiries in the market; however, as these do not seem to result in business, the trade is inclined to be skeptical, and buyers are awaiting developments.

Spelter.—An additional advance of 1c in the price of spelter is noted this week. This comes with an upward movement of a little more than 1c in New York. Quotations locally are 18c to 19c, and New York is 14¾c to 15c. The market continues to display great strength, and higher prices for sheets are indicated, with advances in galvanized pipe also in effect. New York reports that sellers seem to be unable to satisfy the demand for prompt and June and unable or unwilling to sell July, August and September shipments in anything like the quantities that are called for. Consumers who have pursued a hand-to-mouth policy have been very badly hit during the past three months, and the late advances are due to a large extent to these interests being forced to cover their June requirements. Having paid the penalty, consumers are now buying farther into the future, with the result that deferred values are rising more rapidly than spot or immediate futures.

Solder.—Solder holds to the market of a week ago, which recorded a decline of about 1c. With the lower prices for tin there should be further cuts made in the near future. The consumption of solder is small.

Lead.—The lead market is steady and quiet, although there is a firm note noticeable. A few weeks ago second-hands were offering below the price of the Trust—$4.20 New York—but now producers are sold well ahead and the second-hand offerings are all cleaned up, leaving practically nothing available in the way of spot.

Antimony.—There has been nothing to relieve the acuteness of the antimony situation. The local quotation of 35c is purely nominal, and holders of Cookson's or Hallett's can get almost any price they may care to demand. New York reports a further advance in the prices on miscellaneous brands of about 2c, and a similar advance on Chinese

MONTREAL QUOTATIONS.

Tin	50c-51c
Spelter	18c-19c
Copper	21c
Lead, cwt.	5¾c-6c
Antimony	35c
Solder, ½ x ½	26 to 30
Solder "strictly"	28 to 32
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

and Japanese. There are no offerings on futures.

Sheets and Plates.—An advance of 25c all round on the price of galvanized sheets is one of the direct effects of the steadily advancing cost of spelter. The increase was decided upon at a meeting of the Montreal Association on Wednesday. Prices now are:—

Queen's Head and Gorbal's best best—16-20, $4.30 22-24, $4.50; 26, $4.75; 28, $5.

Fleur-de-lis—16-20, $4.05; 22-24, $4.15; 26, $4.50; 28, $4.70.

Apollo—14, $3.75; 16, $3.75; 18-20, $3.95; 26, $4.15; 28, $4.65; 10¾ ozs., $4.85.

Colborne Crown—16-20, $4.10; 22-24, $4.30; 26, $4.55; 28, $4.80.

Plates are very firm on the recent advance, which was also due to the higher cost of spelter.

Copper Rivets.—The advance in copper rivets, referred to in reports of the last two weeks, has gone into effect. The discount is now 27½ per cent., as compared with 32½ and 5 per cent. Some other advances in copper products are in course of adjustment.

Bar Iron and Steel.—Movement here is light, but the market continues very firm. An advance in the price of Swedish iron is in order, one house having made an increase of 35c a cwt. The basis for bar iron continues at $2.

Advance in Pipe.—During the week there have been two advances in the price of black and galvanized pipe announced; the latter is the greater, and is due to the higher cost of spelter. The schedule as adopted by the association on Wednesday is as follows:—

Standard wrought,

per 100 feet.	Black.	Galvanized.
¼ and ⅜ in. ..	$2.39	$3.54
½ in.	2.86	4.21
¾ in.	3.27	5.08
1 in.	4.83	7.52
1¼ in.	6.54	10.17

9"	113 85	162 15
10"x32 lbs. per ft.	105 60	150 40
10"x40 lbs. per ft.	135 96	193 64

1½ in.	7.82	12.16
2 in.	10.53	16.36
2½ in.	16.63	25.86
3 in.	21.75	33.82
3½ in.	26.14	40.67
4 in.	30.98	48.19

An increase in the prices of Lapweld will be made on about the same basis, but the adjustments have not been been effected.

Lead Pipe.—A fair demand for lead pipe continues, but the consumption is still poor compared with a normal building season. The lead market is steady, and the prices for lead pipe at 8c and for lead waste pipe at 9c is firm, and the quotations are strictly net.

Ammunition.—A change in the discounts on Dominion ammunition has been passed by the association. Crown, Sovereign, Regal and Imperial are now 30 and 2 per cent. off, as compared with 30 per cent.

Brass Chain.—An increase in the price of brass jack chain is noted, the discount now being 45 per cent., as compared with 50 per cent. off. This increase can be directly traced to the rising metal markets.

Glaziers' Points.—The effect of the rising cost of spelter can be realized from the fact that the mills are announcing an advance in the price of glaziers' points. The new price is 30c a pound, as compared with 28c.

Screws and Bolts.—The market for screws and bolts continues very firm, particularly for the former, which, as previously pointed out, are directly influenced by the higher prices which must be paid for copper.

Rope.—The movement of rope is generally light, although there is a fair demand for lines entering into the country demand. Buying is generally close, and no disposition is shown to carry stocks. Following are prices:—

Pure Manila rope	15½c
British Manila rope	13c
African hemp	13c
Sisal	11c

Nails.—The movement of nails is only fair. There are indications that the country consumption is comparatively good, but there was heavy buying prior to the last advance in price, and stocks must be fairly heavy in the hands of retailers.

Fencing and Netting.—There is a very satisfactory movement of poultry netting, but the deliveries of fencing have largely been made, and present business is confined to re-orders.

Cutlery.—Some interest in cutlery for the June wedding-gift trade is already noted. This spring demand is becoming more and more important for the hardware dealers.

Builders' Hardware and Materials.—The demand for builders' hardware and builders' materials continues very light, and prospects are for a quiet season. New lists for builders' hardware will be out this week. The advances are generally as advised to cover the higher duty and increased cost of some raw materials.

Utensils and Stoves.—Prices of utensils are very firm on the recent advances which affected copper and galvanized ware. Demand for gas ranges continues fair, but other branches of the stove business are dull.

Sheet Zinc.—Despite the high prices prevailing for sheet zinc, still further advances are to be looked for, there being practically none available in the market.

TORONTO

TORONTO, Ont., May 20th—The general situation in the hardware trade is much the same as last week. The volume of business is perhaps hardly equal to last year for the corresponding period but the outlook is satisfactory as regards crop conditions which are very favorable. This feature in itself will have a decided tendency to brighten up trade but at the same time there is some uncertainty as to when industrial conditions will improve sufficiently to restore a greater feeling of confidence in the trade. Stocks are low and a cautious spirit is noticeable, buying being conducted along conservative lines. The country trade continues satisfactory and is making up for the falling off in the volume of business in the larger cities where the industrial depression is affecting trade, in some cases seriously. Some seasonable goods such as refrigerators and ice cream freezers have been affected by the cold spell of weather but other lines are in good demand. Gas and oil stoves are moving fairly well and there is a steady demand

for shelf hardware. There is a little more activity in the building trade but it is still considerably below normal. The demand for builder's hardware and supplies shows some improvement but a comparatively quiet season is anticipated.

Prices are being maintained and for some lines are very firm. An advance in wrought iron and galvanized pipe is announced due to increased cost of raw materials, notably spelter. For the same season prices of all galvanized sheets have advanced. The rope trade is being affected by a shortage of raw materials. Prices, however, are unchanged.

The Metal.—The situation as regards the metal markets is generally the same as last week. The demand for metals for munitions continues heavy and is if anything increasing, but ordinary business is quiet. All the markets are strong with the exception of tin which is easier. The spelter situation is unchanged and a scarcity of spot metal is still being experienced.

Tin.—The market is dull and easy with light inquiry. Visible supplies are increasing and the demand for spot and early deliveries is limited. In the New York market the difficulties attending the importation of tin is causing an indisposition to trade. Tin is quoted locally at 43c per pound.

Copper.—There is no change in the copper situation and the New York market is quiet but firm. The visible supplies have increased in London and the market there is easier. The position of copper is a strong one as the war demand is likely to increase rather than otherwise. Under present conditions a reaction in prices any moment is improbable. Quotations are firm at 21c per pound.

Spelter.—The market has developed great strength and continues to go higher. The demand is increasing and spot metal is very scarce. Nearly all the smelters are sold well ahead and the gradually increasing demand is making consumers who require immediate supplies to pay very high prices for their requirements. Spelter has advanced 1c and quotations are nominal at 17c per pound.

Lead.—The market is quiet but firm with a stronger undertone. Dealers report a good inquiry but buyers are not inclined to pay more than the quotation fixed by the Trust. Quotations are unchanged at 5¾c per pound.

Antimony.—There is no change in the antimony situation and the market is quiet but strong. The heavy demand for antimony for munitions continues and some brands are very scarce. Prices have advanced 2c and are nominal at 40c per pound.

Aluminium.—The market has become very strong with a higher tendency. Quotations are firm but unchanged at 23½c per pound.

Scrap Metals.—The market for copper and brass scrap is strong and prices very firm the demand for steel and iron scrap is light and prices are unchanged. Prices are given in the current market quotations.

Bar Iron and Steel.—The situation in the steel trade is unchanged. The demand for steel for shell forgings is increasing but otherwise the trade is quiet. Quotations for bars are firm but unchanged at $2.05 base.

Pig Iron.—The market continues quiet and uninteresting. The outlook for the immediate future is anything but promising and present conditions are likely to exist for some time, that is until the industrial situation improves considerably.

Wire Nails.—Business continues fair and the situation unchanged. The market is firm at $2.35 base. Cut nails are quoted at $2.20 base

Wrought Iron Pipe.—An advance in wrought iron pipe is to be noted on account of the increased cost of raw materials and in the case of galvanized pipe, the high cost of spelter. The new list is given in a panel on preceding page.

WINNIPEG QUOTATIONS.

Canada Plates:	
Half Polished, 6-7 inch ..	$3.80
Full Polished, 6-7 inch ...	4.95
Solder	32c-33c lb.
Linseed Oil, raw	95c gal.
Linseed Oil, boiled .....98c gal.	
Turpentine, in bbls.	80c
Poultry Netting	40% off
Galvanized Iron, 28	
Apollo and Fleur de Lis..	$5.25
Queen's Head	5.60
Corrugated Sheets, 28-gauge galvanized	$3.45
Copper rivets, No. 7	38c
Rope, Pure Manila	16c
Sheet Zinc	16c
Iron Pipe:	
Galvanized, 1 inch.	$8.15
Black, 1 inch	$5.75
Lead Pipe:	
Coil, ...	$8.25 less $9.25
Lead Waste	$8.75 per cwt.
Barb Wire per Spool:	
Lyman 4 pt., Ft. William..	$2.25
Winnipeg	$2.60
Paris Green:	
1-lb. pkgs. (case lots).....	25½c
Borax, per lb.	9c

Window Glass:	Sgle.	Dble.
Up to 25 in. .	$6.25	$9.00

Sash balance (Caldwell)	37½% off
Solder Irons	40c base
Shaving Soap (sticks, cream, powder), per doz.	$2.65

Lead Pipe.—The market is very firm but the demand although light is improving. Lead pipe is quoted at 8c and waste pipe at 9c.

Galvanized Sheets.—Business is quiet in galvanized sheets and plates but the market is unsettled on account of the spelter situation. Prices have advanced 25c all round and are given in the current market quotation.

Wire.—There is a little of interest to note but prices are holding firm especially galvanized wire. Smooth steel wire is quoted at $2.30 base.

Kitchen Utensils.—The advanced prices of galvanized and copper ware reported last week are being well maintained. A steady volume of business is reported.

Rope.—The situation as regards raw materials seems to be getting worse and it is extremely difficult to say exactly to what extent the market will be affected. Supplies of Russian and Italian hemp are practically cut off. Manilla is obtainable but only at advanced prices. The situation in Mexico does not look too promising and is seriously affecting the sisal market. Indications point to higher prices for rope but whether anything will be done in this direction is not certain. Business continues good and prices firm. See current market quotations for prices.

LONDON.

LONDON, Ont., May 19.—Cool weather has temporarily stopped the sale of summer goods, and business this week is only fair. Merchants are optimistic, however, and look for much better business when weather conditions improve.

Iron Pipe Advances.—New prices are now in effect on black and galvanized iron pipe, and net prices are now as follows:—

	Black.	Galvanized.
¼ in.	$2.22	$3.36
⅜ in.	2.22	3.36
½ in.	2.72	4.00
¾ in.	3.11	4.83
1 in.	4.59	7.14
1¼ in.	6.21	9.66
1½ in.	7.43	11.55
2 in.	9.99	15.54
2½ in.	15.80	24.57
3 in.	20.66	32.13
3½ in.	24.84	38.64
4 in.	29.43	45.78

Garden Tools, etc.—Sales of garden and lawn tools so far have been very satisfactory, although the cool weather of the last few days has had a tendency to temporarily stop the demand. Harvest tools are quoted at 40-12½ per cent; net prices on snaths are: No.3, $7.35 dozen; No. 2, $7.70 dozen; No. 1, $8.40 dozen. Scythes run from $7.25 dozen to $8.25 dozen. Spades and shovels are

quoted: Firsts, 60 per cent.; seconds, 55-2½ per cent.; fourths, 45 per cent.

Oils, Paints, etc.—There has been an excellent demand here this spring for nearly all lines of paint, and with the return of brighter and warmer weather the present demand will be greatly improved. Linseed oil is quoted as follows:

Raw Linseed—			
1 to 2 barrels	.....	82c	per gallon.
3 to 5 „	.....	81c	„ „
6 to 9 „	.....	79c	„ „
Boiled—			
1 to 2 „	.....	85c	„ „
3 to 5 „	.....	84c	„ „
6 to 9 „	.....	83c	„ „

Turpentine remains unchanged at last week's quotations; single barrels, 73 cents per Imperial gallon; 2 to 4 barrels, 72c per Imperial gallon; 5-gallon lots, 80c per Imperial gallon.

Wire Nails, etc.—Wire nails are quoted at $2.35 base, and cut nails at $2.70 base. Poultry netting is in fair demand at 45 per cent. off list; painted screen wire is selling well in 100-ft. rolls at $1.55 per 100 sq. ft., and at $1.60 per 100 sq. ft. in 50-ft. rolls; plain galvanized No. 9 wire remains at $2.30 per 100 lbs.; while No. 9 coil spring is quoted at $2.35. Barb wire is selling at $2.55 per 100 lbs.

WINNIPEG.

WINNIPEG, May 17.—Country business is quite satisfactory; city business very quiet. This sums up the situation in hardware circles and business generally in Western Canada. The end of the week brought copious rains, a real downpour over the western half of Manitoba and the whole of Saskatchewan and Alberta. "Rain in the nick of time and where needed," said Sidney Z. Smith, president of the Grain Exchange, on Saturday. As a matter of fact, about two inches of rain was reported from nearly all western points—Brandon to Calgary, Edmonton to the Boundary. These rains will give all grains a magnificent start, and are cause of just confidence to the business world. It is early yet to talk bumper crops, but the outlook is certainly better than average.

Country hardwaremen have had exceptionally good business in barb wire and woven wire fencing, and wholesalers report an excellent demand yet. This follows as a logical sequence of increased acreage under crop and in the organization of new municipalities and new by-laws regarding stock at large.

Iron Pipe Advances.

A general advance in black iron piping of 3 per cent. and on galvanized piping of 8 per cent., though not yet announced, is forecast. The very sharp advance in galvanized piping is due to the scarcity and high price of spelter. All galvanized goods will be affected by this scarcity in the near future. Galvanized iron has advanced 25 cents per cwt. on 26, 28 and 10¾., and further advances are looked for.

Contracting Business Quiet.

Builders' hardware is very quiet in the city, the contracting business usually of great volume and importance at this time of the year is practically non-existent. From all appearances very little building will be done this year in the Canadian West, and railroad construction will be very limited.

Metals Strong.

Copper and brass goods are sure to go up in value, as are all galvanized iron products. Spelter is scarce and dear, and black iron is very firm. These facts, following a recent advance of 8 per cent. in practically all lines of silverware, show that metals are stiffening all the time, and all indications point to much higher prices.

Flax Declines.

The flax market, which has been steadily rising during the past month, had a sharp break on Friday and Saturday of last week. Argentine flax is being thrown on the market, and should the decline have any permanence, cheaper linseed oil may be expected. Much will depend on industrial conditions affecting the consumptive demand.

ON THE MERCANTILE FIRING LINE.

(Continued from page 32.)

ments made by various firms, which have seemed to indicate that even the painting of a store has an effect on the volume of purchases. The late president of the United Cigar Company, was a great believer in this. "Why," he once said, "Our red, black, white and gold colors make men smoke."

A more important consideration, however, is the store approach.

"Don't have a bad step," it was urged. "It will keep some people out. Worse, it will bring some in with a little load of irritation. They will hardly understand this themselves, but your sales will suffer. Then have the departments clearly defined. Don't have everything jumbled together. That repels sales.

Emphatically it was stated that customers get ideas which either help or hinder buying from the appearance, the mannerisms, the general attitude of the clerks serving them. How a clerk walks, talks and dresses all help or hinder the selling of goods. These things, therefore, should receive attention just as much as should counter or window display.

There should be nothing about a sales person's dress that sticks out, demanding attention. That can be taken as a general rule. Jewelry hurts more sales than you imagine.

The importance of the voice in salesmanship, especially in the growing work of telephone salesmanship, received a good deal of attention from Dr. Neystrom. "The voice with the smile wins," he said. Then he proceeded to give a few suggestions for keeping an ear that smiles at the other end of the wire. Talk right into the machine, one inch from the mouthpiece. Remember it is your voice alone which is carrying impressions. You cannot help out your meaning with facial expression or gesture. Remember the vowel sounds travel easily by phone, but the consonant sounds are hard to transmit. Speak distinctly always and be courteous and patient.

Doctors have said that one person in seven is possessed of a bad breath. This is too bad for many reasons. It is fatal to salesmanship. There is a story Dr. Neystrom continued of a clerk whose breath was very bad, but whose employer, for fear of causing pain, forbore mentioning the fact, until chagrinned one day at seeing a lady turn away almost in disgust. When advised of the state of affairs—told he must improve his breath or seek a new position—the clerk was greatly disturbed. That night he attempted to blame his wife.

"Why didn't you tell me," he asked.

"Why," she said, "I thought all men's breaths smelled like that."

These, concluded the speaker, are a few practical and at the same time scientific suggestions. I believe that if you apply these—make your clerks apply them—if you couple them up with the information you are getting from your trade papers ,and magazines, that you will get splendid results.

Remember salesmanship is simply telling what you know of your goods so that you will make the right impression; but everything about you, about your clerk, about your store does something to convey impressions—and those which are not for you are against you.

WEEKLY PAINT MARKET.

(Continued on page 48.)

lead is stated to be very fine, but, apart from this, there are no indications of a revision of prices. The current paint market quotations contains the present schedule.

Whiting.—There is no improvement in the situation, and a scarcity of whiting is reported. Prices are unchanged, but firm.

Glue.—Stocks are light, and English glue is very scarce owing to difficulty being experienced in obtaining supplies. A scarcity of raw materials is also affecting the situation and quotations are very firm .

Paint Department

Hardwaremen are Advertising

Many Merchants Featuring Paints in Their Newspaper Advertisements—Extracts From Some of the Ads.

MORE advertisements featuring ready mixed paints are appearing in Canadian newspapers this year than in any past year. This does not refer, altogether to the consumer advertising that is being done by paint manufacturers, but rather to the advertising which is being done by the retail hardwaremen themselves. Although trade in paint lines which are sold to manufacturers has been rather quiet there has been a good steady sale of paint for household use. Retailers state that the paint trade this year is exceedingly good and that sales so far have been highly satisfactory.

The recent cool weather has had a tendency to slacken trade in painting materials but with the advent of warm weather the paint business will forge ahead. Landlords have been practically forced to do a great deal of painting this year. Clean-up and paint-up campaigns have had a good effect and have created many sales for paint.

Many house owners who put off painting last year owing to hard time cries, found that their buildings were deteriorating owing to lack of paint and have, therefore, entered the market. Other reasons might be quoted to show why many paint sales—have been made this year.

Retailers have not been slow to realize that paint is a good line to push this season and are spending their money freely on printers' ink. Readers will not doubt be interested in some of the reading matter that has appeared in recent advertisements. Only the introductory remarks are quoted:

The Mill's Hardware Co., Hamilton:

"Have the best decorated home in your neighborhood.

"That's the way to improve your home and neighborhood. It is a great pleasure to know that your house is the best looking in the neighborhood. Besides this pleasure it is a satisfaction to know that your house is well protected from the destructive elements of weather—sun, frost and moisture. Talk over the Neighborhood Improvement Idea with your neighbors. Plan to make yours the neatest and most attractive neighborhood in this city. Paint and flowers will make the change. Why not be the first to set an example—begin this spring to beautify your home and property. Paint your house, plant flowers and make a nice lawn. Think over this idea and decide to use Blanks' Paint. You will find their paint more economical, and will give better satisfaction than any you ever used. Ask for color cards. Remember our location. Opposite the New Royal Connaught Hotel."

Latham's Hardware, Moose Jaw, Sask.:

"Are you ready for the clean-up, paint-up campaign?

"Nature says to you, 'clean-up!' the grass cries out to you, 'Get the rubbish off and give me sunlight and air; give me a chance to get out.' Your buildings cry. 'Give us paint and we will look as good as new. Give us paint and we will repay you not only in looks, but in sanitation and durability. You be first and others will follow. Cleanliness mixed with some paint will make Moose Jaw healthy.' Yes, for this clean-up week we will make paint so cheap you can not help but buy."

John Bailes & Sons, Oshawa, Ont.:

"An arithmetic contest open to all boys and girls under 15 years of age residing in Ontario County.

"Four Questions—Which is the cheaper? By how much per gallon? Which is more economical? Why?

"So-called cheap paint made of adulterated material at $1.75 per gallon with a covering capacity of 300 square feet to the gallon, two coats, or Blank's Paint.

"Made of the purest of ingredients at $2.50 per gallon, with a covering capacity of 425 square feet to the gallon, two coats.

"Prizes to successful contestants. Cut out the coupons below, fill in your answers together with your name and address, bring it to our store, and if you have the correct answers we will present you with a handsome penholder free of charge."

The Weyburn Hardware & Furniture Co., Weyburn, Sask:

"Paint-up and clean-up week. The city looks better and brighter since its clean-up day. Why not continue it the balance of the week on the house and lawn. The result will more than compensate one for the outlay."

J. H. Ashdown, Hardware, Winnipeg:

"Brighten up your home. Just a little paint or varnish makes such a difference to your home, either inside or outside. It makes it more beautiful and more pleasant to look at and live in. In order to get the best results from your painting, choose Blank's products, they are absolutely pure."

W. J. Heard, Fenelon Falls, Ont.:

"Now is the time for repainting your house, both for protection against the weather and for the sake of its appearance. Then there is nothing that will show better returns for the time and money spent at house-cleaning time than paint and varnish used inside the house. Tell us what you wish to paint or varnish and we will show you a finish that will do it—and do it right. Blank's finishes are a line of paints and varnishes which do exactly what they are intended to do—give a right treatment to each surface. It is impossible to obtain one paint or varnish that is suitable for a wide variety of uses, so it is very important to obtain a product that is exactly suitable for the purpose you have in mind. Come in and talk it over. We may be able to help you with suggestions."

Self-confidence is a quality it will pay any business man to develop. But don't get this quality confused with overconfidence which has wrecked many a business.

Weekly Paint Markets

MONTREAL

MONTREAL May 20.—Although wet cool weather has to some extent taken the edge from the paint demand from the country districts, manufacturers still report a satisfactory volume of "outside" trade. The industrial consumption shows little or no improvement but the city store trade has brightened considerably with the spring paint campaign. General demand indicates continued close buying and stocks which have not been sufficiently heavy to meet the consumption; in other words the retailers are evidently getting better business than they had counted on when they placed their spring orders. Price changes during the week have not been important. There was a brisk movement of lead last week-end to complete booking placed for delivery prior to the 15th of May.

The big spread which has existed for some time in the linseed oil market in Montreal has caused Hardware and Metal to make careful inquiries as to the reason for the difference in quotations, amounting to as much as 8c. The conclusion is that the high prices may have a bearing upon the present cost of production but they do not represent the market for the time being so far as the retailer is concerned.

Linseed Oil.—With quotations of 82c and 88c for raw oil, and a proportionately large spread for boiled, it does not stand to reason that the figures can represent the real market to the trade. The market has existed in this state for some time and the conditions are worthy of careful analysis. Since the outbreak of the war there have been wide fluctuations in the flax market, which have had a direct bearing on the cost of production—and conditions have been very unsettled; with rising costs of production there has been a declining consumption. This has resulted in stocks of oil in the hands of some dealers and certain of the crushers, the cost of which does not compare with the present flax values. The result is that for the everage needs of the trade the low prices are prevailing in many quarters, dealers who are "short" quote the high figure. It is understood that the producing cost of boiled oil is 80c and that if allowance is made for the usual 10c% figured on small lots to the trade, the price would be 88c to 90c. But what the dealers should get and what they are getting are entirely different. Competition between paint houses and jobbers is so keen that oil in the hardware trade is becoming to be regarded much as sugar in the grocery trade, a staple to be handled at close profits to bring trade. Again there is still 50c oil in the market and the prevailing price of 85c represents a very satisfactory margin. The outlook, therefore, is for a steadily advancing market from the bottom quotations, as stocks become exhausted and the higher costs of raw material have a direct bearing upon the situation. Quotations have been arranged to indicate the market for existing stocks and the relationship of the high level warranted by present cost of production.

	Low	High	Low	High
	Raw		Boiled	
1 to 2 barrels	82-83	88	85-86	91
3 to 5 barrels	81-82	87	84-85	90
6 to 9 barrels	80-81	86	83-84	89
10 barrels and over	79-80	85	82-83	88

Gasoline.—Market is unchanged with prices prevailing as for some weeks. The movement continues in very fair volume. Drums are quoted at 15c gallan and tank wagon 14½c.

Turpentine.—In the turpentine market the conditions are somewhat the same as regards linseed oil. Refiners are quoting 68c, and to the trade the usual quotations are from this figure to 70c. At the same time one house reports a figure of 66c and a rather strang feature is that this same company gives the highest of the local quotations for oil.

	Per gal.
½-bbl. lots	71-73c
1-bbl. lots	68-70c
2 to 4-bbl. lots	67-69c
5 to 10-bbl. lots	66-68c

Lead and zinc.—The end of last week saw an active movement of lead. May 15th was the date when many booking contracts expired, and, in view of the fact that these, in many cases, were at lower prices than the prevailing market, the trade showed a disposition to take full advantage. The market continues steady and firm. Quotations are $8.95, with 30c advance for less than ton lots; zinc is around 14c in 25's.

Glass Situation.—The glass situation continues unsettled but the former price basis is nominally in force.

TORONTO.

TORONTO, Ont., May 20.—Conditions are more encouraging in the paint trade, and some nice business is being done with the country trade. Business in the city is not very brisk, although the fine weather has helped sales along. Cautious buying is the general rule, and lighter stocks are being carried than is usual. Prices are holding firm, but no changes have to be recorded this week except in turpentine, which has declined 5c a gallon. Linseed oil is firm at last week's quotations. The position of white lead is a strong one, and prices are holding very firm. The dry color situation is unchanged and irregular, prices having an upward tendency for some colors. The glass situation is unchanged and the market unsettled. Collections are not improving much.

Linseed Oil.—Quotations continue to be irregular and range from 82c to 89c. The market is firm, with slightly improved demand. Flax-seed is still around $1.86, and crushers are maintaining prices. There are, however, supplies of cheap oil still on hand, which is tending to depress the market, as oil is cheap at the present cost of seed. The following prices are generally being quoted in Toronto:

	Raw.	Boiled
Single barrels	82	85
3 to 5 barrels	81	84
6 to 9 barrels	80	83

Turpentine.—The market is unsettled and weaker, prices having dropped 5c a gallon. It is reported that producers have been holding some turpentine, and it is also claimed that production this year is one-third less than last. An attempt to stimulate business may also have something to do with the decline in the market. The resin situation is unchanged and prices are firm. The following prices are quoted in Toronto for turpentine:—Single barrels, 68c; 2-4 barrels, 67c; and 5-gallon lots, 75c per Imperial gallon.

White Lead.—The margin of profit on white lead at the present price of pig

More than 5000 active formulas are used

in producing *Sherwin-Williams* Paints, Varnishes, Enamels, Stains, etc.

For more than half a century this organization has been perfecting formulas and working out from practical tests the right finish for every purpose.

On this long experience, combined with the theoretical knowledge of our experts and the skill of our paint and varnish makers, the quality and value of all S-W products is based.

Not only are our formulas correct, but every raw material used in S-W paints and varnishes measures up to an equally high standard of purity and quality. Through these efforts to give the consumer the utmost satisfaction, The Sherwin-Williams Co. has grown to be the largest manufacturer of paints and varnishes in the British Empire. The dealer who sells S-W products not only has this great prestige behind him, which is a valuable asset to his business, but he is able to give his customers every satisfaction, and he is rewarded by a steady increase in sales and repeat orders.

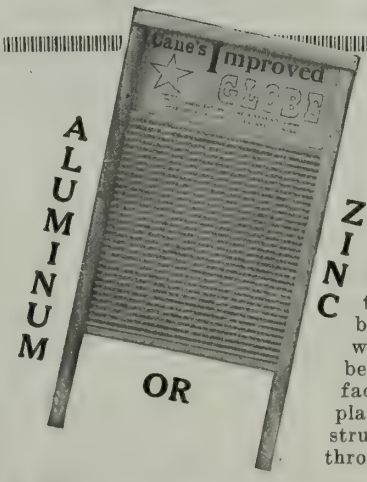
SHERWIN-WILLIAMS PAINTS & VARNISHES

A FINISH FOR EVERY PURPOSE

THE SHERWIN-WILLIAMS Co. of Canada, Limited: Montreal, Toronto, Winnipeg, Calgary, Vancouver, Halifax, N.S., London, Eng.

Stock Watering Tanks

Here is something new for the Western Canadian Trade. Made from 20-gauge Galvanized Steel. Stamped sides and exclusive roll rim. No projecting edges for bridles or halters to catch on.



The strongest and most durable tank offered.

Write for literature and prices.

Winnipeg Ceiling and Roofing Co., Limited

P. O. Box 3006 H. **Winnipeg, Man.**

Cane Quality and Appearance BETTER STILL

The price of zinc having advanced so materially on account of war, it has now reached a point where aluminum in its pure form can be used in the place of sheet zinc, and we are prepared to deliver our standard brands of washboards, which have formerly been delivered with zinc face only, with aluminum plate, on receipt of instructions from customers, through the jobbing trade.

The Advantage in Using Aluminum

is that it is **less liable to crack, split or carry defects** that will tear the clothing being washed on it, and that it has much **brighter appearance than zinc** and is **more attractive and more easily** sold on that account.

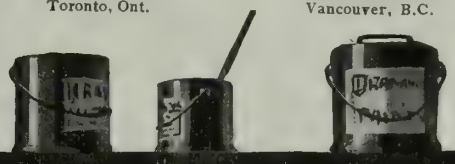
RAMSAY'S

"MAKING GOOD"

The only way for paint to "make good" under the test of Canadian climate is to make the paint so good that it is worthy to bear the name RAMSAY.

Since 1842 we have manufactured the best paint we knew how to make—and since the first can was used "Ramsay's Paints" have been making good"—for us, for the dealer and for the man who finally uses them on the job.



Write us for prices on whatever you need. Ours is "The Complete Line."

"The Right Paint to Paint Right."

A. Ramsay Son & Co., Montreal

48 Colborne Street, Toronto, Ont.

167 Pender Street, Vancouver, B.C.

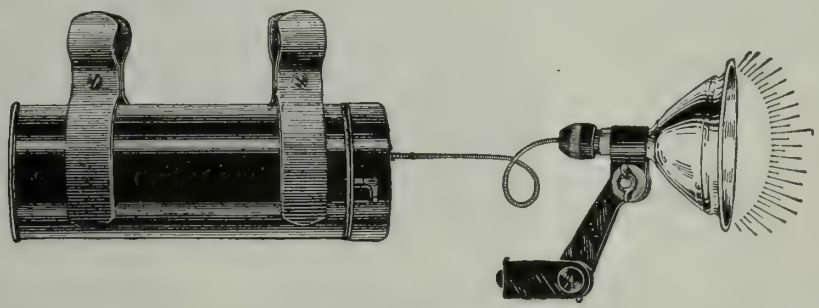
TRADE MARK



Electric Lighting Outfit for

BICYCLE, MOTORCYCLE, CARRIAGE, CANOE, ETC.

Join the ranks of the "Francoites" and handle an "up to the minute line."

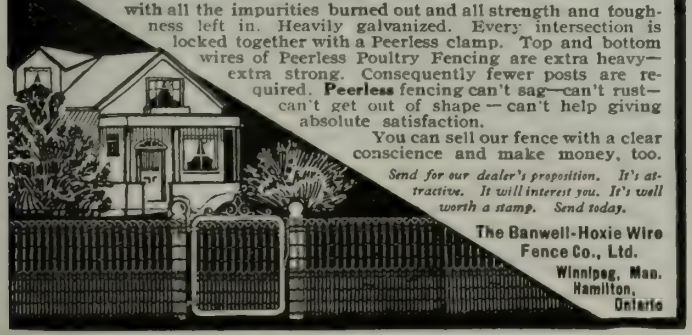
INTERSTATE ELECTRIC NOVELTY CO. OF CANADA, LIMITED

220 King Street West TORONTO, ONT.

4819

To meet the demand for a popular-priced headlight for bicycle, motorcycle, carriage, canoe, etc., we have placed on the market the outfit shown.

Constructed of brass throughout, highly nickel plated and polished, with bracket for attaching and container for necessary batteries.



PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape — can't help giving absolute satisfaction.

You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

ONCE there dwelt in a distant land a man of wisdom so rare and judicious that the high and the lowly, the princes and the merchants alike journeyed to seek his counsel. And so it came to pass that one day a certain merchant undertook this long and arduous pilgrimage, for there were many to feed and shelter in his household, and his business was not progressing.

He arrived at the home of the dispenser of Knowledge, and when his turn came to be shown into his presence he fell upon his knees and asked:—"What must I do to become a successful merchant and lift me and mine out of the insignificance into which we have fallen?"

The oracle bowed his head in thought, then his brow cleared and he made answer: "Regard business as more than the barter of merchandise. Keep your eyes fixed always upon an Ideal, and let it be this that I shall give you. Return to your home and study how best to serve your customers, how most carefully to guard their interests. Conduct your bazaar in such a manner that you give the best that is in you at all times, and verily your days shall be long and prosperous, for no greater asset can a merchant have than the reputation for conscientiously ministering to his customers' needs."

The pilgrim thanked the Wise One and turned his face towards home, but with a heavy heart; for the advice seemed calculated to impoverish the merchant in order that the customer might pile up his store of shekels. But, as he trudged along on his long and toilsome way, the thought began to take form, and the romance of having an Ideal made strong appeal to his Eastern soul, and as he thought and evolved new ways whereby he might help his customers to help themselves, the distance lessened magically, and his feet moved more lightly, and soon he found himself within the walls of his little shop now glorified by his Ideal.

Time passed, and always he found new ways to serve his customers, and his bazaar grew famous, and people came from lands afar to buy his Merchandise; for always he sold them Merchandise-plus-Service.

Humanity is the same whether it wears the flowing robe of the East or the practical garb of the workaday bustling Western world. What applies in the bazaars of the Orient is equally true of the warehouses, factories and shops of to-day. For 30 years we have kept before us always an Ideal and never swerved from the path that led directly to it, and it has been our policy of "Merchandise-plus-Service" that has made friends and successful Merchants of our customers throughout Western Canada.

MILLER-MORSE HARDWARE CO. LIMITED

"THE BIG WINNIPEG HOUSE"

A Straight Talk from the Manager

Train Your Clerks to Read the Advertisements

ONE day last week the Editor of Hardware and Metal visited a hardware store in Western Ontario, and watched a clerk lose six sales in the course of half an hour.

¶ That clerk was not efficient, and indeed, there are few salesmen in any line whose efficiency cannot be increased, under proper direction.

¶ Your store will make more money for you if you can get your clerks into the habit of reading Hardware and Metal's advertisements every week. They will pick up many hints on how to sell the goods you have in stock, or to book orders for goods that you can secure by express or fast freight, with the minimum of delay.

¶ The clerk who studies Hardware and Metal, will rapidly acquire an education in hardware which will make him a valuable man to you, and it is no disparagement of the Editorial pages, to say that the advertisements will give him his most profitable lessons.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

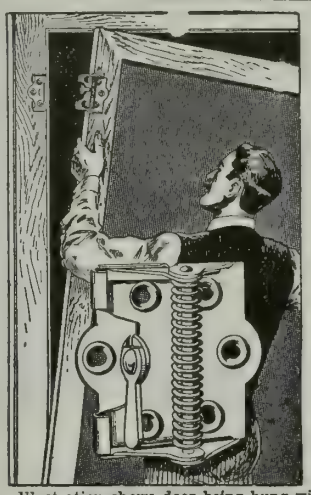
MISCELLANEOUS

FIRE INSURANCE. INSURE IN THE HARTford. Agencies everywhere in Canada.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR contract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

DOUBLE YOUR FLOOR SPACE—BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.



HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

A SEED DEPARTMENT
will add to your profits.

Kelway Langport England

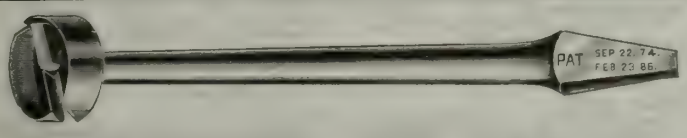
grow and sell **SEEDS OF ALL KINDS** for Traders. Write to the **actual WHOLESALE growers** for rock-bottom prices and illustrated catalogue. Buy well ahead to secure **LOWEST PRICES.** Write **TO-DAY.**

JIFFY Detachable Screen Door Hinge

Patented

Illustration shows door being hung without tools. Pull the lever and it's done. No more trouble with screws—the parts have only to be screwed on once. Nothing to equal it for WINTER STORM DOORS, as well as SCREEN DOORS. Made in all finishes, twelve pairs packed in a box. Also individual sets, which includes one pair hinges, screws, handle, hook, one set to a carton.

Be sure and have your jobber show you this hinge before buying others, or WRITE FOR SAMPLE TO



SAUNDERS & WAINWRIGHT
St. Nicholas Bldg. Montreal

When answering an ad. on this page tell the advertiser where you saw it.

DON'T BE A PASSIVE RESISTER

in refusing to advertise merely because you **think** you can't get results. Face the facts and ask yourself if an announcement going to thousands of Hardwaremen, all of whom are interested in your goods, is not going to have a selling advantage over and far greater than if your name was never seen.

RATE CARD AND FULL INFORMATION ON REQUEST.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps
They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

Convenience Quickness and Economy
that fills a long-felt want

THE "CANNON OILER"

FORCES THE OIL ANYWHERE by simply pressing on the plunger. The oil is entirely controlled by the operator in whatever position the can may be held.

SAVES THE OIL. As the flow of oil ceases the instant the pressure on the plunger stops, not a drop of oil need be wasted.

TRY IT. THE SALES WILL SURPRISE YOU.

EUREKA GLASS TANK SPRAYER

STRONGLY MADE. WELL PAINTED. ATTRACTIVELY FINISHED. For Spraying Potatoes, Tobacco, Small Shrubs, and all disinfectants in poultry houses and on live stock, this will be found an excellent sprayer.

The pump cylinder is supplied with an air chamber, which prevents any of the solution being drawn back into the valves, and also greatly increases the pressure when spraying. Discharge tubes are brass—no corrosion. Pump rod is hard steel. Plunger leather is of special type, and is made from heavy calf leather. Equipped with regular crown jar and ordinary rubber ring.

FULLY GUARANTEED. PRICES ATTRACTIVE.

DRAW PROFITABLE BUSINESS

Every tire user has *trouble*. And so far as we can see, he always will have! But this trouble can be lessened. It can be cut down to one-tenth of what it is now. 90% eliminated. This: by using the "ADAMSON" Vulcanizer. Every tire user sees the logic in our principle — and BUYS SOMETIME, for it's economy to carry an outfit in every car. Are you going to gather in some of these dollars which the ADAMSON is attracting? They will come to your place of business — if you've "ADAMSON" outfits on your counter.

1835— —1915

The Name of

CHATILLON

has been a guarantee of quality to the trade and consumer ever since 1835. The complete line of **Scales** we manufacture gives universal satisfaction to the user and allows a liberal margin of profit to the dealer.

Twenty-five years ago we became interested in Foster Bros.' brand of **Butcher Knives** and cutlery. To-day this line enjoys a world-wide sale. You will find that it is just as easy and profitable to handle this cutlery as it is to sell our Scales.

Our products are the results of years of experience. Only the best materials for their particular purposes are used throughout. Our own skilled workmen are experienced in the manufacture of our products, and we continually strive to maintain a high standard of quality.

AN ADVERTISEMENT FOR MANUFACTURERS
OF HARDWARE AND ALLIED LINES.

Here Is Real "Staying Power"

Subscription discontinues have always been very light on Hardware and Metal, but our subscribers this year are showing unusual "staying power." For the first four months, discontinues are 15% less than for the same period last year. This is a remarkable showing, in view of the wide-spread policy of "cutting down expenses." It proves that Canadian hardwaremen regard their trade paper as an investment rather than an expense.

In another respect, too, our subscribers are showing fine "staying power" —and that is in holding their entrenchments securely against the assaults of business depression. The casualty lists published in Dun's and Bradstreet's contain many names of hardware merchants, but it is found on investigation that few of Hardware and Metal's subscribers are falling by the wayside.

Considering the thoroughness with which Hardware and Metal covers the Canadian hardware trade, this also is a remarkable showing. It is evident that hardware merchants who read Hardware and Metal are trained to be better business men—the kind who may be depended upon to meet their obligations promptly.

If you were to ask a dozen successful Canadian hardwaremen, at random, to name their favorite trade paper, it is more than likely that they would ALL say "Hardware and Metal." The older ones would probably tell you that they had been subscribing to Hardware and Metal continuously for more than a quarter of a century.

They are the kind of men with whom you, as a manufacturer of hardware, are anxious to do business. Don't you want to introduce yourself to them through Hardware and Metal's advertising pages? Let us help you to work out a campaign that will strengthen your sales organization just where it needs to be strong.

HARDWARE AND METAL

CANADA'S ONLY HARDWARE WEEKLY

(ONE OF THE MACLEAN TRADE NEWSPAPERS)

Toronto, Montreal, Winnipeg, Boston, New York, Chicago, London, Eng.

HARDWARE AND METAL

Vol. XXVII. PUBLISHED EVERY SATURDAY SINCE 1888 May 29
No. 22 THE MACLEAN PUBLISHING COMPANY, LIMITED 1915
PUBLICATION OFFICE: TORONTO, CANADA

Can Your Plant Make More Money For You?

Yes, if you can sell more goods at a smaller ratio of expense. And this can be done in two ways:

1. By inducing more hardware merchants to push your line.
2. By inducing your present dealers to speed up in selling your goods.

Both these results can be accomplished at a minimum of expense, by forceful advertising in Hardware and Metal. A strong advertisement every week will gradually break down the opposition of many powerful merchants who have hitherto withstood your best efforts. It will give to your present dealers a stronger belief in your goods and a greater enthusiasm in recommending them to their public.

May we help you to build up a sales-winning campaign? Our staff of experienced business men and advertisement writers is at your service.

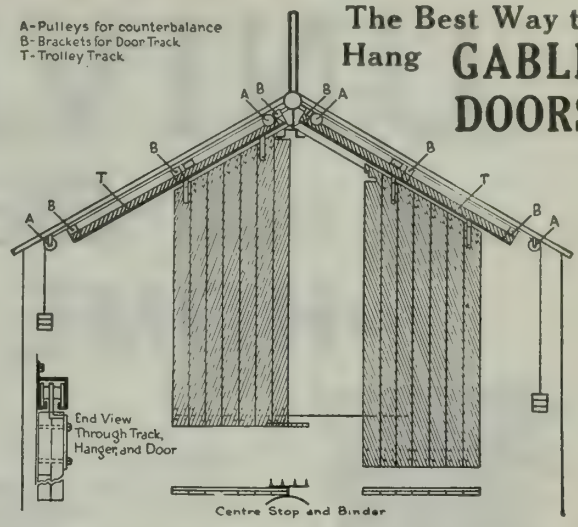
Tell Your Customers

to beautify their homes by fencing the lawn and garden with Peerless Ornamental Fence.

YOUR success in the sale of fencing does not depend so much on your sales ability as on the fencing you sell. It's fence service—not price—that brings you customers. Ours is a fence of service—a fence of repeat orders. We have letters from dealers all over the Dominion substantiating these statements.

PEERLESS



Ornamental Fencing

is made of strong, stiff, galvanized wire that will not sag In addition to galvanizing, every strand is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless Ornamental Fence is made in several styles. It's easy to erect, and holds its shape for years.

Send for free catalog. If interested, ask about our farm and poultry fencing. Agents nearly everywhere. Agents wanted in open territory.

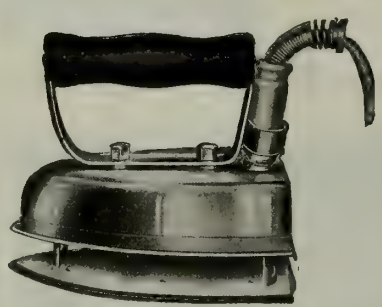
UNIVERSAL
Electric
HOME NEEDS

UNIVERSAL
Electric Toaster No. E944



Base your Spring and Summer selling campaign on a line of electrical appliances which bear the guarantee of a firm that has been in business for over seventy-five years.

Your customers are all familiar with UNIVERSAL Home Needs and they know that every article bearing the UNIVERSAL trade-mark will satisfactorily perform every service claimed for it.

The appliances shown here are especially suitable for warm weather business—they sell quickly and stay sold, allowing you a good margin of profit on the sale.

UNIVERSAL
Electric Coffee Percolator
No. E9637

UNIVERSAL
Electric Iron No. E903

UNIVERSAL

When you sell UNIVERSAL Electrical Appliances you have several talking points that you won't find in any other line—points that will in nine cases out of ten clinch a sale with an undecided customer.

These points include the UNIVERSAL Fusible Plug Safety Device (in all UNIVERSAL Electric Home Needs designed to heat a liquid), which absolutely prevents all danger of the heating element burning out or setting fire to the table. This is an exclusive feature, found only in electrical appliances made by us.

UNIVERSAL
Electric Tourist's Iron
No. E9021

UNIVERSAL
Electric Round Radiant Grill No. E984

Another advantage in carrying UNIVERSAL Electric Home Needs is the promptness with which your orders are filled, making it possible for you to carry a small stock which you can turn over many times in the course of the year with an added profit on each turnover.

For prices, etc., write to your Jobber or direct to us.

"You'll use a Disston Saw, too, someday"

Saws and Tools That Last For Generations

It takes a mighty good saw to serve two or three generations of mechanics, yet there are numerous cases where a Disston Saw has passed from father to son more than once in its lifetime. This quality of great durability is only one of the many that attest the wonderful superiority of Disston Saws.

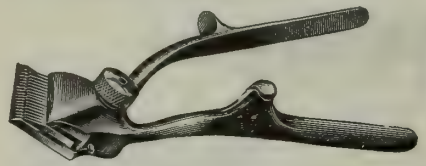
The reputation which has been built up in the past 73 years for these saws is shared by other Disston products, for

Disston

SAWS TOOLS FILES

all embrace those distinguishing qualities of durability, efficiency and ease in handling which have enabled them to set a standard for high-grade tools that is world-wide in its scope.

We carry a complete line of these famous saws, tools, and files.

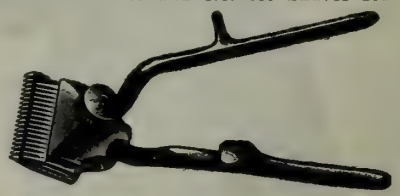


Lewis Bros., Ltd.

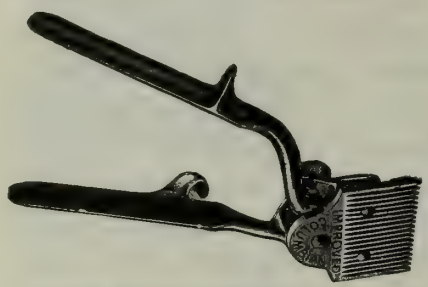
MONTREAL

PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

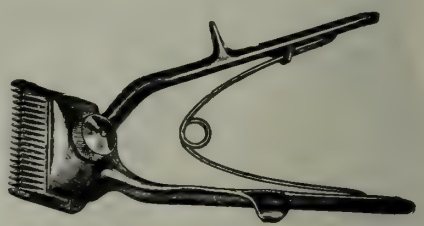


present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1, and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

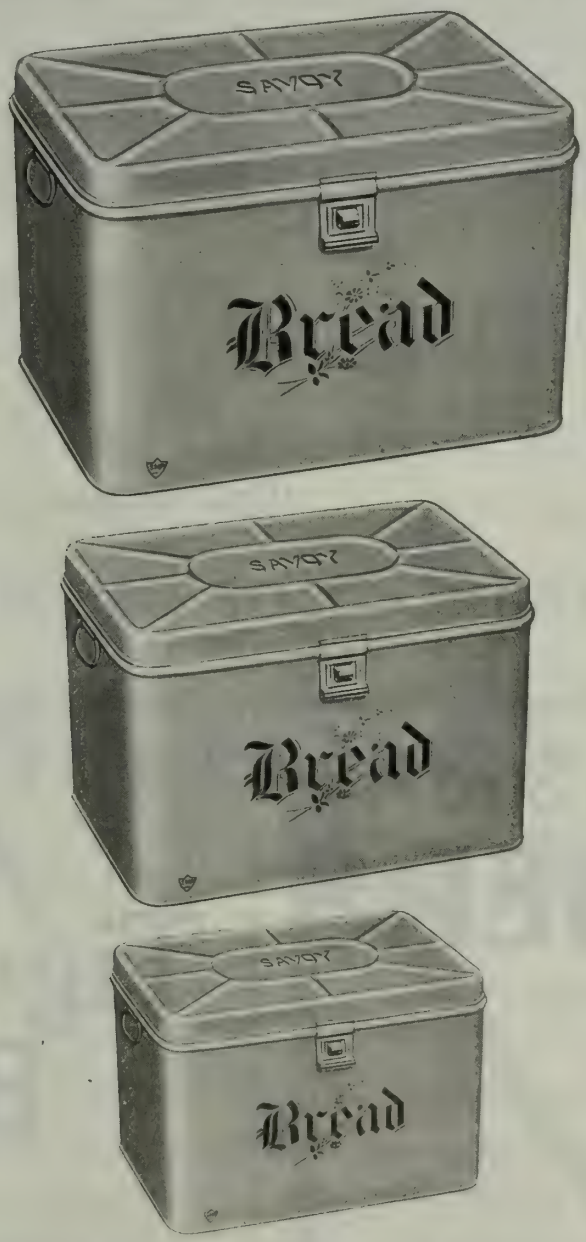
CADET
with visible spring, retailing at about $1.00.

New Machines with an Old Trade-Mark

Both are Cummer-Dowswell's

The "MAGNET" is one of the easiest running and most convenient to operate hand washers of the many we have produced. It can be operated sitting or standing. The mechanism is attached to side of tub (instead of cover), and can be belted to either gas, gasoline, steam engine, windmill or electric motor power without any change to gearing. Cover can be lifted without removing belt or stopping power.



The "NEW CENTURY JUNIOR" is a swinging tub hand washer built on the well-known and time-tested NEW CENTURY principle, but without a rod up through centre, leaving nothing inside the tub but two rubbing boards.

Both have the same perfection in construction, materials, easy running and lasting qualities that have made our products known and used from Halifax to Vancouver.

Always use C-D Wringers with C-D Washers.
The Combination gives Unequalled Results.

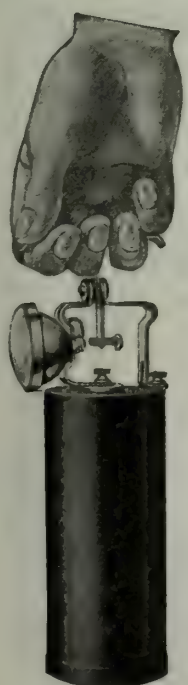
30 - year-old proofs, not mere claims, back the merits of the Galvanized

"EASTLAKE" SHINGLES



People ask us "How long will 'Eastlake' Shingles last?" We say frankly we haven't been making them long enough to find out. "Eastlake" roofs made and laid 30 years ago are in splendid condition to-day and look good for another 30 years at least. The day of the wood shingle is past. The fire menace and all-round expense is too great. The day of the "Eastlake" Steel Shingle is here.

Let us send you the facts you need to get after the metal roofing business and make money. Write to-day to

Time to Order

FREEZERS

Whether you stock the LIGHTNING, GEM or BLIZZARD, you get a Freezer that has made good for more than a quarter of a century—one that has won its way into the hearts of the housekeepers by service that satisfies—backed by quality that creates confidence in both merchant and manufacturer—one that's well advertised and in demand—one that brings trade and helps you keep it.

The BLIZZARD, being a low-priced Freezer, makes a good running mate with either the GEM or LIGHTNING. Now is the time to place your order. Shipment can be made any time you specify.

BE SURE to INCLUDE the LIGHTNING ICE CHIPPER No. 1. You can sell one with every Freezer. It chips a block of ice into small uniform pieces in a jiffy, just right to pack closely around the can and shorten the time of freezing. So much easier to make Ice Cream. They help the sale of Freezers.

Your Jobber will Supply You.

NORTH BROS. MFG. CO.

PHILADELPHIA, PA.

Hardware Dealers—An exact duplicate of the ad. below appears in the May 27th and June 3rd issues of "Canadian Machinery." Tear off here and paste on your window with a display of Starrett Tools.

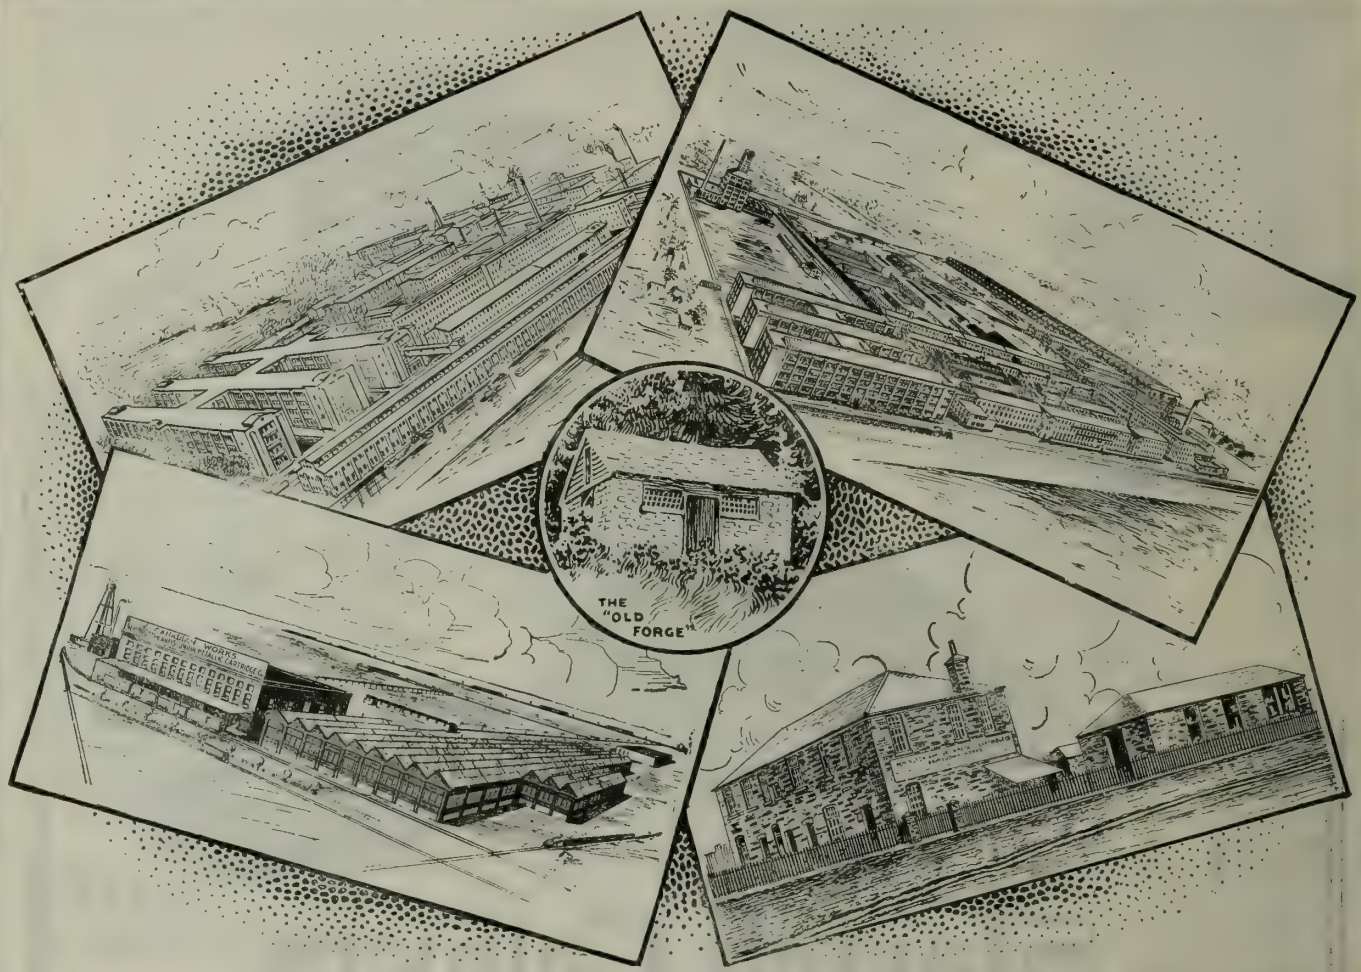
Starrett Calipers

Kinds

Starrett Calipers are made in a number of styles and sizes to suit every practical need of machinists and toolmakers. There are round leg toolmaker's spring calipers, Fay patent calipers, with split nut for quick action, Yankee spring calipers similar to the Fay but not quite as heavy. There are firm joint calipers, screw-adjusting firm joint calipers, lock joint transfer calipers for transferring measurements over ribs, flanges, bosses and in chambered cavities and several other special styles. These are all made of the best steel perfectly tempered to give longest service.

Hermaphrodite Caliper

The Hermaphrodite calipers shown here have sensitive adjustment and are made in the following sizes:



4″—$0.90, 6″—$1.00, 8″—$1.25, 10″—$1.50

No mechanic should purchase calipers or any other tools without consulting the Starrett 320-page catalog No. 20M.A. (sent free on request) for styles, sizes, and prices.

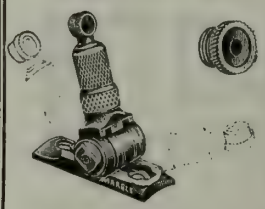
TRADE MARBLE'S MARK

VICKERS-MAXIM SIGHT

The new front sight that the whole shooting fraternity is now interested in.

The great advantage of the aperture over bead for front sight is that the object aimed at is never covered up by the front sight and the shooter does not have to guess how far he must "hold over" to hit the object. He sees the object or the exact spot aimed at and he aims directly at the point of impact instead of aiming lower, as is necessary with a bead sight of any kind. The act of aiming is involuntary and invariably accurate.

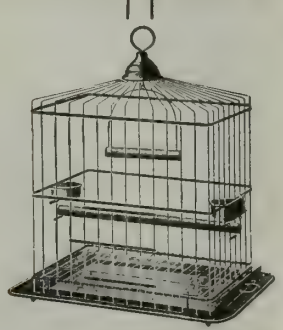
Two views showing actual size of Marble's Vickers-Maxim Sight.



Marble V-M or aperture front sights are 5-32" inside diameter, ¼" outside diameter with depth of aperture a scant ⅛". These dimensions are correct for practically all riflemen.

Made from best tool steel. Face and lining of aperture are made of our famous Pope's Island Gold, which is visible in dimmest light.

Sights are now ready for all rifles with 3-8" slots in barrel, Winchester '94 and '95 Model Carbines, Savage Featherweights, .280 and .303 Ross, and New Springfield Rifles.



Sure to be a big seller. Shooters everywhere have been anxiously waiting for this sight. Get a stock on hand now. **Be prepared to supply the demand. List price, $1.50.**

TRADE MARBLE'S MARK FLEXIBLE REAR SIGHT

The sight that won't break when struck. Does not lock up, but is held by a double-acting spring. Sight yields when struck and automatically flies back to correct place. Cannot be injured by blows or shocks, and is always ready for accurate shooting. Furnished with two discs having different apertures. Made for all American rifles. List, $3.00. **Ask Your Jobber or Write Us.**

Marble Arms & Mfg. Co., 5350 Delta Ave., Gladstone, Mich., U.S.A.

"HENDRYX" Parrot Cages

The cage that satisfies both the consumer and dealer at once. The former demands quality, the latter — profits.

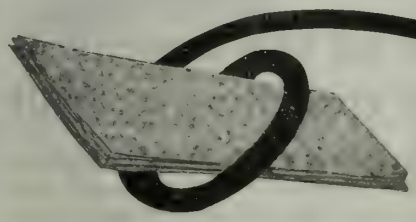
Trimo Superior Monkey Wrenches

THE ALL STEEL AUTO MONKEY WRENCH

Made narrow, in 12-inch size only.

Unlike most monkey wrenches, the Trimo is so constructed that the leverage increases in proportion to the increased size of the nut to which it is applied, as the movable jaw extends forward instead of towards the handle to adjust.

Another very important feature of the Trimo Monkey Wrench is that the threads of both the jaw and the nut are rounded, rendering them practically indestructible.



The Nut Guard is a new feature that prevents accidental rotation of the adjusting nut.

93-97 Adelaide Street West, Toronto

You can swing many sales on the Improved Features of this Breast Drill

For your customer, after a critical inspection' will realize that what he really needs—for ordinary jobs or jobs in cramped corners—is a

MILLERS FALLS BREAST DRILL No.200

Has every feature that makes for maximum ease, utility and efficiency. Crank handle is adjustable to a position in line with crank, so drill may be used in cramped quarters or when increased power is needed. The breast plate, designed for comfort, particularly on heavy work, is removable, and the drill can then be used as a hand drill.

On the crank handle is a simple and effective ratchet which is of great convenience on delicate jobs. Speed shift, positive, changes from even to 3 to 1 instantaneously. Chuck of famous "Sta." three-jaw pattern—has springs protected from injury and holds round shanks from 0 to ½ inch in diameter. Gears are machine-cut; small gears of steel.

This Breast Drill will help you attract and hold the most desirable tool trade in your neighborhood. You should also carry in stock Millers Falls Hand Drill 1980, Hack Saw 1027, Extension Bit Holder 6 and Glass Cutters—all backed with the Millers Falls reputation for reliability and durability, and sure to meet with ready sales.

WHOLESALE HARDWARE SPECIALTIES

STANLEY Wrought Steel Beveled Half Surface Door Butts

Cut of No. 165 3½ inch

THESE butts are reversible and can be made either right or left hand by simply unscrewing the ball tip, reversing the pin and screwing the tip in the opposite end. One tip is slotted so that it is easily removed.

The screws are wrapped *separately* from the butts, and both are packed in strong anti-tarnish paper to protect the finish of the butts. — *Are the screws packed with the butts on your shelves wrapped separately or are they loose in the package?*

Oval head screws are packed for the surface leaf, flat head for the jamb leaf. The advantage of oval head screws over round head is apparent; the extra purchase obtained in the countersink holds the butt rigid. Round head screws do not fill the holes, are less attractive and will *not* hold butts firmly.—*Are the beveled half surface butts on your shelves packed with oval head screws or round head?*

Compare a Stanley Beveled Half Surface Butt and package with other makes.

Our Exhibit at the Panama-Pacific Exposition is located in Block 26, Manufacturers' Building, Corner 5th Street and Avenue D. Call and see us.

Vol. XXVII. MAY 29, 1915 No. 22

Advertisements—Good and Otherwise

How the Use of Out-of-Date Cuts Affected an Otherwise Splendid Advertisement — Atmosphere in Advertising—Some Recent Advertisements— Using Good Illustrations.

By THOMAS E. HUNT.

DURING a recent visit to a fairly large city in Ontario, I purchased an evening paper and in looking through the pages I ran across the advertisement of a well-known retail hardware firm. The advertisement occupied two-thirds of a page in one of the most prominent sections of the newspaper. The heading of the advertisement was all that could be desired. An illustration 12 inches in width showing a residential street, appeared in the upper portion of the ad. and was decidedly attractive. The introductory reading matter was well and carefully written and referred to the necessity and advisability of using paint to improve the appearance of the neighborhood. The lower half of the ad was used for featuring various paint products. Each product was featured in a small panel measuring about 2 x 2¼ inches. There were twenty panels each featuring a separate product, such as white enamel, both tub enamel, gold enamel, varnish, stain, etc. The reading matter in each panel was right to the point and the prices of the products in various sized packages were given. In each panel there appeared an illustration of a lady who was supposed to be painting or varnishing, with the goods advertised.

Newspaper advertisement by D. Hall, Sutherland, Canora, Sask. The electros used in this advertisement were supplied by the electro service department of Hardware and Metal.

A Bad Fault.

The advertisement taken all round was exceptionally attractive and could be classed as an excellent ad. had it not been for one unfortunate fault. The small illustrations used in the panels were sadly out-of-date.

In the panel, featuring bath tub enamel, the illustrations represented a lady painting a bath-tub. The lady was dressed in the style which was in vogue (according to the editor of a style magazine twenty years ago). In the panel featuring gold enamel, the illustration showed a lady with her hair dressed in the style of at least ten or fifteen years ago. In the panel featuring fly screen paint, the illustration showed a lady wearing a waist that has been out of date for at least ten or fifteen years. The lady's hair was also done up in a manner entirely different to any style of to-day. Another lady using stove pipe enamel was working over a sadly-out-of-date stove.

I took the advertisement to an office where a number of ladies were employed and asked for their opinion of it.

They nearly all remarked on the out-of-dateness of the styles in the illustrations, and two ladies remarked that if the goods were as old and out of date as the styles they would not care to use them. Regarding the latter remarks, the writer knows that the goods featured in the advertisement are of a very high quality, and wondered how many of the ladies who read the advertisement would receive the impression that possibly the goods offered were like the illustrations, somewhat behind the times.

The advertisement, no doubt, drew some customers, but how many ladies hesitated on account of the out-of-dateness of the illustrations. The writer showed the ad. to six ladies, and in each case their first remark referred to the styles of the ladies' dresses, hair, etc. The advertisement was certainly one that had been prepared for the purpose of pulling "ladies' trade." The out-of-date styles would certainly have the effect of creating an unfavorable impression, for the ladies are very critical regarding styles. If the reader's first impression of an advertisement is unfavorable, a great deal of its effectiveness has been lost.

I read a very interesting story a few days ago, entitled putting "atmosphere" into advertising. It read in part as follows:

"What is it that makes you look twice at some one particular advertisement as you thumb over the pages of a magazine? What makes you stop reading your newspaper to glance at the

An exceptionally well set-up advertisement by the Macphail-Smith Hardware Co., Nanaimo, B.C. Electros from Hardware and Metal's electro service were used for illustrating the lines featured in this advertisement.

advertisement on the opposite page? There is nothing startling about either of them, and yet both possess a certain indefinable attraction that invites attention—and gets it.

An advertisement, to be successful, must be read. It is not sufficient that it attract attention—any sort of a splurge in heavy black and white will do that—it must go further, and make a favorable impression, putting the observer into a receptive mood, and gently insinuating itself into his or her good graces.

A heavy splash of black ink, decorated with a dozen different styles of white lettering, always gives me an impression of having received a slap in the face—makes me want to turn the other check, or retaliate with a smash on the jaw.

Such an impression does not tend to create a friendly feeling towards the advertiser, or a favorable impression of his product. Rather does it arouse antipathy, and drive away possible buyers.

The difference may be explained in one word—atmosphere.

Atmosphere is something you can intuitively recognize—you can neither see, nor feel, nor describe it. And yet, without it, you can instantly see that there is something missing.

Advertising, without atmosphere, is lifeless—dull—uninteresting.

But how, then, is this elusive quality—this indefinable "something"—to be caught and utilized in the preparation of your copy?

By the intelligent use of imagination, good taste and originality.

Take, for example, such a product as ladies' high-grade gloves. Here we must consider the class of people to whom these gloves should appeal. We must consider the life and surroundings of our prospective purchasers, selecting an average type of the woman of fashion and mentally enumerating the various occasions on which she would wear gloves.

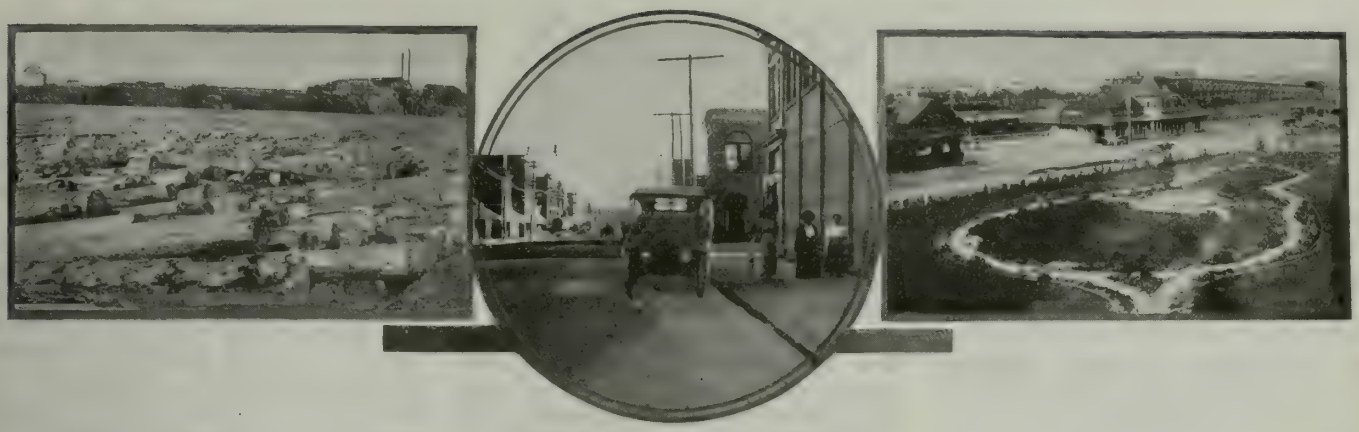
This gives us material for a number of illustrations showing our "dream lady" at the ball—in her box at the opera—on the street, alighting from her motor—at the counter, buying gloves.

These mental images may then be transferred to the mind of a clever artist, who will work them up into attractive illustrations, with appropriate borders to match.

Now, having obtained the proper setting for our word picture, the next step is the preparation of copy to fill the space in a type of sufficient size to make easy and pleasant reading. The text must be appropriate to the illustration, interesting to the class of readers it is desired to reach and influence, and the impression of "quality" must permeate every line and phrase.

Then comes the selection of type faces, for the ordinary Roman type used in the reading columns of the newspapers is devoid of "atmosphere."

The most favored type faces for advertisements of this nature are Cheltenham light face for the body matter,



A well illustrated and seasonable advertisement by the Mills Hardware Co., Hamilton, Ont. This ad. features a large number of spring and summer hardware lines.

with Cheltenham bold for display—Della Robbia for the body, with Jensen or Florentine Bold for display—or Caslon for the body with Plymouth for display.

There are many other distinctive type faces besides these, such as Florentine in combination with Abbot Old Style or Pabst in combination with Post, but any of the three first mentioned may be suc-

Issues Before Alberta Convention

Retailers in Alberta Getting a Small Debts Court Act Through After an Energetic Struggle—They do not Like the Dumping of Bankrupt Stocks on the Market for Consumers and are Working for a Change—Neccessity of Trading at Home.

Special Correspondence.

RED DEER, Alta., May 26.—The second annual convention of the Alberta Board of the Retail Merchants' Association of Canada, took place at Red Deer, Alberta, on May 18, 19 and 20, Tuesday, Wednesday and Thursday at which nearly every district of the Province was represented, about fifty delegates in all being present.

Three of the much discussed questions were the Mail Order Question, Co-operative Societies, and the Disposal of Bankrupt Stocks. The general feeling was that it would be very difficult to take any very definite action in any of these cases, although the meeting gave no intimation that they would by any means give up the attempt to better these conditions as they exist in the Province at the present time. There were many other matters discussed and instructions given to the secretary to carry out the decisions arrived at.

Addresses by three Alberta men outside of the Association: E. Michener, M.L.A., and Leader of the Opposition, H. H. Gaetz, President of the Pharmaceutical Society and F. R. Freeze, secretary of the Alberta Canadian Credit Men's Association, formed a break in the regular business proceedings. This together with an automobile trip to Sylvan Lake, a summer resort west of Red Deer, made the gathering an enjoyable as well as a profitable one.

The following resolutions were presented:—

RE TRANSIENT TRADERS AND PEDDLERS.

"That this convention is desirous of bringing before the Minister of Municipalities, the question of transient traders and peddlers with the request that he consider and prepare an amendment to the rural municipalities Act, giving power to deal with such matters."—Moved by A. M. Anderson, (Bawlf), and J. Miller (Stoney Plain).

The secretary explained that villages, towns and cities already had the power to impose a tax on transient traders, and peddlers.—Carried.

RE CO-OPERATIVE ASSOCIATIONS.

"That the secretary is hereby instructed to write the secretary of the Canadian Credit Men's Association thanking them for the resolutions re Co-operative Associations and expressing appreciation of same."—Moved by G. A. Smith (Innisfail), and Mr. Cruickshank (Hillcrest).

This refers to the resolutions mentioned in the President's address.—Carried.

RE SMALL DEBTS COURT ACT.

"That the president for the ensuing year shall, when elected appoint a committee (which may consist of the executive board), to draw up and submit to the Attorney General Dept., additional suggestions regarding the Small Debts Court Act now under consideration by the Government."—Moved by Mr. Greensides (Lougheed) and A. M. Anderson (Bawlf):—Carried.

The members called for a copy of the proposed act.

RE THE ABOLITION OF WEIGHTS AND MEASURES FEE.

"That this convention feels that the imposition of a fee upon the individual merchant under the Weights and Measures Ordinance is an injustice and the secretary is hereby instructed to take the matter up with the Dominion Board with a view to having such fee made a public charge."—Moved by H. H. Gaetz (Red Deer) and Mr. Greensides (Lougheed).—Carried.

At present the **merchant** has to pay the Government for having his weights and measures inspected for the protection of the **public.**

REDUCING MINIMUM WEIGHT OF CAR LOAD OF FLOUR.

"That it is the opinion of this convention that the minimum weight of a car load lot of flour should be fixed as follows:—40,000 lbs. at the new rate or at the option of the purchaser 30,000 at the old rate."

N. B. Good of Lethbridge, explained that formerly 30,000 lbs. was the minimum, but the rate had been reduced per car and the minimum had been raised to even things up. As some of the merchants do not want such big lots and are willing to pay an increased rate and get a smaller lot, so the purpose of the resolution was to give the purchaser the option of using the old system or the new one.—Moved by Mr. Cruickshank of

(Hillcrest), seconded by J. Miller of (Stony Plain).—Carried.

SEED HOUSES TREATMENT TO RETAILERS.

"That the secretary obtain further information regarding this matter and take such steps as are necessary in accordance with same in conjunction the executive," Some of the delegates claimed to be securing good treatment so resolution was laid over.

RE SHIPPERS STATING WEIGHT OF SHIPMENT ON BILL OF LADING.

"That this convention endorses the suggestion contained in letter of April 27 from the Canadian Credit Men's Association—that shippers state weight of shipment on all bills of lading."—Moved by W. T. Coote (Red Deer) and N. J. McDermid (Calgary).

RE SELLING OF BANKRUPT STOCKS.

"That the secretary take up the matter of the disposal of Bankrupt Stocks with the secretary of the Canadian Credit Men's Association."—G. A. Smith (Innisfail) and G. A. Studer (Didsbury), strongly urged that something should be done to prevent these stocks being unloaded in competition with the retail trade. The officials will go into this matter this year.

RE FIRE INSURANCE.

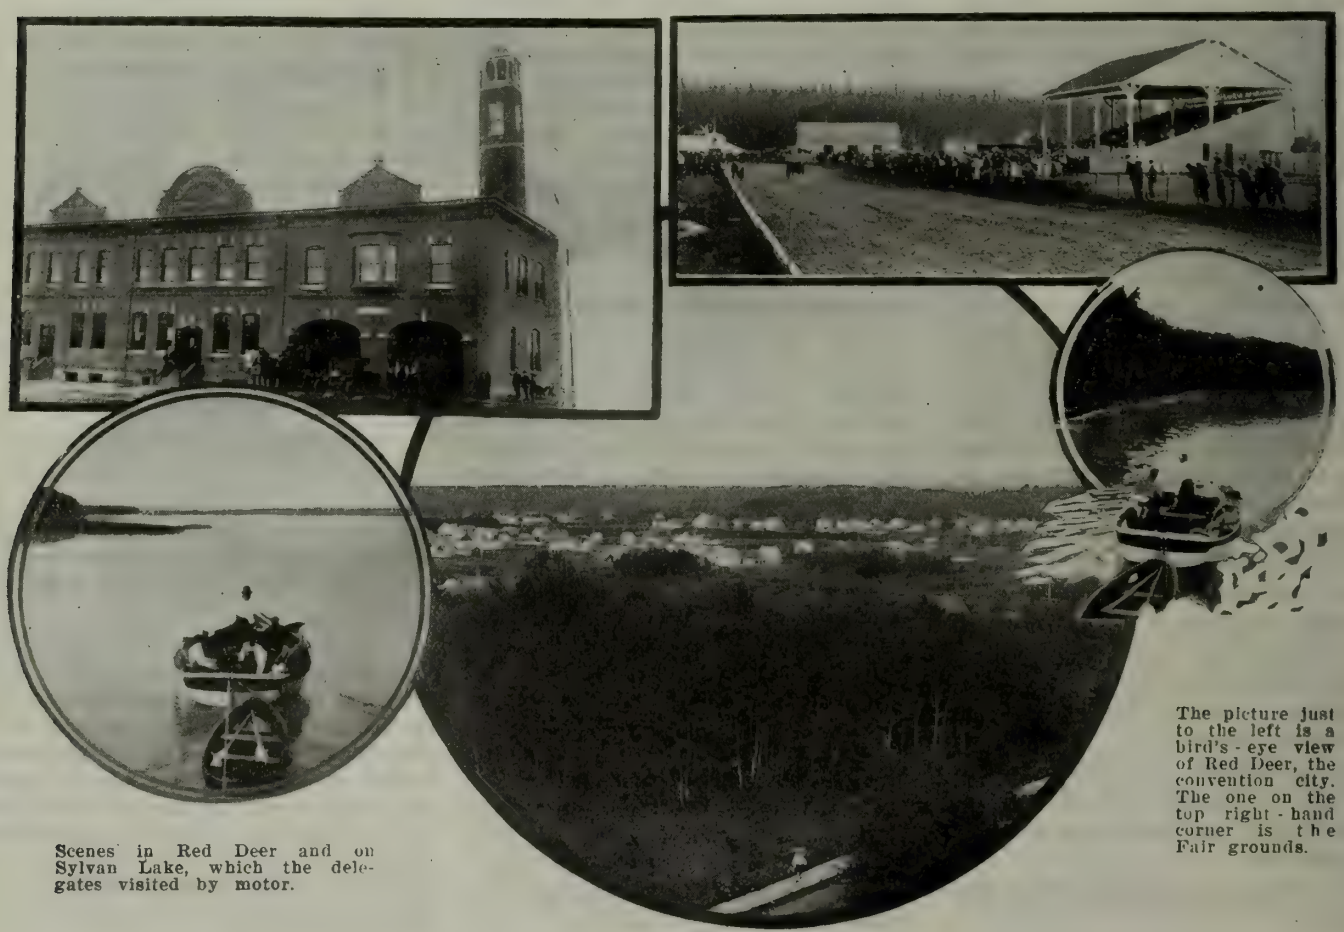
"That the Dominion Board be requested to take up with the Dominion insurers in obtaining redress or satisfaction from the Board of underwriters so that some means be provided to remedy this disability."—This was withdrawn.

The evening session of the first day consisted of addresses of welcome from Mayor Carswell of Red Deer, W. B. Welliver, president of the Board of Trade, and T. A. Gaetz, on behalf of the Red Deer Branch of the Retail Merchants' Association, following which came the addresses of E. Michener, H. H. Gaetz, and F. R. Freeze.

THE SELLING OF BANKRUPT STOCKS.

Following Mr. Freeze's address a discussion ensued regarding the selling by the Canadian Credit Men's Association, of bankrupt stocks and many minor misunderstandings between this Association and the retailers were cleared up. But time did not permit of as thorough an understanding as some of the delegates would have liked, and on Wednesday a resolution was passed that the secretary go more fully into this matter with Mr. Freeze at a later date.

Address of the President.



In his address, T. A. Gaetz, the President, said in part:—

"During the year we have enlarged our Association from 80 to about 135 branches—that is to say we are now represented in practically all the larger towns of the province. This organization has not been accomplished without a great deal of expense and hard work and this work has fallen largely on the secretaries. As a proof of the value of organization, let me point out to you the fact that at last we have had a Small Debts Court Act brought before the Provincial Legislature which is now before the Court of Appeal for consideration and ratification, after we are assured by the Attorney-General's department it will come again before the House at the next session and will be passed. We have also been successful in obtaining the passing of amendments to the Mechanics Lien Act which will prove of great benefit to the lumber, hardware and builders' supply trades.

Selling to Co-operatives.

"We have also been able to come to an understanding with the wholesale trade with regard to the selling of goods to Co-operative Associations and to consumers direct. This cannot be accomplished at one stroke but by continued united effort we will soon be able to say that all goods sold to the consumer go through the proper retail channels. Individuals could not bring about these

(Continued on page 35.)

Scenes in Red Deer and on Sylvan Lake, which the delegates visited by motor.

The picture just to the left is a bird's-eye view of Red Deer, the convention city. The one on the top right-hand corner is the Fair grounds.

Addresses at Red Deer Convention

Member of Parliament's Appreciation of the Retailer—A Valuable Asset to the Community—Keeping the Home Trade at Home — Attractive Stores and Goods Play Important Part.

E. MICHENER, M.L.A., and leader of the Alberta Opposition, eulogized the retail when he said:—

1. The retail trade builds up centres of population for the convenience of settlers.

2. Supplies through these centres make a home market and also a distributing point for farm products.

3. Creates increased values in town and farm lands.

4. Stimulates wholesale trade and manufacturing.

5. Promotes social, educational and religious advantages among the people.

6. In a general way helps to provide all modern conveniences such as telephone, electric light, water, and sewerage systems incident to a community interest.

7. Contributes to the general development of prosperity of the people of the Province at large.

Along with the cultivation of the land there necessarily grow up natural centres of trade for the convenience of the settlers, hence numerous small centres of population grow up, and principally along lines of railway transportation at strategical centres where railway lines meet, large centres of trade are established. An old principal of political science was that only the producer was an asset to a community, but it is now generally conceded that everyone that contributes something to the general good is an asset. These centres are not only a convenience for the settler to get supplies, but also as a distributing and marketing centre. The question as to the necessity of the retail trade is whether or not the consumer could get the goods cheaper from the wholesaler or manufacturer. The wholesaler saves clerical work as well as freight rates by selling in bulk lots, but if he supplied small lots the additional freight or express and clerical work would amount to as much as the retailer's legitimate profit, and at the same time he would not have the advantage to exhibit his goods when and where they are wanted as the retail stores do. The same thing applies to mail order houses—a customer seldom reaps any benefit by sending away from home for his goods.

The man who will be loyal to the interests of his community will be loyal to the wider interests of his Province and his country.

KEEPING THE TRADE AT HOME.

H. H. Gaetz, president of the Pharmaceutical Society, spoke on "Keeping Trade at Home," saying that the retail merchant who is so valuable a member to a community, and who furnishes employment and an excellent home market for farmers' products should not have his infant enterprise crushed by larger and more solidly established concerns in other communities. He questioned the utility of appealing to sentiment to keep trade at home. The ordinary retailer cannot buy direct from the manufacturer because of agreements between manufacturers and wholesalers, but the big retail concerns with which he must compete to keep trade at home are under no such disability.

"You have here in this organization an instrument capable of being made a very powerful factor if only it be made sufficiently cohesive and have the general support of Canadian retailers. Legislation should be invoked to maintain equality of opportunity; one man's dollar should be as good as another's, although as a matter of fact it is not," he said. The only force available to keep trade at home is that of attraction, and the store and the church are close parallels in this particular. The get-rich-quick impulse seems to be in the very air in this country, but experience of others teaches us that haste to acquire financial success is folly. Service is the hand-maiden of efficiency, and it is a great factor in keeping trade at home.

It was a politician and not a business man who gave currency to the epigram "Business is business"—it is nothing of the kind, and the wise merchant recognizes that business is service. "To keep trade at home we must apply ourselves, by efficient means, to the service of our several communities, having cleared our path of every artificial obstruction. Only in this way can we accomplish our aim and through it attain success."

• • •

TAKING OVER BANKRUPT STOCKS

F. R. Freeze spoke of the financial stress that has been "hitting the West more that any other part of Canada." He said that during the last year there was a total of $35,000,000, in failures in the country, which is more than double any previous year in the history of the Dominion. "Three years ago," he declared, "capital came freely from the Old Country, and emigrants came over. Now there is no money nor emigrants coming in. One of the principal causes of this state of affairs, is, of course the war." Mr, Freeze stated that quite a number of merchants failed because they lacked knowledge and capital. "It is not unknown to us," he said, "that estates go into the hands of assignees with debts two or three times the amount of the capital started with." It had been suggested to him by some retailers that wholesalers should take back bankrupt stocks, but this was not at all feasible. Another suggestion was that storage depots could be established and the stocks sold by travelers, but he did not think that this scheme would please the country merchants very well. Questioned by a delegate he admitted that the wholesaler was to a certain extent to blame for some of the retailers being overstocked. He suggested that the retailers themselves should buy these stocks.

The delegates generally considered this to be the best way out of the difficulty, and this was often done, but in very many cases a retailer has so much stock on hand that he is unable to handle any more.

Picton, Ont., May 3, 1915.

Editor of Hardware and Metal:

Toronto, Canada.

We read with great interest the article in the May 1 issue of your valuable journal by Bevan Lawson on "Dealer's Profit and Nationally Advertised Specialties," and to our minds it is one of the fairest and best-balanced articles we have ever read. While it costs us 20 per cent. to do business, there are quite a number of lines we handle that do no more than clear that amount, still we are glad to handle owing to the convenience it makes for our customers, and we know positively it pays owing to the increased trade we receive otherwise through doing so. With us it is not so much a matter of making a big profit on every line we sell, as it is to have most everything our customers are apt to ask for, and we dearly love to handle Nationally Advertised Specialties, for the selling of same is made so easy for us by the makers.

CARTER BROS.

Show Cards You Can Make

Illustrations from Advertisements in Hardware and Metal Used in Making Show Cards —How the Card Acts as an Aid to Sales—Three Attractive Show Card Suggestions.

By R. T. D. EDWARDS.

FOR this issue of Hardware and Metal I have prepared three show cards, using illustrations which appeared in advertisements in the May 15 issue of Hardware and Metal. Every hardwareman who has made a study of window trimming no doubt realizes that a neat show card adds greatly to the value and attractiveness of a window display. Not only does the show card appear attractive in the window, but it also directs attention to some particular feature to be found in the display.

Let us refer for a moment to the plane, featured in one of the accompanying cards. This plane is one that has many distinctive features. By placing the show card in the window where the plane is displayed you not only direct special attention to this particular plane, but you also impress on the mind of the party looking at the plane in the window that it combines seven tools in one —in compact and practical form. You also tell that a special booklet has been prepared describing the plane and its uses, and that customers can have the book for the asking. How could you accomplish all this if you displayed a plane only and did not tell of its distinctive features. Of course, if you displayed the plane alone there are some mechanics who would recognize it— having seen a similar plane in use at some time or other. They might not, however, know of its exceptional usefulness. This may be drawn to their attention by the show card and the booklet. When customers enter the store and ask for the booklet, the clerk after complying with the customer's request, can show the latter one of the planes. Allow the customer to handle the plane. Do not simply point to it in a show case or wall cabinet. Take the plane out of the case and let the customer handle it. Customers like to handle the goods, in fact many of the largest and most successful retail merchandising concerns try as far as possible to have all goods displayed within easy reach of customers. Every mechanic when buying a tool of any kind whether it be a plane, trowel, hammer, chisel, or saw, likes to handle the tool.

The plane featured in the accompanying card is only one of many tools illustrated in each issue of Hardware and Metal, and these illustrations can all be used in preparing show cards suitable for use in window displays, show cases, on counters, etc.

One reason why show cards, in past years, have not been generally used as much as they should have can be to some extent accounted for by the difficulty some window trimmers and clerks have experienced in drawing illustrations. This drawback has been overcome by card writers and window trimmers using the illustrations from the advertising pages of Hardware and Metal—pasting them neatly on show cards and then applying the necessary lettering. The series of articles on show card writing now running in Hardware and Metal

The illustrations used in preparing the above show card were taken from the advertisement of Butterfield & Co., Inc., on page 12 of the May 15 issue of Hardware and Metal.

(the articles appear in the first issue of each month) have been prepared so that they can be understood by any hardware clerk and there is no reason why any hardware clerk with average ability cannot follow the course successfully and become a good card writer.

The Butterfield Card.

The illustrations used in preparing the Butterfield show card were taken from the advertisement of Butterfield & Co., Inc., which appeared on page 12 of the May 15 issue of Hardware and Metal. This card shows a combination of brush and pen work. The directions for making this card are as follows: After securing a piece of cardboard the desired size, cut the illustrations from the advertisements and paste them on the cardboard with thick paste. You are then ready for the brush and pen work. The "Made in Canada" was lettered with a stub pen.

The illustrations used in preparing the above show card were taken from the advertisement of Stanley Rule & Level Co., on page 15 of the May 15 issue of Hardware and Metal.

This style of lettering is called script. The next two lines, "The Tools You'll Like" were done, in Roman formation, with the same pen. The name "Butterfield," was made with a No. 6 red sable writer brush. The words, "Taps, Dies and Reamers," were made with a stub pen.

The illustration used in preparing the above show card was taken from the advertisement of Findlay Bros., Co., Ltd., on page 17 of the May 15 issue of Hardware and Metal.

The Arklan Favorite Card.

The illustration used in the preparation of the "Arklan Favorite" show card was taken from the advertisement of Findlay Bros. Co., Ltd., which appeared on page 17 of the May 15 issue of Hardware and Metal. The original from which the accompanying reproduction was made measured 14 x 22 inches. In preparing this card cut the illustration from the advertisement and paste to the cardboard with thick paste. The heavy ruling surrounding the card is grey in color and this shade can be secured by mixing black and white color together. The heavy lettering at the top of the card and the price were made with a No. 6 brush. The small lettering was done with a stub pen.

The illustration used in preparing the "Stanley Forty-Five Plane" card was taken from the advertisement of the Stanley Rule & Level Co., New Brittain, Conn., on page 15 of the May 15 issue of Hardware and Metal. The lay-out on this card is different to any shown before. The heavy brush stroke (Roman lettering) is particularly striking because of its free and easy formation.

The finer lettering was done with a stub pen. The two circles, one surrounding the illustration of the plane, and the other surrounding the lettering, "Ask for Booklet Describing It," balances the card nicely.

The materials used in making the accompanying cards are: No. 6 red sable brush, stub pen, black and white card-writers' color, ruler, scissors, photo paste, compass to draw circles, white cardboard.

ADVERTISEMENTS—GOOD AND OTHERWISE.

(Continued from page 28.)

cessfully used to give distinction to the advertisement.

In preparing a series, it is advisable to stick to one face of type throughout, for the body, and one face for the display, confining yourself to two type faces, or three at most.

This will give an air of sameness to all the advertisements in the series, each successive advertisement instantly recalling its predecessor to mind, and variety may be obtained in the art work, border, size and form of each advertisement.

The type should be set with plenty of white space around it, leaving an indention on each side, between type and border, of at least one pica. In the case of a large advertisement, occupying three columns or more, in width, an indention of from three to six picas in width might be used to advantage.

Good taste is a prime essential in putting "atmosphere" into advertising. This is expressed in the art work and typography, which should also bear the stamp of originality.

Imitators have no business to be engaged in the profession of advertising. Any one can copy the ideas of an original thinker, but the work of the latter, like the production of an old master, always has intrinsic merit, while the crude efforts of the "copyists" are rarely worth their price.

The part that originality plays in the production of successful advertising copy and layouts can not be overrated. It is easy to "swipe" or "adapt"—it is difficult to originate. Hence the scarcity of really attractive copy—copy possessing that elusive "something" which we call "atmosphere."

The Wanamaker store created what is now universally known as the "Wanamaker style" of advertising. This style of copy and layout has been adopted by scores of retailers in the States and in Canada, but there is a vast difference between the original and the imitation.

Rogers, Peet & Co., New York, created an individual style of advertising which has never yet been successfully imitated, although it has been copied by dozens of men's wear stores.

Prince Albert Tobacco advertising stands alone as an example of "atmospheric" copy appealing to the sporting class.

Cocoa Cola advertising is strong in atmosphere.

Tiffany's advertising, in which no illustrations are ever used, is also charged with atmosphere.

The advertising of the Packard Motor Car is, perhaps, the most familiar example of atmosphere in copy, probably because the author of this particular advertising is widely advertised as an expert on "atmosphere."

To put atmosphere into your advertising it is not always necessary to use illustrations. Much of the Packard copy and all of the Tiffany copy consists of merely type and border.

The selection of an appropriate type face is quite as important as the preparation of attractive illustrations, although the use of illustrations makes it easier to secure the desired effect.

In a recent advertisement of The Aeolian Company, more than one-third of the space was devoted to the illustration of a Doric column, at the base of which was an incense burner. The smoke from the incense burner was winding about the column as it rose. In the lower right hand corner was a small cut of the Vocalion, the instrument this particular advertisement was intended to sell. The remainder of the space was filled with reading matter, and the advertisement was devoid of any sort of border. The space occupied by the mythological illustration cost the advertiser $50 in the publication from which the advertisement was taken, while the space occupied by the cut of the instrument cost less than $5. The object was, of course, to print an emotional picture to advertise a product which appeals to the emotional side of the prospect's nature. Music is a difficult product to illustrate at best, and this treatment was, at least, ingenious.

There are as many degress of "atmosphere" as there are different sorts of

(Continued on page 49.)

Price Book Nearing Completion

Officers of the Ontario Retail Hardware and Stove Dealers' Association Are Rushing Through to Completion the Members' Retail Price List — Distributed Free to Members.

PLANS which the officers of the Ontario Retail Hardware and Stove Dealers' Association had under way for the purpose of instilling new life into the association, increasing the membership, and for giving the retailers a real service between conventions, appeared in the April 10 issue of Hardware and Metal. Special mention was made of the new price book which Secretary Macpherson was preparing, and a copy of which when completed, was to be given free to each member of the Retail Association. Two illustrations showing two of the sheets in rough form were reproduced in the April 10 issue. The finished product is illustrated in this issue.

The accompanying illustrations are reproductions of the carriage bolt price list and the coach and lag screws price list. The originals measure 8½ x 14 inches. These sheets, along with several others are to be furnished complete with a loose leaf binder free to all paid-up members of the Ontario Retail Hardware and Stove Dealers' Association.

Secretary W. H. Macpherson, of Prescott, Ont., last week sent out a letter which gives details regarding the price lists. The letter reads as follows:

"Dear Sir,—You have doubtless read the circular mailed you under date of April 15th, relative to the issue of a series of price lists for the use of the members of our association.

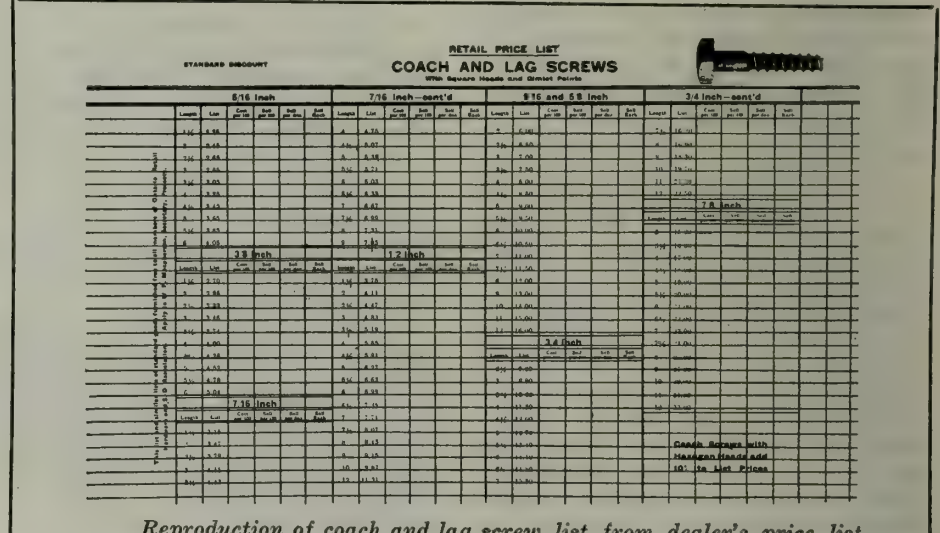
The first issue of the series has just been received from the printer and I have pleasure in enclosing you a copy to illustrate the manner in which the various lists will be prepared. As stated, the members will be furnished with two copies of each list, all of uniform size, one of which may be mounted on cardboard and hung near the stock, and the other sheet filed in the loose leaf binder to be furnished to each member for office use. You will notice that the lists are printed on heavy ledger paper to permit of erasures being readily made when price changes occur. The following lists are now ready for publication, some already in the printers' hands:—Coach or lag screws, flat head wood screws, flat and round head stove bolts, sleigh shoe bolts, tire bolts, round head wood screws, blank nuts, square and hexagon, iron washers.

Other lists such as bar iron, wire screening, poultry netting, malleable pipe fittings, iron pipe (black and galvanized) are under preparation and will be furnished to members as soon as published.

Net costs at standard discounts will be furnished for each list for insertion by members in his private cost mark. Concessions in price and extra discounts should mean extra profit to the dealer fortunate enough to receive same, and only standard costs should be observed in fixing retail prices.

SAMPLE PRICE LISTS.

W. F. Macpherson, Secretary, Ontario Retail Hardware and Stove Dealers' Association, Prescott, Ont., is at present mailing out to hardware dealers of Ontario (as far as his mailing list covers) copies of the carriage bolt and coach screw price lists, with circular giving particulars regarding the service branch of the association. Secretary Macpherson extends an invitation, through Hardware and Metal, to retailers who do not receive copies of the price lists, to write to him direct. On receipt of request samples will be mailed promptly.



With these prepared lists, new prices can be quickly filled in and extra profits realized, when often the lack of time required to get up a new price list, defers getting the advance for weeks, at a very considerable loss. Every dealer, I am sure, will confirm this statement.

I would very much appreciate your approval of the work being done for the trade by our association, and would like you to be one of 500 to apply for membership this month. A $3 membership fee will give you membership to December 31st, 1916, all the "aid to members" promised, including price lists and binder, collection letters, lien notes, and all other aids as are extended from time to time. I have already received a goodly number of applications and if yours has not been forwarded, am sure that you will see in the proposition outlined a large and sure return for a very small investment.

Members who are paid up to December 31st, 1915, will receive all issues of lists as soon as ready.

By referring to the coach and lag screw list reproduced herewith it will be seen that the sizes usually carried by hardware firms have been listed. The list price is given for each size. A space has been provided for "cost per 100." If a merchant does not wish to insert the net cost per 100 he can simply fill in the line with the discount. Spaces are provided for selling price per 100, selling price per dozen, and selling price each.

By using these sheets the hardwaremen can save considerable time in making price changes. The chief value, however, will lie in the fact that the clerks from the junior up will have a reliable guide to consult when in need of the

INTERMEDIATE SIZES TAKE NEXT LARGER SIZES

Reproduction of carriage bolt price list from dealer's price; prepared for members of the Ontario Retail Hardware and Stove Dealers' Association.

price on one or a hundred coach screws. Unfortunately in too many hardware stores such goods as bolts, screws, coach screws, etc., are sold by guess, (very often at a loss) and the clerks have nothing to guide them when quoting prices unless they consult the proprietor or head clerk—and very often the price on these lines is guessed by the higher ups. Only a short time ago the writer had occasion to purchase 1 doz. carriage bolts ¼ x 4 inch. The clerk charged ten cents for the 12 bolts. On returning next day for 12 more exactly the same size, another clerk charged 8 cents for the same goods. Mighty poor advertising for the store, you say. Yes, and mighty hard on the proprietor's profits, if many lines are sold that way. If the clerks had been provided with a proper price list which they could have consulted—instead of guessing—the variation in price would not have occurred and the firm would have secured a profit on the sales instead of selling at a loss.

The lists which are being supplied by the association are printed on heavy ledger paper. This also is a very desirable feature.

Retailers should be able to see that a series of lists embracing those mentioned in Mr. Macpherson's letter would prove very valuable.

Secretary Macpherson has received during the last few weeks a large number of applications for membership, and it is quite evident that retailers are taking a renewed interest in the efforts that are being put forth by the officers to increase the membership and to promote the "service department" of the association.

Enquiries From Quebec.

Secretary Macpherson has had several enquiries from merchants in Quebec Province, as to how to obtain the service which is being offered by the Ontario Association. By a clause in the constitution of the Ontario Retail Hardware & Stove Dealers' Association, dealers in Quebec may join the association, on payment of regular membership fee of $3, which will entitle them to full service.

ISSUES BEFORE ALBERTA CONVENTION.

(Continued from page 30.)

results. Single towns or cities could not accomplish them—it is only by the unison of the whole of the province that we have been able to do what has been done.

"We have been able to assist our members by preventing them from making bad debts. Bad debts are the greatest menace to our financial standing and I think that the majority of assignments in the past have been induced by bad debts. A better condition of our accounts can be brought about by our keeping tab on our delinquent debtors and reporting them to one another. That is a matter in which the local branches can make themselves effective and of great value to the themselves.

Against Mail Order Buying.

Then another great evil in our business is the mail order or catalogue house problem. We are and have been working on this question for some time, using its influence with the eastern manufacturers in getting them to refuse to supply these houses and in a great many cases we have succeeded. We for our part are doing our best at this end to educate the purchasing public to realize the folly of sending their money out of the province instead of supporting their home town. We are trying to show them that the value of their farms or property depends upon the progress of the adjacent town, and that the progress of the town depends upon the financial stability of the retail merchant. He is the backbone of the community. We are trying to get the Legislature to realize the enormous drain that these mail order houses are on the resources of the province. We are endeavoring to obtain an amendment to the Municipalities Act. so that local authorities will have power to deal with the matter.

"When we realize that the orders and cash sent out of each town district is equivalent to an extra store doing a cash business of upwards of sixty thousand dollars a year it is appalling and yet individually we can do nothing much to prevent it except to educate our home public to support their home district. Any effort to keep this trade where it belongs deserves the support of every retail merchant of the province, it affects every one of us.

"Another trouble we have is the disposal of bankrupt and assigned stocks. We are hoping to come to an understanding with wholesalers re this."

Treasurer N. J. McDermid (Calgary), presented the financial statement. Secretary W. H. Andrews (Calgary), in his report said that he had recently attended the convention of the Saskatchewan Board at Saskatoon and that he had obtained authority from the Dominion Board through their President, B. W. Ziemann to go ahead and organize British Columbia and form a joint Board with Alberta until such times as British Columbia could maintain itself.

All three reports were adopted. A hearty vote of thanks was tendered the Red Deer members for their kindness in arranging the auto trip ot Sylvan Lake.

MAKING FLINTLOCKS

It hardly seems possible in this age of powerful rifles, quick-firing machine guns and big cannon that there should be a demand for flintlocks, but such is the case, nevertheless. In Great Britain there is a factory manufacturing flintlocks, which is kept busy turning out these antiquated firearms. The explanation is that in many semi-civilized countries, more or less under British influence, the authorities do not permit the natives to secure modern rifles, but allow them flintlocks which enable them to secure the needed game, but do not make them a menace to the peace of the community. It might be a good plan after the war is over, says the Journal of Commerce to arm the Germans with these antiquated firearms.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, MAY 29, 1915 No. 22

THERE ARE a lot of people who think more of a cheerful manner than they do of a 5 per cent. discount. Cordiality is the cheapest thing you can dispense in your store.

• • •

BAD HABITS are the little threads with which the weak Lilliputians bound the strong Gulliver in helplessness. Good habits are like a well-made harness, enabling us to do our work with less friction and waste of energy.

• • •

MANY PEOPLE forget that the big city mail order houses cannot give goods away below cost any more than can the local merchant, and that with a big salary list, a high rental, a high tax bill and other city expenses it is not likely that goods can be sold at less than cost.

• • •

THE MAJORITY of retail advertisers of today must direct their copy to the women of the community. They are the purchasing agents. Convince the women, and you'll sell to the rest of the family. The woman studies where and what to buy; the man works to pay the bills.

• • •

IT'S A GOOD thing to be discontented when it spurs a man on to greater endeavor. Keeping up to last year in sales is standing still, so the merchant should not be content unless his business increases. You cannot measure the value of inspiration that comes from constantly increasing sales. And the way to bring that about is application. Dig in and do it—then keep at it.

• • •

COMMERCE IS not mere money-getting. It is a science, as banking and law and medicine are sciences. It should be studied as such, for with such study comes not only greater efficiency but a higher standard of ethics as well. There is no more pressing public service to be done than the discovery of the best ways of reducing the cost of distribution and of elevating business to the standards of a profession.

Spelter Soaring

LAST week we referred, in this column, to the very unsettled condition in the metal markets and to the abnormally high prices being asked for some metals. The chief feature this week has been the further advance in the price of spelter. Advances by different Canadian firms range from 3c to 5c per pound. The spelter situation is at present controlled largely by American firms. The American Metal Market in a report issued during the middle of the week said in part:

"The only comment that one can make about the spelter market to-day is that the buyers have gone perfectly crazy, and are willing to pay almost any price that is asked for any delivery up to the end of the year. All sense of values has been lost, and no thought is given to the cost of production and the cost of manufactured articles based on the prices now ruling for spelter, but it is simply a wild scramble to buy the metal at such prices as the producers care to name.

"Prompt and June spelter has sold at higher than 18.50c E. St. Louis, and it is claimed that 19c has been paid, and it is not unlikely that it has. July has been sold at 18.50c, and July, August and September together brought 18c. For the fourth quarter of the year the price to-day is about 17.25c as against sales yesterday at 16.25c up to 16.75c. Dealers are biding 17⅛c for fourth quarter but cannot find anyone to sell them. The only sign of caution that buyers are showing is that they are generally refraining from contracting for shipments beyond this year, and although the first quarter of 1916 is offered at ¾c to 1c below the price bid for fourth quarter of 1915 there are no buyers for this.

"There is bound to be a reckoning one of these days for the extravagant price that spelter has been pushed up to, but we have not the slightest idea when that will be. It will come though, just as certain as can be, and there will be a different tale to tell then than there is now."

Lead has advanced in price during the past week and in many quarters higher prices are predicted. It is remarkable that with all other metals having so sensationally advanced, lead should to-day be only about ¼c per pound higher than before the war began. It is interesting to note that there has lately developed a movement for the use of lead instead of spelter in the manufacture of lead-coated sheets to take the place of galvanized sheets. It is too early to predict as to what success this movement will attain. One thing is sure, lead has been selling at very low prices and any marked improvement in the demand would undoubtedly have the effect of advancing prices. The scarcity and high prices of some metals—have, as we predicted in market reports many weeks ago—been the cause for many advances in the price of various products sold through the hardware trade.

The Western Situation

HARDWARE AND METAL'S Winnipeg market report this week notes that a prominent Winnipeg grain man stated that, so far as the West is concerned, if the weather had been hand-picked it could not to date have been much better than that which has been experienced. Another grain man made the bold prediction that the West this year is going to see a crop of 300,000,000 bushels. This prediction may not be sure of fulfilment, but there is every reason to believe that the Western crops this year have secured a better start in every respect than for years past. The better feeling resulting from good crop conditions is already having a good effect on trade, and although buying is still on a conservative basis, there is a decided improvement in business. Another statement which is worthy of note was made by one of the high officials of one of Canada's leading banks at the annual meeting a few days ago. He stated in part as follows:

"Canada is undoubtedly a great country, young, it is true, but the progress made in the last 15 years has been most remarkable, and with almost unlimited undeveloped natural resources I am exceedingly optimistic as to its future, and especially the future of this bank. As indicated in the president's address, there was a decrease in the amount of land under cultivation 1913-1914 of about 13 per cent., but it should be known that there is, at the very least, 15 per cent. (principally wheat) more land under cultivation this year (1915) than in the year 1914. I have ascertained that the rainfall up to a recent date in this year in Saskatoon district was 1.6 inches as compared with 1.75 in the whole of last year. In the Medicine Hat district the rainfall has been 3.2 inches this year, as against practically nothing last year. In Calgary district it has been 2.4, or at least twice as much as the whole of last year. In the Lethbridge district it has been 2 inches already this year, as against practically none last year. In South Saskatchewan there has very recently been five days of continued rainfall. These figures, together with the prospective prices obtainable, to my mind, are most encouraging as to the prospects up to the present time of this year's Western grain production. In the Calgary district alone in the year 1914, 281,188 head of horses, cattle, hogs and sheep were exported, as against 83,252 head the previous year. The value of these exports last year, in round figures, was $6,500,000."

The Alberta Convention

THE retail merchants of Alberta, like their brother merchants in New Brunswick and Saskatchewan, discussed a number of important questions at their convention at Red Deer, Alta., last week, a report of which appears elsewhere in this issue. President Gaetz, in his address to the delegates, pointed out one result of organized effort on the part of the retailers when he reported that the Association had assurance from the Legislature that a Small Debts Court Act would shortly become law in that province. Among the questions which came up for discussion were a number that have been taken up at nearly all conventions in recent years. Questions dealt with included the selling of bankrupt stocks; fire insurance; abolition of weights and measures fees; co-operative associations, and transient traders and pedlars legislation. The importance of the retail merchant to the community was commented upon by many speakers. The leader of the Opposition in the Alberta House in his address referred to the necessity for supporting the home merchant. The address of H. H. Gaetz bore evidence of deep thought. The key-note of his talk was struck when he said that to keep trade at home, "we must apply ourselves by efficient means to the service of our several communities, having cleared our path of every artificial obstruction."

Quick Service

WITHIN the past few weeks three important conventions of retail merchants have been held. One of the conventions was at St. John, N.B. and another at Saskatoon, Sask. At each of the conventions Hardware and Metal had a representative present, despite the fact that the convention meeting places were widely separated. The promptness with which complete convention reports appeared in Hardware and Metal is simply another evidence of the widespread character of the MacLean Publishing Company organization, and its ability to serve the trade and to present to readers in every part of the country real live and authentic news of what the trade is doing, thinking and talking about.

Parcel Post Abuses

SENATOR Hitchcock, of the United States Senate, says that the parcel post law existing in that country must be changed. He declares that the complaints concerning it are not due to the original defects of the Bill, but rather to the perversion of the Act by changes made by the Post Office Department. He points out that the Act itself provided extremely low rates for the local transportation of parcels, the intention being to permit the shipment of country produce to the towns and merchandise from the towns to the country, at the lowest possible rate. As administered by the Post Office Department, however, it has been possible for large catalog houses located in New York and Chicago to send their goods by parcel post from a local town to the country within several hundred miles of it. This, he says, has resulted in making the Post Office Department a machine for serving and developing great catalog houses at a very low cost of transportation. It tends to centralize more than ever the business of the country, to injure the country store and the business of the country town.

The Senator says that undoubtedly the Parcel Post Law must be changed in a number of particulars in order to prevent present abuses. He states that out on the Pacific Coast it is actually possible to ship carloads of bricks by parcel post.

An Omaha Congress man further claims that the practice of catalog houses shipping their catalogs by rail to some central point and then distributing them locally by parcel post, causes an expense to the post office department that far exceeds the postage receipts therefore.

Many abuses of the system have apparently developed which were never contemplated when the bill was passed.

The Canadian parcel post system was modelled very much after the U. S. system. During the past few months complaints have been heard from many quarters regarding alleged advantages which the mail order houses have secured through the parcel post system. They will be dealt with in an early issue of this paper.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—British Command of the Seas—Profit-Sharing Scheme—Can Germany Stand Isolation?

British Command of the Seas

From Boston Evening Transcript.

THE more statistics are studied the more it becomes evident that the British command of the seas is a fact not to be overthrown by Germany, however madly the submarine may raid. Since the war begun the British have lost to the enemy merchant vessels aggregating 460,628 tons. This total sounds large by itself, but when we remember that the net tonnage of vessels registered at ports of the British Empire must be 15,000,000, we can measure the inability of Germany to shake off the pressure exerted by British maritime preponderance. The war has not prevented Great Britain from adding new strength to its merchant marine. In the past year the merchant tonnage put into the water from its shipyards has been three times the total of that captured or destroyed by the Germans. The British naval and the British mercantile fleet lines are constantly being reinforced.

* * *

Profit-Sharing Scheme

From National Hardware Bulletin.

DURING the past few weeks there has appeared in a number of trade papers a pretty smooth story which to our mind is really a very catchy advertisement for a coupon premium enterprise.

Of course we read it as hundreds of others have done, in fact we read it several times for it was interesting, and as previously stated pretty smooth; later came full page advertisements of this coupon scheme and we read those also.

The story is beautifully glossed with the rose colored idea of better sales and increased profits.

The manufacturer buys the profit sharing coupons and packs them with his goods, which go through the regular channel to the consumer, who files away the coupons until a sufficient number have accumulated to purchase whatever strikes his fancy in the premium book. The dealer gets his compensation out of the increased demand for the coupon-bearing articles.

It is the manufacturer who pays for the coupons.

It remains now to be seen whether or not the manufacturer will fare as has the retailer in handling trading stamps. We know the latter is dissatisfied with them.

We question if the coupon scheme will bring increased demand for an article.

The trade pulling qualities of coupon-bearing goods lie chiefly in the coupon.

Let one competitor pack coupons with his products and others will do likewise, thus depriving the former of his advantage and putting all on a par in this respect.

Another thing, if the premiums stocked by the coupon firm are standard, advertised goods, and they are listed to the consumer at wholesale prices, will it not demoralize the business of merchants handling such goods just as badly as do cut price quotations by mail order houses and department stores?

We infer from the write-ups of this scheme that goods and prices are to be found as we have indicated. If such proves to be the case, we can see prospects of trouble for both manufacturer and retailer.

* * *

Can Germany Stand Isolation?

From the New York Sun.

ACCORDING to an American just back from Germany the question of the hour there among financiers is the ability of the German nation to stand isolation from the rest of the world. German students of economy, he said, are even going so far as to say that the economic position of Germany to-day is as sound as it ever was and that with her foreign trade gone and cut off from communication with the rest of the world she can live indefinitely within and upon herself without impairing her financial standing. His own answer to all such attempts to convince him was to compare the German position to the following anecdote:

Two Irishmen, joint owners of a bottle of whiskey, set out to a fair in a neighboring town with the intention of retailing the whiskey at a shilling a drink. The way was long and the sun hot. Soon one of them suggested that a drink would do no harm and there would be still plenty to sell to strangers. The second refused and insisted that his partner should pay his shilling like a regular customer. The drink was taken and the money changed hands. Presently the power of resistance of the second was weakened by a whiff of his neighbor's breath and he too had and paid for his drink. To shorten the story both came to themselves many hours later to find their bottle empty and each with exactly same money in spite of the fact that each drink of whiskey had been bought and paid for in the regular way.

* * *

Mistake in Corporate Management

From American Metal Market.

WE have in mind two large corporations engaged in practically the same line of business. One of them has men in its organization who do nothing but work. Some of the men work hard and some of them do not, but the latter do nothing else for the organization. The other corporation has at its head a man who does no routine work, but who spends all his time observing and thinking. He keeps posted upon what is going on in his particular industry and what is going on in the world at large. He has time to digest facts and to analyze their bearing upon the situation in which his company is placed. Every minute he knows what his company ought to do next. As each change occurs in the general situation he knows how his individual policy should be modified, so that it is always molded to meet the conditions as far ahead as a keen observer, with ample opportunity to observe, can foresee them.

How many corporations are so conducted? There are many in the steel industry that are not. They are penny-wise and pound foolish. Probably they would regard as a luxury an officer who was not engaged continuously in what they would call real work, in financing, in selling, in planning machinery, of getting work out of those under him.

Practical Course for Sheet Metal Workers

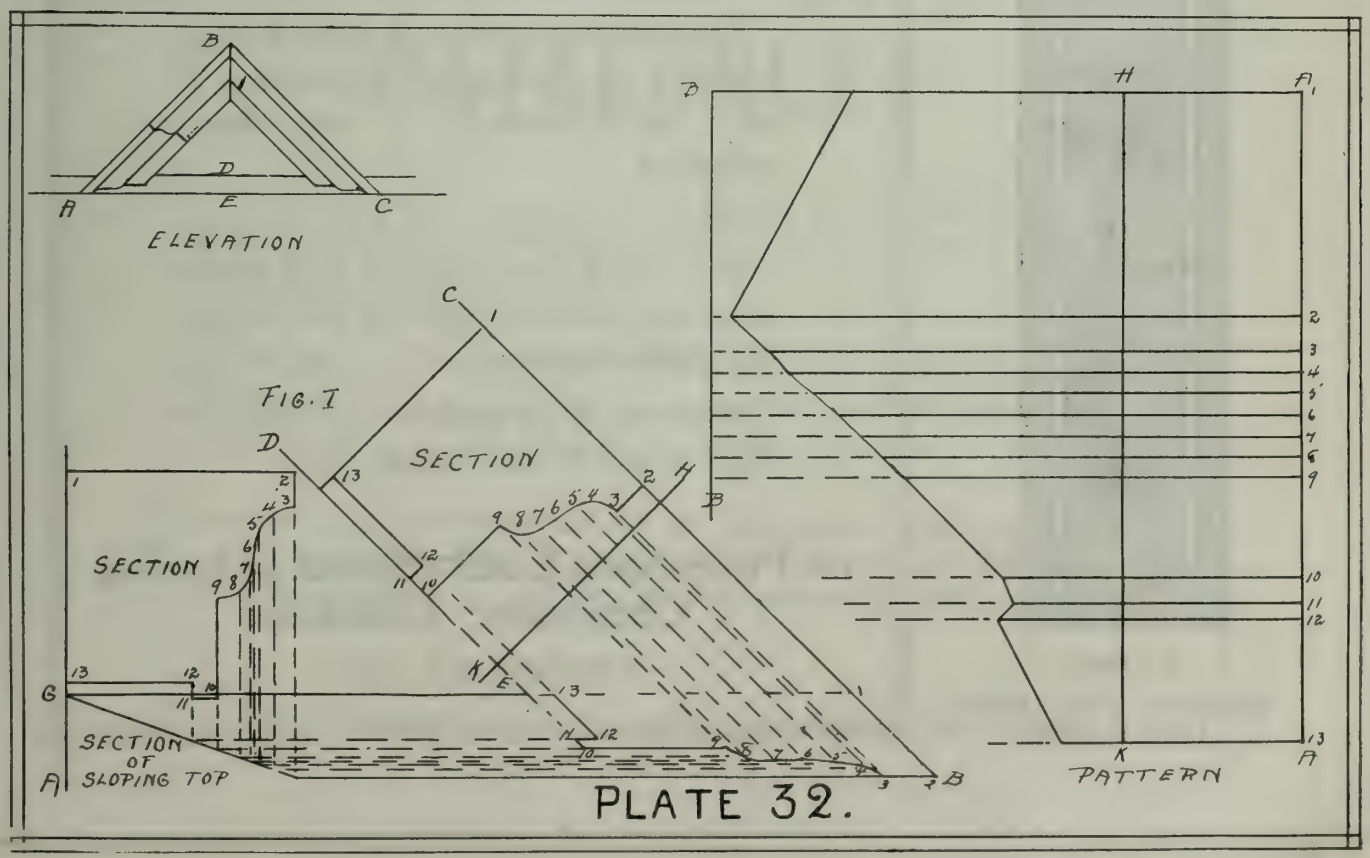
Article No. 32 of Series

By CHARLES SEIVERS

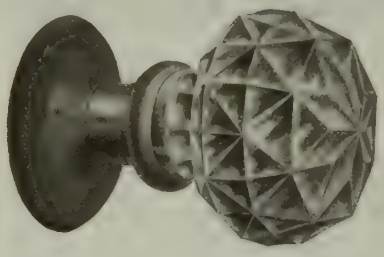
IN this issue is shown a pediment resting on sloping top of cornice. The mitre at peak being described in a previous plate, it is proposed to deal only with mitre resting on raking top of cornice. At elevation, A-B-C represents the pediment resting on sloping corner of cornice as shown by D-E. To draw pattern first, from a line as A-B in Fig. 1, erect an elevation of portion of one side of pediment as shown by B-C-D-E.

In this elevation draw or place a section of moulding as shown by section. Divide the curved mouldings into a number of equal parts and from each angle of the straight members and each division of the curved members draw lines parallel to C-B extending them to the line A-B.

On A-B erect a section of the sloping top on which the pediment is to rest, as shown by A-F-G.



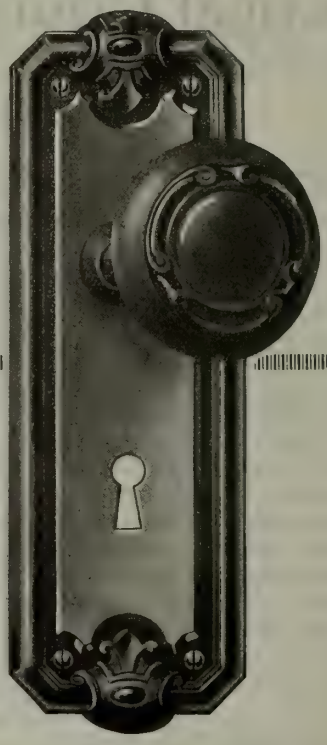
Immediately above the section A-F-G place a section of moulding as shown by section, and divide into parts as on the elevation, draw lines from each angle and division parallel to A-G until they intersect the line F-G. From where each line intersects the line F-G draw lines parallel to A-B until they intersect line drawn from their corresponding points in elevation, that is the line from point 1 on elevation intersected by line from point 1 on section of sloping top, point 2 by line from point 2, etc. A line drawn through the points thus obtained give true mitre line from which pattern is obtained.



The accompanying article is No. 32 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

To lay off pattern draw two stretchout lines and on them lay off the different division on section as shown by 1-2-3-4, etc. Then draw lines joining 1 and 1, 2 and 2, 3 and 3, etc. As a line from which to obtain measurements on elevation draw the line H-K at right angles to B-C and on the stretchout a corresponding line, or one of the stretchout lines may be used to set off measurements from.

With compasses or dividers measure from line H-K, on the line now drawn from point 1, to the intersection of the line 1 and 1, and set off from line H-K on pattern, measure from H-K to intersection of lines 2-2, and set off on line two on pattern, proceed in the same manner with all the remaining lines, until all have been set off on the pattern, a line drawn through these points obtained will give outline of pattern required.



Every retailer gets a lot of advertiseing from people who do business with him. You, of course, want all the profitable publicity you can get, but the sort you receive from dissatisfied customers is not conducive to increased sales, and the less you have of it, the better.

We have spared no expense or efforts in compiling this catalog so as to make it interesting, *easily understood and helpful to the hardware merchant.*

Its simplicity enables you to figure on any job that comes along, no matter how large or small the building, and eliminates all danger of mistakes in specifications.

In addition to our large variety of locks and sets we manufacture a complete line of staple hardware which is fully illustrated in catalogue. All the leading jobbers stock our goods.

Junior Clerk's Page

Personal Power--Your Biggest Asset*

By DR. ORISON SWETT MARDEN.

THE great problem in manufacturing is to get the largest possible results with the least possible expenditure, the least wear and tear of machinery. Men study the economy in their business of getting the maximum return with the minimum expenditure, and yet many of these men who are so shrewd and level-headed in their business pay very little attention to the economy of their personal power expenditure.

There are many people of a high order of ability who do very ordinary work in life, whose careers are most disappointing, simply because they do not keep themselves in a physical and mental condition to do their best thing.

In every place of business we find employees who are only about half awake, half alive; their bodies are full of dead cells, poisoned cells, because of vicious living, vicious thinking, vicious habits. Is it any wonder that they get so little out of life when they put so little into it?

I know men in middle life who are practically where they were when they left school or college. Their enthusiasm has long since petered out; their work has become a drudgery because they have not vim enough to be interested in it. They have not advanced a particle; some have even retrograded, and they cannot understand why they do not get on, why they are not more successful. But everyone who knows them sees the great handicaps of indifference to their health, neglect of their physical needs, dissipation, irregular living, slipshod, slovenly habits, all sorts of things which are keeping them down, handicaps which even intellectual giants could not drag along with them and make any kind of progress.

Everywhere we see young men and women crippled in their careers, plodding along in mediocrity, capable of great things, but doing little things, because they have not vitality enough to push their way and overcome the obstacles in their path.

The author's book is wishy-washy, does not get hold of the reader because he had no vigor, no surplus vitality, to put into it. The book does not arouse because the author was not aroused when he wrote it. It is lifeless because of the writer's low state of vitality.

The clergyman does not get hold of his people because he lacks stamina, force and physical vitality. He is a weakling mentally because he is a weakling physically. The teacher does not arouse or inspire his pupil because he lacks life and enthusiasm himself. His brain and nerves are fagged, his energy exhausted, burned out, his strength depleted, because he has not taken proper care of himself.

Everywhere we see these devitalized people, without spontaneity, buoyancy or enthusiasm in their endeavor. They have no joy in their work. It is merely enforced drudgery, a dreary, monotonous routine. They try to whip themselves to increased effort, but they are not physically equal to it.

These people remind me of a story I heard of an ignorant pedlar and his horse. This man, a fruit vendor, bought an old horse very cheaply at an auction sale. He was delighted with his bargain, but to his dismay very soon found that it was almost impossible to get any speed or work out of the animal. One day, while trying in vain to urge it on, he met a shrewd fellow-vendor, who told him that he had in his cart a magic remedy which would make a young horse out of an old one and a fast horse out of a slow one. All one had to do when his horse began to lag or give out was to apply this remedy, and he would get immediate results. The unsuspecting fellow bought the magic "remedy," which proved to be a whip. For a day or two it worked so well that he said it was worth many times what he had paid for it, because it put new life into his horse, and he could get much more work out of it than he could before. One morning, however, on going to his stable he found the poor old horse dead.

We may laugh at the foolishness and stupidity of this gullible fellow, but there are multitudes of people who are just as foolish, who daily apply the whip to an overworked, poorly nourished, devitalized body. They try to urge on faculties that are robbed of their power by ill-health.

Most of us are at war with ourselves, are our own worst enemies. We expect a great deal off ourselves, yet we do not put ourselves in a condition to achieve great things. We are either too indulgent to our bodies, or we are not indulgent enough. We pamper them, or we neglect them, and it would be hard to tell which mode of treatment produces the worst results. Few people treat their bodies with the same wise care and consideration that they bestow upon a valuable piece of machinery or property of any kind from which they expect large returns.

Personal power is the aim of every sane ambition. We may not think about it in just that way, but whether we are bending all our energies to make money or to write books, to paint pictures or to make machines, to win a position at the bar, or to build up a big business, whatever our immediate ambition, our real aim is to get more power. Whether it comes from money, from business reputation, from fame as physician, lawyer, writer, artist, or what not, power is what we are after, and there is no way of gaining or increasing it so effectively as keeping up all of our standards, physical, mental and moral, by doing everything we possibly can that will increase our self-respect, that will give us more robust health, make us think more clearly and act more efficiently.

Of course, there are isolated examples of people who have succeeded in spite of ill-health, just as there are exceptions to every rule. But the exceptions do not affect the rule, and for the average man or woman success without the physical basis of health is impossible.

One of the first essentials of success is to be a first-class animal. A sound mind in a sound body is a pre-requisite.

New Hardware Goods

Offered Canadian Hardwaremen

THE MAGIC PLUMBER.

Abbot Hardware Co., 636-638 Columbus Avenue, New York, N.Y., offers to the Canadian trade the Magic Plumber, a preparation which it is claimed thaws frozen drain pipes, clears refrigerator drains, dissolves accumulations of lint, cloth, hair, slime, grease, sponge,

The Magic Plumber in Package.

chamois, vegetable matter, cigar and cigarette butts, chewing tobacco and leather in drain pipes.

The makers claim that, in addition to its usefulness for clearing clogged-up waste pipes, it will clean, deodorize and disinfect garbage cans, toilet bowls, urinals, etc.

MARBLE'S R-9 SIGHT.

Marble Arms & Manufacturing Co., Gladstone, Mich., have recently added to the Marble line the R-9—a special

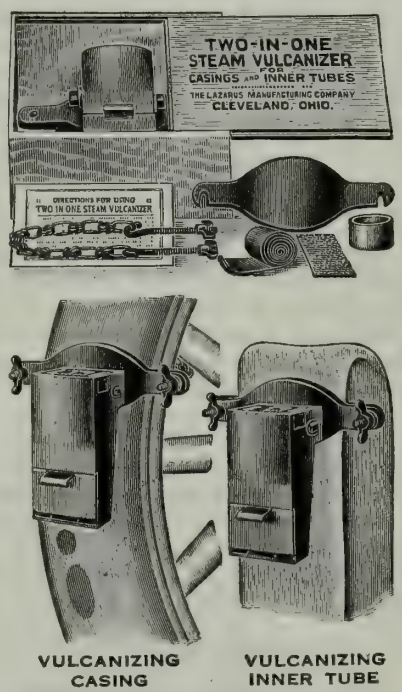
Marbles R-9 Sight.

rear sight for the model 16 Remington .22 Auto Loading Rifle. This sight is designed along the lines of the Marble Flexible Rear Sight. In fact, the R-9 is the same as the Flexible in every detail except that the flexible spring feature is necesarily omitted because the tang holes of the Remington Auto Loader are too close together.

The company has also placed on the market a number of other new lines, including the V-M, or aperture front sight, jointed rifle rods with steel sections, solid rifle rod of steel or brass, and No. 170 auxiliary cartridge to use the 25 Colt automatic pistol cartridge in the new 250/3000 Savage rifle. A new consumers' catalogue (No. 16) has just been issued by the firm. The catalogue consists of 56 pages and contains a large amount of interesting matter regarding Marble's products.

P. S. & W. PRUNING SHEAR.

The Peck, Stow & Wilcox Co., Southington, Conn., are placing on the market a light six-inch pruning shear suitable



P. S. & W. Pruning Shear.

for clipping blossoms or trimming rosebushes, etc. The shear is forged from good quality steel, highly polished. It is made in one size only (six inches), is carefully wrapped in anti-tarnish paper, and packed in neat individual boxes.

TWO-IN-ONE VULCANIZER.

The Lazarus Mfg. Co., Cleveland, Ohio, offers to the Canadian trade the "Two-in-One Vulcanizer." The vulcanizer, is said to be a new invention that has been given a thorough test in the plant of one of the largest tire factories in the world and passed the tests successfully. The makers state that the Two-in-One Vulcanizer is adapted for both casings and inner tubes, making it in reality two machines in one. One of the essential improvements is the enclosed flame that conforms, it is claimed, with insurance regulations, permitting its use with safety in the garage. The vulcanizer has a concave surface designed to fit all size tires. The makers

Two-in-One Vulcanizer.

state that casings can be repaired without deflating and on account of the vulcanizing process being the same as that used in the manufacture of the tire it is impossible to burn or scorch the rubber. The vulcanizer is said to be simple, safe and sure, requiring no gauges or thermometers in its operation. Water is placed in the vulcanizer at the factory and requires no further attention. The directions for using are as follows:—Fill small can, furnished with outfit, to brim with gasoline, pour into vulcanizer cup and ignite. This will heat the water, thereby generating steam to the proper temperature for vulcanizing. When flame has burned out, remove outfit and tire or tube is thoroughly vulcanized. The outfit is put up in a substantial box, that fits tool case and includes chain, hook bolts, thumb nuts, roll of repair gum, measuring can, sand paper and instruction sheet.

Current News

Readers are requested to send in, for publication on this page, news items of interest to the trade.

New Firms

Cornwood, Sask.—Smith & Watt have opened a hardware store.

Mulvey Hill, Man.—A. F. Deruchie is starting a hardware and tinsmith business.

At the Front.

Brantford, Ont.—Word has been received that J. Hawkes died as the result of wounds sustained in fighting near Ypres. Mr. Hawke was for many years identified with the Turnbull & Cutliffe hardware firm of this city.

Business Changes.

St. James, Man.—A. F. Deruchie has moved his tinsmith shop to Mulvey Hill.

Areola, Sask.—W. Patterson, tinsmith and plumber, has been succeeded by Montgomery & Patterson.

Cadogan, Alta.—Block Bros., hardware, have dissolved. J. A. Block continues the business.

Personals.

L. J. Coderre, manager of La Cie Coderre Fils, Inc., Sherbrooke, who had a narrow escape from death when their store was burned down in January, is now well enough to go around, but will not be fit for work for several weeks yet.

Canada's Shell Orders.

According to the shell committee at Ottawa, which has charge of the distribution of orders and the delivery of same to the British War Office, Canadian concerns have already had orders amounting to $154,000,000. The output is growing rapidly, and it is expected that the average daily output will shortly reach 40,000 shells.

Obituary.

Montreal.—M. E. Duncan, vice-president and general manager of the Canada Car & Foundry Company, died at his home in this city from hemorrhage of the brain. He joined the company three years ago. He was born in New York in 1862.

Toronto, Ont.—After an illness from anaemia extending over practically a year, Andrew Muirhead, president of A. Muirhead & Company, Ltd., paints and varnish manufacturers, died on May 25, at his residence, 4 Madison avenue. Mr. Muirhead's illness was first noticed nearly three years ago, but it was only during the last year that it caused him serious trouble.

The late Mr. Muirhead was born of Scotch parentage at Long Point, Quebec, in 1842, and had seen active military service, having fought with the Victoria Rifles, Montreal, during the Fenian Raid. He came to Toronto over 40 years ago, and in 1880 established the business now known as A. Muirhead & Company, Ltd., with head offices at 215 King street east.

Mr. Muirhead was a member of the Board of Trade and the Manufacturers' Association, but took little interest in public life, and never aspired to official positions, though he had opportunities of doing so. His business and home life were his chief interests. Mr. Muirhead is survived by his widow and four daughters.

Montreal.—Robert Munro, for fifteen years managing director of the Canada Paint Co., died at the Royal Victoria Hospital, Montreal, on Friday, May 21. Mr. Munro, who was born in Glasgow seventy-four years ago, came to Canada in 1890 to establish a branch of the Alexander Ferguson Company, of Glasgow, paint manufacturers. This he successfully accomplished, and for seven or eight years remained in full charge. He then formed a company and bought the business, which was operated under the name of the Canada Paint Company, and for about fifteen years remained with the concern as managing director.

Mr. Munro for many years had been a member of the Board of Trade, and was also president of the Canadian Manufacturers' Association. His knowledge of business conditions was highly regarded, and for the last-named body about eight years ago he made a trip to the West Indies with the intention of promoting better trade relations with the Dominion, and his errand was not unsuccessful.

Besides Mrs. Munro, he is survived by Allan Munro, proprietor of the Allan Munro Color Co., and Mrs. Dobson, wife of Rev. J. R. Dobson, pastor of St. Giles Presbertian Church.

Strathroy, Ont.—The death occurred here on May 21, of Richard John Avery, hardware merchant, in his 56th year. When a young man Mr. Avery entered the butcher business with his father, taking possession of the business after the death of his father, which he conducted till December, 1905, when he disposed of the business and entered the Canadian Handle factory as manager. Last fall, owing to his health failing, Mr. Avery had to sever his connection as an active member of the company, and purchased the Wright hardware.

Mr. Avery took a prominent part in municipal life, having served as mayor in 1899 and several years in the council. He also was reeve and served on the county council. He was also a member of this year's Collegiate Institute Board.

Toronto, Ont.—The death occurred here on May 23, of Walter Dowker Beardmore, president Beardmore & Co., tanners and leather merchants. Mr. Beardmore's father established the business from which has developed the large concern known as Beardmore & Co., tanners and leather merchants, one of the largest firms in that business in Canada, embracing houses in Toronto and Montreal and tanneries in Acton West and Bracebridge. Mr. Beardmore took over his father's business at the age of 21 years, and subsequently George W. Beardmore, A. O. Beardmore and F. M. Beardmore were admitted to the firm. Mr. Beardmore was president of Beardmore & Co., a director of the Mutual Life Insurance Association, president of the Dominion Lumber Co., of the Muskoka Leather Co., of the Acton Tanning Co., and of the Beardmore Belting Co. He served as chairman of the Toronto Board of License Commissioners for some years. He was an Anglican, a member of the Toronto Club, Toronto Hunt Club, the York Club, the Ontario Jockey Club, the Ontario Club, the Royal Canadian Yacht Club and the Sports Club, London, Eng. Mr. Beardmore had been ill for some months and his death was not unexpected.

Canadian Manufacturers' Association Organizing.

Toronto, Ont.—The Canadian Manufacturers' Association has organized a half-million dollar company to develop Canada's export trade in manufactured articles and natural products, and application is being made for a federal charter for a company to be organized with an authorized capital of a half-million dollars. The company will be known as the Export Association of Canada, Ltd., and

the head office will probably be in Montreal. It is also intended to open an office in London, Eng.

The object of the Export Association of Canada, Limited, is to provide an organization to secure for Canada a new and larger portion of the world's trade under the changed conditions brought about by the war, and to develop and carry on the export trade in Canadian products upon national co-operative lines.

Assurances have been given of co-operation by the Dominion Government, the railways and large manufacturing interests for the proposed organization. Provisional directors have been named and managers appointed.

The provisional directors appointed are: J. H. A. Acer, Laurentide Co., Ltd., Montreal; G. F. Benson, Edwardsburg Starch Co., Ltd., Montreal; C. N. Candee, Gutta Percha & Rubber, Limited, Toronto; G. H. Duggan, Dominion Bridge Co., Ltd., Montreal; H. L. Frost, Frost Wire Fence Co., Ltd., Hamilton, Ont.; C. B. Gordon, Dominion Textile Co., Ltd., Montreal; R. H. McMaster, Steel Company of Canada, Ltd., Montreal; W. W. Near, Page-Hersey Iron Tube & Lead Co., Ltd., Toronto; J. H. Sherrard, Alaska Feather & Down Co., Ltd., Montreal; A. W. Wheatley, Canadian Locomotive Co., Ltd., Kingston, Ont.

The provisional directors have arranged to secure the services of F. C. Armstrong, of London, England, and R. J. Younge, of Montreal, to organize the association, and afterwards for the first year of operations to act as joint general managers.

PERSONAL POWER.

(Continued from page 42.)

Vigorous, abounding health is a duty as well as a necessity.

It is everyone's sacred duty to keep himself up to the highest possible standard, physically and mentally, otherwise he cannot deliver the divine message entrusted to him by his Creator in its entirety to the world. It is everyone's sacred duty to keep himself in a condition to do the biggest thing possible to him. It is a positive sin to keep oneself in a depleted, run-down, exhausted state, so that he cannot answer his life call or any big demand that an emergency may make upon him.

To be confronted by a great opportunity of which you are powerless to take advantage, because you have let your energy leak away in useless, vicious ways, or to feel that you can only take hold of your great chance tremblingly, weakly, with doubt instead of assurance and a consciousness of vigor, is one of the most disheartening experiences that can ever come to a human being.

If you would make the most of yourself, cut away all of your vitality sappers, get rid of everything which hampers you and holds you back, everything which wastes your energy, cuts down your working capital. Get freedom at any cost. Do not drag about with you a body that is half dead through vicious habits, which sap your vitality and drain off your life forces. Do not do anything or touch anything which will lower your vitality or lessen your chances of advancement. Always ask yourself: "What is there in this thing I am going to do which will add to my life-work, increase my power, keep me in superb condition to do the best thing possible to me?"

If we would only study the needs of our bodies as we study the needs of the plants in our gardens, and give them the proper amount and variety of food, with plenty of water, fresh air and sunshine, we would not be troubled with disordered stomachs, indigestion, biliousness, headache, or any other kind of pain or ache.

If we used common sense in our diet, lived a plain, sane, simple life, we would never need to take medicine. But the way many of us live is a crime against nature, against manhood, against our possibilities.

Take the treatment of the digestive apparatus, for instance, which really supplies the motor power for the whole body, and we will find that most of us do not give it half a chance to do its work properly. The energy of the digestive organs of many people is exhausted in trying to take care of superfluous food for which there is absolutely no demand in the system. So much energy is used up trying to assimilate surplus, unnecessary food, improper food, that there is none left to assimilate and digest that which is actually needed.

Men are constantly violating the laws of health, eating all sorts of incompatible, indigestible foods, often when the stomach is exhausted and unable to take care of simple food. They fill it with a great variety of rich indigestible stuffs, retard the digestive processes with harmful drinks, then wonder why they are unfit for work, and resort to all sorts of stimulants and drugs to overcome the bad effects of their greediness and foolishness.

Many go to the other extreme and do not take enough food or get enough variety in what they do eat, so that some of their tissues are in a chronic condition of semi-starvation.

The result is that while there is a great surplus of certain elements in some parts of the system, there is a famine of different kinds of elements in other parts of the system. This inequality, disproportion, tends to abnormal appetites that often lead to drinking or other dissipation. Many people resort to dangerous drugs in their effort to satisfy the craving of the starved cells in the various tissues when what they really need is nourishing food.

There are only twelve different kinds of tissues in the body and their needs are very simple. For instance, almost every demand in the entire system can be satisfied by milk and eggs, though, of course, a more varied diet is desirable, and should always be adjusted to suit one's vocation and activities. Yet, notwithstanding the simple demands of nature, how complicated our living has become!

The great thing in life is efficiency. If you amount to anything in the world, your time is valuable, your energy precious. They are your success capital and you cannot afford to throw them away or trifle with them.

Whatever else you do, husband your strength, save your vitality, hang on to it with the determination with which a drowning man seizes and clings to a bit of log at sea. Store up every bit of your physical force, for it is your achievement material, your manhood timber. The man who has no money is rich compared with the man who has squandered his vitality, thrown away his precious life energy. Gold is but dross compared with this, diamonds but rubbish, houses and lands are contemptible beside it.

Dissipators of precious vitality are the wickedest kind of spendthrifts; they are worse than money spendthrifts; they are suicides, for they are killing their great chance in life, their power to be strong, vital efficient men and women. They are squandering their biggest success asset.

WE ARE LOOKING FOR A GOOD MAN.

We have an opening on the editorial staff of Hardware and Metal which offers splendid prospects for the right kind of a man. If you have a good knowledge of English composition, are experienced in selling, have a knowledge of advertising, and know the hardware trade, we would like to hear from you. When applying, give definite particulars of present employment, age, experience, and salary required. Kindly apply by letter only. All applications will be treated confidentially.

Address: Hardware and Metal, 143-153 *University Ave., Toronto.*

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

The business outlook in the rural districts is bright and crop conditions continue favorable. Some lines of summer goods, such as refrigerators, ice cream freezers, etc., have not been moving as freely as is usual at this season of the year. This is due to the recent cool and unseasonable weather. The metal markets are still unsettled. Spelter has taken another big jump in price, and present quotations are very much higher than any previous price on record. Stocks of spelter are very low and many manufacturers have been inconvenienced as a result of the scarcity and the prevailing high prices. Copper is in heavy demand. Lead remains firm, and higher prices are predicted. It is remarkable that, despite the unheard-of prices of many other metals, lead is only about ¼c per pound higher than the price in effect before the outbreak of the war. Western Canada reports indicate a better feeling in the West, and although buying is still conducted on a conservative basis, there is a general improvement noticeable.

MONTREAL.

MONTREAL, May 27.—The week has shown little change in the hardware trade. Cold, backward weather has had the effect of curtailing the demand for some of the seasonable lines, but for the most part country buying continues in good volume, and the city store trade shows continued improvement so far as general lines are concerned. Big business continues very dull, particularly with regard to building materials. The metal markets have become very active again, and spelter has been making some new price records, with lead also getting attention. Metal products generally are strong, with prospects of further price changes. Rains have interfered with demand for hose and sprinklers, and freezers have been rather slow; June cutlery is in fair demand, but there is a difficulty in getting supplies.

The Metals.—The metals have had another week of activity, with spelter as the leading feature. Spelter has recently broken all bounds, with the result that last advance in products are likely to be followed by others almost immediately. Lead has been advanced 25c, following a change in the Trust quotation in the States. Tin continues rather easy and copper firm, while zinc is soaring to new levels. Necessarily, metal products of all kinds are being affected by the conditions referred to, and the markets are strong and unsettled.

Tin.—The market continues fairly easy, and the price has been brought down about 2c to 48c and 49c. New York reports that some slight interest has been injected into a dull market there by the entry of Italy into the war, which created a better feeling in all lines of trade in England—especially speculative circles—and advances have been recorded there. New York believes that if speculation abroad becomes active, increases are likely to be quickly recorded, as tin is regarded as being on a comparatively low level, considering the conditions prevailing. Against this is the quiet state of the market in the States, where there appears to be plenty of supplies in sight.

Copper.—Locally copper is holding very strong on the 21c level. New York quotes a fraction off from last week at 18½c, but recently the tone there has been very strong, based on the general improvement in trade circles in England following the entry of Italy into the war. Further advances in copper products in general are anticipated, the increases thus far not having overtaken the market for raw material.

Spelter.—A further advance of about 3c in the spelter quotations here gives some idea of what that metal has been doing. The price is now 21c to 21¼c, and there are indications that the level may be raised. New York reports that buyers have gone crazy, and that they seem willing to pay almost any price for delivery before the end of the year. Sense of values has seemingly been lost, and there appears to be no appreciation of the cost of manufactured products on the present basis of the raw material. Further changes in the prices for all products are in order, and galvanized sheets are expected to advance in the course of a few days. A New York authority comments that there is bound to be a reckoning one of these days for the extravagant price that spelter has been pushed up to, but "we have not the slightest idea when that will be—and there will be a different tale to tell then than there is now." The advance in New York over the week is 3¾c.

Solder.—In sympathy with the easier market for tin, there is a shading off in the quotations for solder, but the situation is so unsettled in relation to manufacturing costs and stocks on hand that there is a considerable spread in the prices ruling. Half-and-half is spreading between 25c and 29c, and strictly between 28c and 32c, with the tendency towards the lower figures.

Lead.—An advance of ¼c in the lead market comes with a rise of $2 the ton quoted by the American Trust—and the opinion of those close to the situation is that there will be further changes in an upward direction. The higher values seem to be due to the fact that there has lately developed a demand for lead to take the place of spelter in producing a coated sheet; however, the success of the movement cannot as yet be decided. In any event, it is being realized that lead has been held at comparatively low valuation.

Antimony.—There is little more to be

MONTREAL QUOTATIONS.

Tin	48c-49c
Spelter	21c-21¼c
Copper	21c
Lead	6c-6¼c
Antimony	35c
Solder, ½ x ½	25c-29c
Solder "strictly"	28 to 32
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

said regarding antimony. Prices are nominal, and where there are stocks holders can ask about what they like. Supplies of English manufacture have practically disappeared, and there are no new shipments coming, while there is no definite assurance as to imports from the East.

Zinc.—Last week's prediction as to further advances in the prices for sheet zinc has been followed by a market that is completely upset. As compared with 18½c and 19c the figures now heard are 23c to 25c.

Sheets and Plates.—The rapid advances in the price of spelter already warrant higher quotations for galvanized sheets and plates than those adopted a week ago, and these higher prices are likely to go into effect at any time. In connection with the last advance the prices for Fleur de Lis should read: 16-20, $4.05; 22-24, $4.30; 26, $4.55, and 28, $4.80.

Iron and Lead Pipe.—In connection with the last advances in the prices for black and galvanized pipe, the following quotations adopted in Montreal represent a higher range than the minimum and apply to small business:

Per 100 feet.	Black.	Galvanized.
¼ and ⅜ in. ..	$2.39	$3.54
½ in.	2.86	4.21
¾ in.	3.27	5.08
1 in.	4.83	7.52
1¼ in.	6.54	10.17
1½ in.	7.82	12.16
2 in.	10.53	16.36
2½ in.	16.63	25.86
3 in.	21.75	33.82
3½ in.	26.14	40.67
4 in.	30.98	48.19

Owing to the higher prices prevailing for spelter higher charges for galvanized pipe may be expected.

With the advance in the lead market the quotations for lead pipe are very firm. The demand is only fair. Prices are 8c for lead pipe and 9c for lead waste pipe, strictly net.

Bar Iron and Steel.—The market for bar iron is a trifle easier for big business, and, while the base continues at $2, $1.95 is heard for car orders.

Copper Rivets.—The recent advance in the price of copper rivets is likely to be followed by still higher values as the result of the continuance of the high cost of copper.

Screws and Bolts.—There is reported to be a little better demand for bolts for general trade, and screws are very firm in sympathy with the metal markets.

Rope. — The rope market is very firm, and, with the advancing costs for raw materials, higher prices are likely to be brought about in a general change, with the probability that binder twine will also be affected. Demand is fair, with some improvement being noted in Western Canada.

Oakum.—The oakum market is easier, with values declining somewhat. One house quotes $3.60 as compared with $3.75.

Nails, Fencing, etc.—The demand for nails and fencing is only fair, the former being affected by heavy deliveries prior to the last advance, while shipments of the latter are practically over. Poultry netting is still moving very well.

Builders' Hardware and Materials.—The situation as regards builders' hardware and materials shows very little change from the dullness which has prevailed for some time. New lists are still being awaited as to prices on builders' hardware; one new catalogue has been received, but the discounts are not complete.

Cutlery.—There is a fair demand for cutlery for the spring wedding business, but there is a difficulty in getting supplies from the Old Country, and this is proving a considerable handicap.

Utensils. — With copper remaining firm and spelter advancing rapidly, the market for utensils manufactured from these metals is very strong, and for galvanized ware in particular further advances in prices are to be expected.

Stoves.—A reluctance to place orders continues in the stove business, and this makes the season a very late one. However, there is a chance that the buying is being deferred until the last moment, as in most branches of retail trade.

Seasonable Lines.—Movement of harvest tools is brisker, and there is a fair call for garden and lawn tools, although the plentiful rains have had the effect of deferring interest in hose and sprinklers.

Tees and Straps.—Advances have been made for tees and straps, "heavy" now being quoted 40 per cent. as compared with 40 and 10 per cent., and "light" 65 and 5 per cent. off, as compared with 70 per cent.

TORONTO QUOTATIONS.

Tin	42c
Copper	21c
Spelter	22c

TORONTO

TORONTO, Ont. May 27.—The volume of trade continues at about the same level and conditions generally show little change. The outlook in rural districts is bright and crop conditions continue to be favorable which is having a beneficial effect on business generally. Seasonable lines such as refrigerators and ice cream freezers have been quieter during the spell of cooler weather but a nice business is reported in gas ranges and oil stoves; other branches of the stove business are dull. There is a good demand for garden and harvest tools, and allied goods. Shelf lines are moving out fairly well with steady demand.

Galvanized sheets are quiet but firm at the advance reported last week. The spelter situation is becoming more serious and the market is advancing. If this continues, and it most probably will, prices on all galvanized products are bound to advance. At present the market for these lines is unsettled and there is little hope of any improvement in the situation while the war lasts. The entry of Italy into the war as a belligerent has affected the rope market and the situation as regards raw materials has become more serious. It is highly probable that prices of Italian hemp rope will be advanced shortly. The building trade is dull, but a better demand is reported for builders' hardware and supplies. An advance in prices of double-filled cotton duck is announced due to high cost of raw materials.

Metals.—The feature of the metal markets this week is the continued upward movement of spelter which has reached an unprecedented figure. The tin market is weak and quotations a little lower. Copper is quiet notwithstanding the heavy demand as is also antimony. The aluminium market after a long period of quietness is showing some animation. There is nothing new of interest to report in the lead market. The local demand for metals for munitions continues brisk but ordinary business is quiet. The London Metal Market was closed on Monday for the Whitsuntide holiday.

Tin.—The London Market has recently been rather more active and firmer but the New York market is quiet. The market is comparatively steady and speculation has to a large extent been eliminated. Tin has declined 1c locally and is quoted at 42c per pound.

Copper.—The copper market at New York is quiet and unchanged but producers report better export and domestic

inquiry. Local quotations are firm and unchanged at 21c per pound.

Spelter.—The market continues to advance on heavy demand and there appears to be little probability of any relief from the high prices for some months. There is still a good demand from consumers who are inquiring for deliveries up to the end of the year but there is a difficulty in buying. The galvanizing interests are in a bad position and the situation is serious. Heavy buying of spelter for war materials is reported in which case high prices do not matter so much. Local quotations have advanced 5c, and spelter is selling locally at 22c per pound.

Lead.—The market is quiet but firm. Lead is the only metal that has not advanced heavily since the war began and it is possible that higher prices yet may be seen. Quotations are unchanged at 5¾c per pound.

Antimony.—The situation is unchanged and with urgent demand for early and forward deliveries the market continues strong. Quotations are unchanged and nominal at 40c per pound.

Aluminium.—The market is very unsettled and prices in New York show a variance of several cents per pound. Importers in the States are well sold ahead and there is little foreign aluminium offered for earlier than August. Local quotations are unchanged at 23½c per pound.

Solders.—With the continued weakness in the tin market, lower prices for solders are possible as consumption is light. Prices are given in panel and also in the current market quotations.

Bar Iron and Steel. — There is no change in the situation as regards merchant bars but prices are holding firm at $2.05 base. The most interesting feature in the steel trade now is the heavy demand for steel for shells. The demand continues to increase and the tonnage is assuming considerably proportions.

Pig Iron.—The market is dull and uninteresting. Prices are unchanged, Hamilton and Victoria brands being quoted at $19 per ton.

Wire Nails.—Business continues at about the same volume with a firm market. Wire nails are quoted at $2.35 base and cut nails at $2.70 base.

Iron and Lead Pipe.—The advance in prices of wrought-iron pipe is holding firm. Prices are given in the current market quotations. Lead pipe is firm at 8c and waste pipe at 9c. There is little improvement in business to report in these lines.

Galvanized Sheets. — The market is strong and the new prices announced last week are being maintained. The trade is very unsettled due to the spelter situation, supplies of metal being scarce and prices very high. Under present conditions it is difficult to gauge the market but the tendency is certainly for higher prices unless the situation improves considerably in the near future.

Rope.—With Italy now engaged in war, supplies of Italian hemp will be very difficult to obtain. A similar situation has of course existed with regard to Russia for some time. The sisal situation is unchanged and high freight rates have increased the cost of manila. The market is unsettled and viewed from every standpoint the outlook is serious. An advance in price of Russian and Italian hemp rope may be announced any time. Prices of rope and twine are very firm and are given in the current market quotations.

Cotton Duck.—Owing to the increased cost of raw materials prices of cotton duck, double filled, have been advanced, single filled lines are unchanged. The new prices are as follows:—7 oz. 16¾c; 8 oz. 18½c; 9 oz. 20¾c; 10 oz. 23c; 12 oz. 27¾c; 15 oz. 34½c per pound. The advance ranges from 1c to 5½c per pound according to weight.

Utensils and Stoves.—Gas ranges and oil stoves are moving out well but other lines are quiet. There is a fair demand for most lines of ware and prices are very firm.

WINNIPEG QUOTATIONS.

Canada Plates:	
Half Polished, 6-7 inch	$3.80
Full Polished, 6-7 inch	4.95
Solder	29c-30c lb.

LONDON

LONDON, Ont., May 25, 1915.—Business continues fair and seasonable lines are moving in a satisfactory manner. Collections are good. Turpentine has declined 5 cents per gallon. With the exception of putty, all other lines remain unchanged.

Oil Turpentine, etc.

A decline of 5 cents per gallon has taken place on turpentine and quotations are now as follows:—Single barrels 68c per Imperial gallon; 2 to 4 barrel lots 67c per Imperial gallon; 5 gallon lots 75c per Imperial gallon.

Raw Linseed—

Linseed oil is quoted as follows:

Raw Linseed—

1 to 2 barrels	82c	per	gallon,
3 to 5 "	81c	"	"
6 to 9 "	79c	"	"
Boiled—			
1 to 2 "	85c	"	"
3 to 5 "	84c	"	"
6 to 9 "	83c	"	"

Garden Tools, etc.—Sales of garden and lawn tools so far have been very satisfactory, although the cool weather of the last few days has had a tendency to temporarily stop the demand. Harvest tools are quoted at 40-12½ per cent; net prices on snaths are: No. 3, $7.35 dozen; No. 2, $7.70 dozen; No. 1, $8.40 dozen.

Wire Nails, etc. — Wire nails are quoted at $2.35 base, and cut nails at $2.70 base. Poultry netting is in fair demand at 45 per cent. off list; painted screen wire is selling well in 100-ft. rolls at $1.55 per 100 sq. ft., and at $1.60 per 100 sq. ft. in 50-ft. rolls; plain galvanized No. 9 wire remains at $2.30 per 100 lbs.; while No. 9 coil spring is quoted at $2.35. Barb wire is selling at $2.55 per 100 lbs.

WINNIPEG

WINNIPEG, May 27.—While no one is in a better position to know the state of the crops in one immediate district then is the retail hardwareman, yet no one is better aware than he that it is the general condition of the crops all over the West which indicates the amount of business which may be expected a little later on, and the condition of trade which may be expected for months after the crop is harvested.

The word of a large Winnipeg grain man, therefore, will be of great interest to all connected with the hardware trade. This man states that if the weather had been hand picked it could not to date have been much better than that which has been experienced. He states that as far as his firm has been able to learn there is only one district

which reports insufficient rain—this is one district north of Calgary. He says the cold weather coming after the rains was exactly what is required. It made growth slow, resulting in the plant taking a firmer root, which will enable it to withstand adverse weather conditions should such arise a little later on.

Still another grain man is even more enthusiastic, making the bold prediction that the West is this year going to see a crop of 300,000,000 bushels. More conservative men do not regard this estimate as one which is reasonably sure of fulfilment. The general opinion, however, is that the crop has secured a better start in every respect than for years past.

Improvement in Business.

Already the better feeling resulting from good crop conditions is having its effect on trade. Buying is getting more free. Farmers are getting to town and making purchases of the hardwaremen. The hardwaremen, therefore, is required to place further orders with the wholesalers. He is still ordering on a conservative basis.

Plannished Copper Up.

During the week a number of price changes have been struck. Following the general advance in copper, plannished copper has risen 3c being now quoted at 40c per lb.

Iron pipe both galvanized and black has risen materially, due to higher cost of material. The new quotations are:—

GALVANIZED IRON PIPE.

¼ inch, $4.05; ⅜, $4.15; ½, $4.95; ¾, $6.30; 1 inch, $9.00; 1¼, $12.15; 1½, $14.40; 2, $19.45; 2½ inch, $30.60; 3 inch, $40.50.

IRON PIPE.

Black, ¼ inch, $2.70; ⅜ inch, $2.80; ½ inch, $3.50; ¾ inch, $4.05; 1 inch, $5.95; 1¼ inch, $8.10; 2 inch, $12.95; 2½ inch, $20.70; 3 inch, $27.00; 3½ inch, $32.40; 4 inch, $38.70; 4½ inch, $47.70; 5 inch, $55.00; 6 inch, $72.00.

More Poultry Prices.

Further changes in Banner Poultry Netting have been struck, this now being quoted for 10 rod rolls at the following prices:—

24 inch	$2.50
36 inch	2.90
48 inch	3.60
60 inch	4.20
72 inch	5.10
84 inch	6.00

Almost without explanation seems a drop which has come in the price of solder. Spelter is still scarce, yet this product is now being quoted at 29 to 30 cents in place of the old 32 to 33 cents.

New prices have been struck for galvanized iron, these figures now being:—

IRON, GALVANIZED.

	Appolo and "Fleur de Lis."	"Queen's Head."
10¾ oz. or 28 Eng.	5 50	5 75
28 Am. or 26 Eng.	5 25	5 50
26 Am. or 26 special	5 00	5 25
24 Am. and Eng.	4 60	4 85
22 Am. and Eng.	4 60	4 85
18 and 20 Am. and Eng.	4 50	4 75
16 Am. and Eng.	4 35	4 60

No changes whatever are made in the price of paint lines. Business in these goods, however, is reported quite satisfactory. Here evidently the increased optimism as a result of good crop conditions is having a very encouraging effect. From the country the orders are perhaps better than in past years, and from the city too there has been an improvement, though it cannot be said the demand is up to that of other seasons.

FINANCE MINISTER ONCE A MERCHANT.

Edward Brown Holds Important Post in the New Manitoba Cabinet.

(From The Financial Post.)

MANITOBA'S new administration has before it a splendid opportunity. Assuming that the financial position of the Province is not as good as it ought to be and that reports with respect to it are accurate, the situation presents to the new administration an excellent opportunity of immediately earning the confidence of the investing and business public. In the opinion of The Financial Post, the wealth of that Province and its ability to take care of all its obligations, if its affairs are reasonably well administered, is unquestionable. Of course, if expenditures are to be continued on the same scale as during the years of expansion trouble will result. The responsibility of indicating how the current resources of the province can be handled so as to take care of current obligations rests with the Minister of Finance, Mr. Edward Brown. He has had an exceptionally good training for the position. He first came into the public eye through his success as a merchant, and subsequently gave attention to land and finance. Invariably he has been successful.

Mr. Brown's first duty as Provincial Treasurer in Manitoba will be to cut down the expense of administration without impairing its efficiency. We have no doubt but that this can be done. He has started out in practical fashion by appointing a reputable firm of auditors to report to him upon conditions as they exist. Hitherto, we believe, it has been the practice to hand this work over to some political hanger-on. When the report is available, Mr. Brown will be able to do exactly as other large undertakings in the Dominion have done and that is to cut down expenses. Our railway systems have done so drastically as have many undertakings not so much in the public eye. It is only by this rigid economy that the expense of maintaining our men at the front can be borne and only by such measures can we take care of our current obligations. We have no hesitation in prophesying embarrassment to any government or any financial or industrial undertaking of more than local importance that does not at the present juncture pursue a policy of the strictest economy. Politicians are strongly tempted to be liberal with public money. That tendency is at present too evident in the case of many Governments in the Dominion and also many municipalities. We trust that the new administration in Manitoba will strike new and desirable ground by giving the Dominion an example of economy and efficiency.

ADVERTISEMENTS—GOOD AND OTHERWISE.

(Continued from page 33.)

commodities. What would suffice for one product would be out of place if used for another.

A sense of proportion, and the possession of tact, are prime essentials in the production of "atmospheric" advertising.

Accompanying this article there are thre reproductions of recent advertisements by retail hardware firms. Each advertisement has a decidedly hardware "atmosphere." The ad. of the MacPhail-Smith Hardware Co., Nanaimo, B.C., is a well set-up and interesting advertisement giving illustrative descriptions and prices of a good selection of seasonable hardware lines. The electros used in the ad. were selected from Hardware and Metal's electro assortment.

The Mills Hardware Co., Hamilton, Ont., advertisement is also an attractive and very seasonable advertisement that should prove a strong business puller. The cuts are good, the reading matter appropriate, and one of the most commendable features is the quoting of prices.

The third advertisement, that of D. Hall, Sutherland, also shows how cuts can be used to give an advertisement a hardware atmosphere. The goods featured in this advertisement are also seasonable.

When available, cuts showing the goods in actual use are always desirable, but be sure and have illustrations that are appropriate and up-to-date.

Iver Johnson Booklet.

Iver Johnson Arms and Cycle Works, Fitchburg, Mass., has issued a neat little booklet, entitled "Facts Leading Back to the Bicycle." Many illustrations of Iver Johnson bicycles are shown in the booklet, along with interesting reading matter pertaining to the bicycle and its uses.

Paint Department

Retailers Using Circulars

Many Retailers Make Use of the Co-operation Offered by Manufacturers—One Merchant's Experience With a Selected List—Circular Sent Out by Montreal Merchant.

IN last week's issue of Hardware and Metal a statement was made to the effect that more advertisements, by retail hardwaremen, featuring paints and varnishes had appeared in newspapers during the past few weeks than in the corresponding period of any past years. Several reasons for this were given last week.

There is another feature of the paint selling campaign this year worthy of special mention, and that is the use that has been made of circulars of various kinds. Clean-up and paint-up campaigns have been carried on in a number of towns and cities during the past few weeks. These campaigns have had a splendid effect in stirring up the interest of the public in the value of paint and they have also been the cause of stirring up a great many retailers and encouraging them to push the sale of paint more aggressively than usual. In the city of Montreal the clean-up and paint-up campaign this year met with considerable success. One paint manufacturer who took an active part in assisting retailers in the campaign stated to Hardware and Metal that a great many Montreal dealers in paints and varnishes and clean-up lines, used extra advertising space in the city newspapers and some dealers got out special dodgers for house to house distribution in the district where their stores are located.

During clean-up week nearly all the hardware windows were dressed for the occasion with paints and varnishes and a general line of cleaning tools. Now, the circulars used this year have been as, in former years of two classes—those prepared and distributed by the retail merchant himself and those supplied by the manufacturer through the service or promotion department. Many merchants have made use of the latter, in fact the merchant who does not make good use of the co-operation offered by the manufacturer is passing-up one of the best things available for assisting the retailer to get new customers and last but not least—profits. One merchant in speaking to the writer, stated that the paint manufacturer whose line the merchant carries offered to send out a certain number of circulars if the merchant would supply the mailing list. Instead of hurriedly making up a list the merchant took his time and carefully selected all the names on the list taking care to omit all undesirables. The list was made to include a fair number of people who dealt at opposition stores. The list was sent to the manufacturer and in a surprisingly short space of time the circulars were sent out and the merchant began to receive many enquiries. Some enquiries came in almost immediately after the distribution of the circular while others did not come in for three or four weeks. The same list was used a little later on by the merchant to send a circular which he had printed himself and which featured paint, hardware, clean-up goods, etc. The average manufacturer is always glad to co-operate with and assist the retailer in circularizing prospective customers.

In some cities and towns where clean-up and paint-up campaigns have been held the merchants have issued special circulars or dodgers dealing with the clean-up movement. Fabien, Limited, Montreal, who advertised themselves as "The hardware store that guarantees satisfaction," during the Montreal campaign distributed a circular in the district in which they are located. The dodger measured 12 x 16 inches and read as follows:—

"Clean-up and Paint-up Week. Are you going to paint this spring? Does your house look shabby alongside your neighbors'? Does it look neglected? Is this the way you are going to leave it for another year?

"Your house may be larger and better than your neighbors' but it does not look so well, nor will it stand the weather and test of time so well without the necessary coat of paint. A small investment in paint will prove a money saver and you owe it to yourself.

"The interior as well may need brightening up, or possibly your tables or chairs need a coat of varnish stain. Blank's make a paint for every purpose. Come in and talk over your paint troubles."

The foregoing was followed by several verses of appropriate poetry.

Some of the circulars sent out by retailers this spring have been very ordinary indeed, while others have been attractive and have been right to the point—giving prospective customers a good talk on the desirability of using good ready mixed paint.

PLACING ORDERS IN U. S.

Cleveland, Ohio.—The Iron Trade Review says: The actual placing of orders for 14,900 cars by the Pennsylvania lines has furnished positive evidence that recent announcements concerning the buying programme of these lines are well founded in spite of rumors that the orders were to be indefinitely postponed. The Pennsylvania has also placed orders for 75 locomotives, and 1,000 automobile cars are pending. Russian car orders to the number of at least 1,000 are still pending.

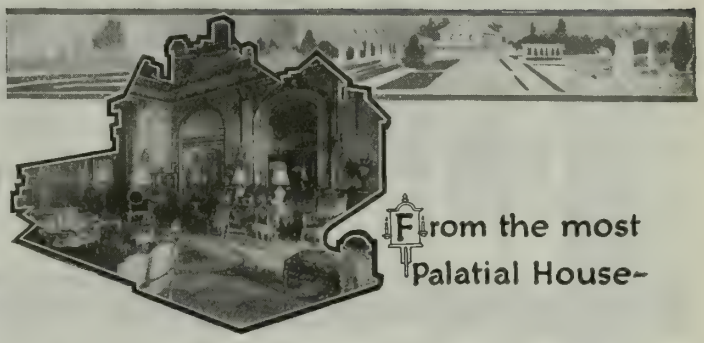
The steel bar situation is very strong. This is due in part to the heavy orders for bars for shrapnel recently placed, but the demand for purely dometic purposes is very fair, and prices are being well maintained.

Owing to the very high price of spelter, the minimum quoted on No. 28 galvanized sheets is now $3.60, Pittsburgh.

It is no credit to any one to make a failure, whether it be in business or otherwise. To make the most of ourselves is a duty that each one owes to himself. No one is doing his best when he is running his business by guess, and you are running your business by guess if you don't know what it costs you to do business.

POSSIBILITIES THIS SUMMER with the Ingersoll Dollar Watch

Hardware stores are patronized regularly by every man and boy in your community, and very frequently by the girls and women. These people are all logical watch users.



With Summer at hand with its knockabout outdoor life,—Camp Life, Hunting and Outdoor Sports,—the Ingersoll combination of Accuracy, Durability and Economy is just what is wanted in a watch. The Ingersoll watch withstands this usage better than an expensive watch, and if it should break down or get lost, the loss is trivial.

Your customers are well acquainted with the Ingersoll Dollar watch. The name "Ingersoll" on the dial means to them "a reliable, guaranteed timekeeper at a very low cost." They know that an Ingersoll is the same serviceable watch regardless of where sold. The hardware store is as good a place to buy one as the jewelry store.

It only remains for you to show the watch with "Ingersoll" on the dial in one of our showcases. Remind your trade that they need an Ingersoll.

If your stock on them is low, now is the time to write your jobber, or us, for a special assortment.

200 McGill Street Montreal, P. Q.

For Every Finishing Need in the Modest Cottage or the Most Pretentious Home or Skyscraper—There is a Perfect Berry Brothers Varnish.

In selling varnishes to your trade—no matter the class or size of the job—do not lose sight of this important fact:

For 57 years Berry Brothers' products have been the choice of home owners, architects, builders, painters and decorators—because of sheer merit.

By selling Berry Brothers' Varnishes—you are promoting the best interests of your customer as well as your own. Among the most widely used Berry architectural finishes and the ones you should sell the most of are these two sterling products:

LUXEBERRY WHITE ENAMEL

Used on woodwork, metal or plaster it gives a beautiful rich, durable and washable finish — whitest white that stays white. It will not check, fade or turn yellow.

LIQUID GRANITE FLOOR VARNISH

A perfect floor finish as lasting as its name implies. It produces a tough elastic surface of surpassing beauty. It will not wear white, check or peel under the hardest kind of hard wear and tear.

Sell your trade a varnish that has proven itself by years of actual service—a varnish that sells on its own merit. Write for dealer proposition.

Weekly Paint Markets

MONTREAL

MONTREAL, May 27.—Business continues brisk and movement to country points satisfactory, despite the fact that backward weather has continued to take the edge off the demand. Price changes have not been many although there are continual adjustments being made throughout the miscellaneous lines where imported colors and chemicals are cost factors. Putty has been advanced 10c on the higher values for whiting and lead is very firm with an advance of 25c in the metal trade. Turpentine shows a considerable decline, although this has not as yet had a general effect in the trade. The broad spread in the oil market still prevails as between new products and old stocks.

Linseed oil.—The market continues in the unsettled state which has prevailed for some time, and this condition—with its attendant wide spread in quotations, promises to continue until stocks of cheap oil have been exhausted, unless the trade comes together on the question of values. The "bulls" take the stand that while low quotations prevail there are no stocks to be bought at these prices, while the "bears" claim that they are charging sufficient to cover the market. The following figures represent the usual market quotations and the high.

	Low	High	Low	High
	Raw		Boiled	
1 to 2 barrels	82-83	88	85-86	91
3 to 5 barrels	81-82	87	84-85	90
6 to 9 barrels	80-81	86	83-84	89

Gasoline.—With a demand for gasoline that shows continued improvement, there is an easing in the quotations this week and a flat price of 14½c now prevails. Up to the present this has been the price for tank wagon with drums ½c above.

Turpentine.—The turpentine market has been hit hard during the week, the quotations of the refiners for single barrels having dropped from 68c to 64c. However, the trade has not been affected to this extent although the tone is easier and tends towards the low quotation of last week—66c.

	per gal.	
½ bbl. lots	69c	72c
1 bbl. lots	66c	69c
2 to 4 bbl. lots	65c	68c
5 to 10 bbl. lots	64c	67c

Putty.—The higher cost of whiting has finally had an effect on the putty market and quotations have been advanced 10c all around, with 20c for bladders. Quotations now are:—

Bulk in casks	2 40
Bulk 100 lb. drums	2 60
Bulk 25 lb. drums	2 70
Bladders in bbls.	3 00

Lead.—An advance of 25c in the price of lead on the local market, following an increase by the Trust in the United States, together with the continued high cost of oil, puts white lead in a very strong position and further advances are likely to take place. For ton lots $8.95 is still quoted with less than tons 30c higher.

Zinc.—The zinc market has advanced to such an extent that prices are only nominal and very little is changing hands.

TORONTO.

TORONTO, Ont., May 27.—The past week has been somewhat quieter in the paint trade, due to the cool weather. Indications point to a lower volume of business this month than usual, but, considering the conditions prevailing, dealers are not complaining. The country trade is satisfactory, and the city trade is showing some improvement. Quotations are very firm, but have not advanced as much as high cost of material might justify, importers and jobbers having absorbed some of the increase. Quotations on some lines are more or less nominal. The long-expected advance in putty has materialized, quotations being now 10c higher in bulk and 20c in bladders for standard. Linseed oil and turpentine are unchanged, but an adjustment of the present price list is under consideration which, if agreed upon, will benefit the trade. Collections are fair.

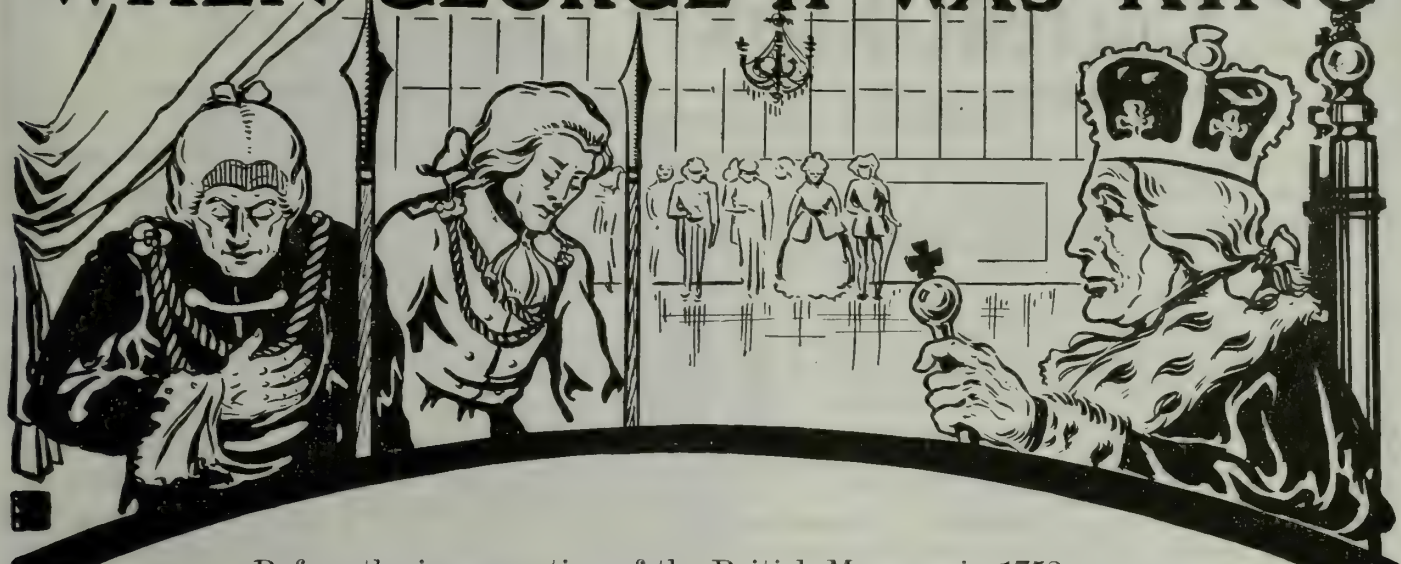
Linseed Oil.—Flaxseed advanced early in the week, and then declined to $1.79 at Winnipeg. The crushers claim that they cannot make any profit in oil at the present prices. Quotations have narrowed down and range from 82c to 85c for raw oil, the former figure being more generally heard. The following prices are being quoted in Toronto:

	Raw.	Boiled.
Single barrels	82	85
3 to 5 barrels	81	84
6 to 9 barrels	80	83

Turpentine.—The demand for turpentine is improving, and this will probably continue. Stocks of turpentine are low and prices are firm. It is reported from the South that production is below last year, and that last week sales were about equal to receipts. The following prices are quoted in Toronto for turpentine: Single barrels, 68c; 2 to 4 lbs., 67c; and 5-gallon lots, 75c per Imperial gallon.

White Lead.—The booking date for white lead has been extended to June 30. Prices are very firm, but unchanged, and are given in the current paint market quotations.

Dry Colors.—The market is very unsettled, and the situation shows no improvement. Prices on some lines are very firm, while others are nominal. Vermilion has been cancelled.



Putty.—The advance in putty, which has been predicted in these columns for some time, has now gone into effect. This is due to the increased cost of both whiting and linseed oil, the former being scarce and affected by the high ocean freight rates. Standard putty has advanced 10c a cwt. in bulk and 20c in bladders, in less than ton lots, with the usual 60c extra per cwt. for pure putty. The following are the new prices for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.50
Bulk drums, 100 lbs.	2.70
Bulk drums, 50 lbs.	2.75
Bulk drums, 25 lbs.	2.80
Bulk drums, 12½ lbs.	3.05
Cased tins, 25 lbs.	3.00
Cased tins, 12½ lbs.	3.20

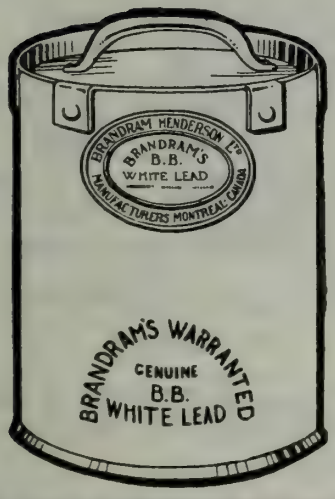
Glass.—Conditions in the trade call for a more equitable adjustment of the present schedule. This question is being carefully considered by the dealers, and it is highly probable that at no distant date a new list will be announced.

By inaugurating the one-price system; fair prices; money refunds, large stocks and generous service, the public appreciation, confidence and patronage is established and good will is maintained.

WHEN GEORGE II WAS KING

Before the inauguration of the British Museum in 1753.

Before the fall of Quebec in 1759.



Before the Steam Engine was developed in 1774.

Before the Declaration of American Independence in 1776.

And long before the "Times" was first published in 1788, the firm of Brandram Brothers & Company was manufacturing its products in England.

Their development of the Brandram process of corroding White Lead, which resulted in the standard Lead of the world, known as

BRANDRAM'S B.B. GENUINE WHITE LEAD

marks the greatest single improvement in the Paint Industry in the past two centuries.

The principle of this Process has survived all changes since its first manufacture, and this principle is applied in its perfection in Canada at the splendidly equipped corroding plant of

BT STANDS FOR BEST BT STANDS FOR BEST BT STANDS FOR BEST BT STANDS FOR BEST BT STANDS FOR BEST BT STANDS FOR BEST BT STANDS FOR BEST

Why BT Hay Tools Are the Best

Beatty Bros. are the headquarters for hay tool goods in Canada and sell more hay cars, forks, etc., than all other firms combined.

The line is a very broad one, for Beatty Bros. have bought out in the past few years all the Canadian hay carrier manufacturers except one or two. The best features of every line have been retained.

In 1904 Beatty Bros. took over the Oshawa or Provan line, made in Oshawa.

In 1905 they bought out the Whitman & Barnes Hay Carrier goods.

In 1909 the Tolton Hay Carrier business in Guelph was taken over, including the big Tolton or Emerson car.

In 1912 the Wortman & Ward Lines, including Hay Carrier Goods, made at London, were taken over.

The BT Line now includes 23 makes of Hay Carriers, some of which are shown in the list below.

As in all the BT Lines, the BT Hay Carrier Goods are noted for the good service and satisfaction they give. The hay car forks and track are heavier and stronger than any others.

You will please your customers by selling them the BT Line. Every farmer knows that BT Stands for Best.

Specialties that are in demand at this time of year

The following lines yield a handsome profit for the dealer who makes an effort to supply the needs of the housewife and home owner:

CP Oxidized Art Enamels. Just the thing for renewing the finish on woodwork, shelving, kitchen furniture, etc.

CP Bath Enamel for refinishing the bath and similar surfaces about the house.

CP Canoe Enamel produces a fine, durable gloss that withstands severe usage and rough weather. For boats, canoes and porch and lawn furniture.

CP Floor Wax, easy to apply, produces a bright, hard finish on hardwood floors.

CP Wire Screen Paint for all kinds of screens. Does not clog the mesh.

CP Stove Pipe Enamel. Housewives know it for the satisfaction it gives.

CP Gold and Aluminum Paint for picture frames, radiators, bric-a-brac, etc.

CP Sun Furniture Polish gives a bright, lasting polish for furniture and floors.

CP Sun Brass Polish for cleaning and polishing brass, copper, bronze, etc.

READ THIS BOOK ON WINDOW DRESSING

It is filled with illustrations of attractive displays — prize-winning displays in fact—because the booklet is the result of a window-dressing prize contest. Each picture contains a suggestion. Each suggestion can be worked into your display of

SIMONDS SAWS

A descriptive story runs through the booklet, telling some interesting facts about window trimming, which is a part of the service we offer Simonds Saw Dealers. No matter whether you handle Simonds Hand or Crescent Ground Cross-Cut Saws, you should have one of these stories about window dressing. Simonds Saws, as you know, are very high-grade saws, therefore the suggestions in the book must also be high-grade. A copy of the booklet may be had for the asking.

Simonds Canada Saw Company, Limited

St. Remi Street and Acorn Avenue, MONTREAL, QUE.

Vancouver, B. C. St. John, N. B.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test—and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

A Straight Talk from the Manager

Getting the Bottom Price

EVERY hardware merchant is convinced of the necessity for getting the bottom price on every bill of goods that he orders—quality always considered.

¶ But it is notorious that some dealers underbuy others. How do they do it?

¶ Study the methods of successful hardware buyers and you will find that they are continually on the search for information about hardware products and prices. They read Hardware and Metal's advertising pages every week, and are constantly writing to the advertisers for more information. Then, with this information before them, they are able to buy the goods best suited to their trade, at the lowest price.

¶ "The Buyer who gets the Bottom Price is the one *who knows what It is.*"

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

JIFFY Detachable Screen Door Hinge

Patented

Illustration shows door being hung without tools. Pull the lever and it's done. No more trouble with screws—the parts have only to be screwed on once. Nothing to equal it for WINTER STORM DOORS, as well as SCREEN DOORS. Made in all finishes, twelve pairs packed in a box. Also individual sets, which includes one pair hinges, screws, handle, hook, one set to a carton.

Be sure and have your jobber show you this hinge before buying others, or WRITE FOR SAMPLE TO

SAUNDERS & WAINWRIGHT

Go to Chicago With Your Ad Man

Attend with him the big Convention of Associated Advertising Clubs of the World, June 20 to 24, 1915

You will assimilate more knowledge of modern methods of Advertising, Selling, Distribution, and Management during these five days than could be obtained in a lifetime of book study.

You will be brought in touch with the men who have done and are now doing the big things of business. You will participate in the biggest business meeting the world has ever known. You will listen to the expressed thoughts of distinguished Americans concerning present day and future business movements.

You will enjoy Chicago's wonderful park system, boat rides on Lake Michigan, modern hotels, theatres, and other amusements, including the big street pageant, and the Gridiron Show given at the Auditorium Theatre by 150 Chicago Advertising men.

Distinguished Speakers. President Wilson, State conditions permitting, will head the notable array of speakers. Hon. William Jennings Bryan, George Horace Lorimer, Arthur Brisbane, John H. Fahey and Henry Watterson are among the others who will be heard.

Advertisers in and publishers of trade and technical journals will hold special Departmental meetings to discuss their own problems and learn how they can co-operate to better advantage. Other departmental meetings will take up such subjects as catalogues, engraving, printing, mailing lists, sales plans and kindred subjects.

The ladies are wanted too. Special entertainment — teas, luncheons, automobile trips, etc., is being arranged for them by Mrs. Chas. H. Porter and her committee.

Clear up your desk. Take a five days' vacation in a lake-cooled city. Mix with the business builders. You will return a better business man; a better physical man; and a better thinking man.

For further information, programme, rates, etc., address Convention Bureau, Advertising Building, Chicago, Ill.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps
They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

The Franco Radio "Nitrogen" 6" battery must not be confused with the ordinary 3-volt type of batteries now appearing on the market.

The Franco Radio "Nitrogen" battery is not a common dry battery, but is constructed on an entirely different principle with different ingredients.

Compare the Franco Nitrogen battery with others and note the difference in length of life and light.

LONG LIFE ON SHELF AND IN SERVICE.

Catalogue illustrating our complete line mailed on request.

ALWAYS THE LATEST and BEST IN ELECTRIC NOVELTIES.

Handle your Oils and Gasoline with the

Wayne Pump

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

The No. 1 Fire Pot

is the World's acknowledged best, because with it you can do your work easier, quicker and better. With no other Fire Pot can you do as wide a range of work. The No. 1 will heat a pair of 12-lb. coppers and melt a pot of lead at the same time, if desired, and by removing the top section, the base with the burner can be used as a brazing fire or torch. The No. 1 will soon pay for its cost in the saving of fuel alone. All leading jobbers will supply at factory price. Send for catalog—it's free.

The No. 1 Fire Pot

ALUMINUM

ZINC

OR

The War—

has raised the price of zinc and consequently the price of washboards—

BUT

the BIG CANE VALUE IN WASHBOARDS IS BIGGER THAN EVER because it has come to a point where we can use aluminum in place of zinc.

ALUMINUM IS LESS LIABLE TO CRACK, SPLIT OR CARRY DEFECTS THAT WILL TEAR THE CLOTHING BEING WASHED ON IT, AND IT PRESENTS A MUCH BRIGHTER APPEARANCE THAN ZINC, AND IS MORE ATTRACTIVE ON THAT ACCOUNT.

We are prepared to deliver our standard brands of washboards with aluminum washing plate at **the same price as that of zinc** ones on receipt of instructions from our customers, through the jobbing trade. ORDER NOW.

WEBBING

Manufacturers of

Cotton, Linen and Woollen Webs, Straining Webs, Ready-Made Girths, Rollers, Surcingles and Horse Clothing of every description for the Saddlery Trade; also of Chair, Tray, and Cocoa Binding Webs, for Upholstery Purposes.

Awards:
Gold Medals, Calcutta, 1883; International Exhibition, 1885; and First Order of Merit, Adelaide.

Delta Files

will make your file stock fly

and they will increase your sale of other mill supplies

They are the only line of files from 3 to 24 inches made absolutely of crucible steel.

They cut deeper, faster and have a longer lasting cutting edge.

Their distinctive service brings the mechanic back and back again for more and the connection you build up by this repeat order business will increase your sale of other mill supplies.

There is a shape and size for every requirement.

We make your sales still easier by supplying attractive display signs, and circularizing your vicinity, mentioning you as our local distributor, etc., etc.

The sooner you sell the Delta the sooner your profits will grow.

UNIVERSAL
Vacuum Bottle

No. 80 Half Pint
No. 81 Pint
No. 82 Quart

UNIVERSAL
Vacuum
Auto Accessories

In planning your auto accessories department don't overlook the importance of carrying a high grade stock of vacuum specialties. Every owner of a car is a prospective customer for one or more articles in this line and the hardware store, where he buys his spark plugs, jacks, gasoline, etc., is the logical place for him to find them.

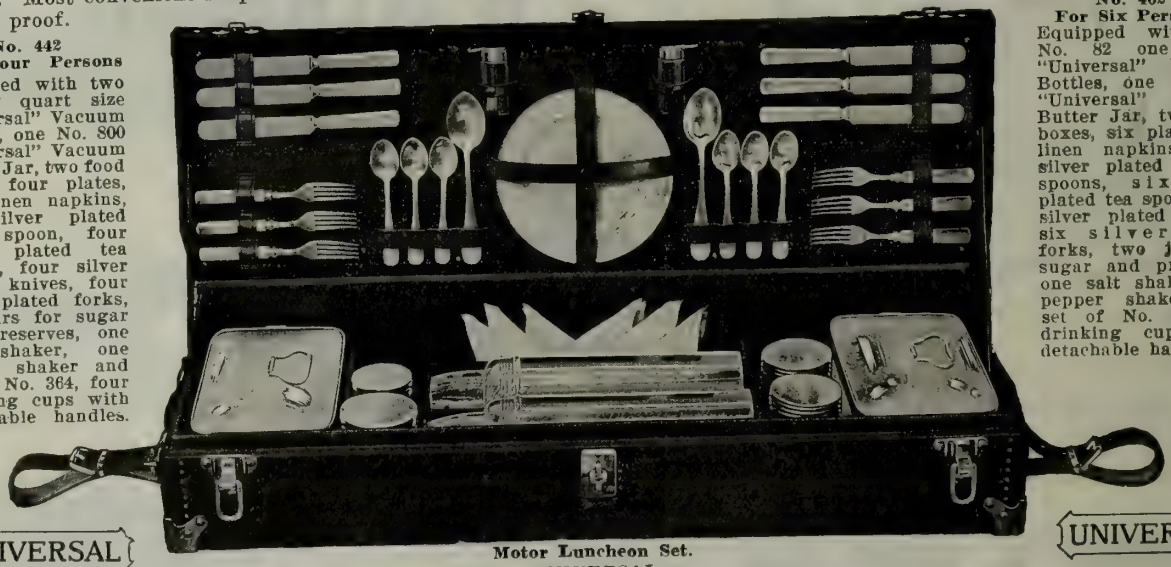
UNIVERSAL
Vacuum Food Jar

No. 800 Half Pint
No. 811 Pint
No. 812 Quart

When you carry UNIVERSAL Vacuum goods it isn't necessary to order them in large quantities. Our system of quick deliveries enables you to carry a small, select stock which can be turned over several times in the course of a year, keeping your goods always bright and clean and the percentage of profit high.

UNIVERSAL Motor Combination Case.

You don't have to demonstrate, explain and persuade when you sell UNIVERSAL Vacuum Goods. The fact that they bear the familiar UNIVERSAL trade-mark is sufficient guarantee that they are right in every detail. This saves your time and that of your clerks, and makes your accessories department productive of greater volume of sales.



No. 152 Case only. No equipment.
No. 162 Fitted with two No. 72 quart bottles and two No. 42 quart Lunch Boxes and one set No. 364 cups.

No. 172 Fitted with two No. 82 quart bottles and two No. 52 quart Lunch Boxes and one set No. 364 cups.

Case of wood with dovetailed corners covered with dull black heavy enameled cloth. Secure lock and key fastenings and corners reinforced with leather. Lining of green leatherol, smooth and sanitary. Can be wiped out with damp cloth. Most convenient shape and size for limited space in machine. Leather handle on cover for carrying. Dust and rain proof.

No. 442
For Four Persons

Equipped with two No. 82 quart size "Universal" Vacuum Bottles, one No. 800 "Universal" Vacuum Butter Jar, two food boxes, four plates, four linen napkins, one silver plated table spoon, four silver plated tea spoons, four silver plated knives, four silver plated forks, two jars for sugar and preserves, one salt shaker, one pepper shaker and set of No. 364, four drinking cups with detachable handles.

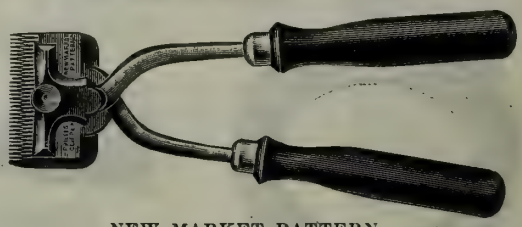
PRIEST'S HORSE and TOILET CLIPPERS

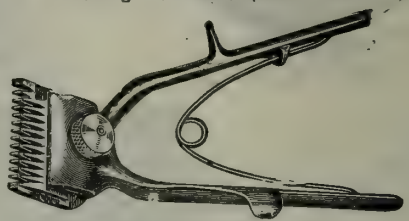


Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

Some styles of hand Horse Clippers are illustrated below. All handles are heavy malleables, with threaded shanks, to keep the wood handles from pulling off. Spring tension on the adjusting nuts insures perfect contact at both ends of the cutting plates. Plates are perfectly ground and designed to cut hair, not break it off by main force.

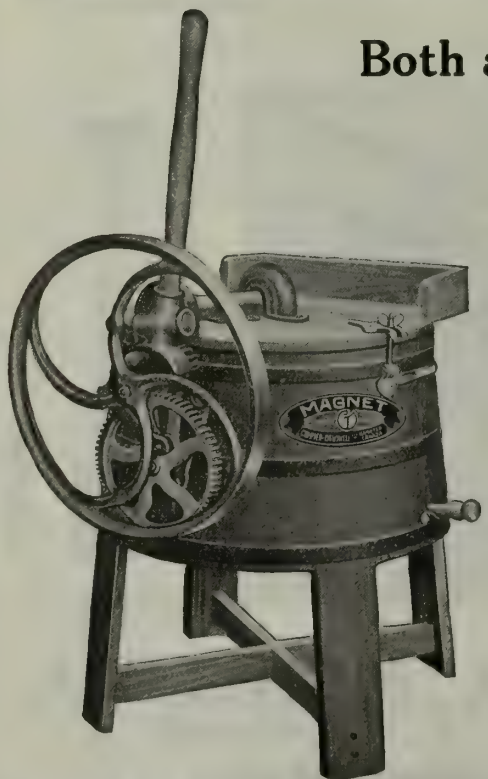
BALL BEARING
Retailing at about $2.50.



NEW MARKET PATTERN
Retailing at about $1.75.

LENOX
Retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.



Hunter, Fetlock and Dog Clipper, retailing at about $1.50.

Canadian Agents for Wiebusch & Hilger, Ltd., New York City

New Machines with an Old Trade-Mark

Both are Cummer-Dowswell's

Always use C-D Wringers with C-D Washers. The Combination gives Unequalled Results.

The "MAGNET" is one of the easiest running and most convenient to operate hand washers of the many we have produced. It can be operated sitting or standing. The mechanism is attached to side of tub (instead of cover), and can be belted to either gas, gasoline, steam engine, windmill or electric motor power without any change to gearing. Cover can be lifted without removing belt or stopping power.

The "NEW CENTURY JUNIOR" is a swinging tub hand washer built on the well-known and time-tested NEW CENTURY principle, but without a rod up through centre, leaving nothing inside the tub but two rubbing boards.

Both have the same perfection in construction, materials, easy running and lasting qualities that have made our products known and used from Halifax to Vancouver.

CUMMER-DOWSWELL, Limited

HAMILTON, ONT.

No. 1

Size—28½" x 16¾" x 16" high.
Finish—galvanized inside and out.
Capacity—20 lbs. of ice.

No. 35

Size—18½" x 12½" x 13½" high.
Finish—white enamel inside and out.
Capacity—10 to 15 lbs. of ice.

There is a demand for a well-made Ice Box in your territory if the price is within reach. This is what you have been looking for to fill this demand.

No. 1 has removable ice container, deeply recessed bottom, and is made so that the ice-water cannot get into the food.

No. 35 has rounded corners, seamless covers, and because of very favorable manufacturing conditions is a great bargain at present prices.

Both of these Ice Boxes are also vermin-proof containers for food in the winter and are easily cleaned.

QUINCY, ILL., U.S.A., Oct. 10th, 1914.

American Rolling Mill Co.,
St. Louis, Mo. Attention:- Mr.W.S.Stephenson.
Gentlemen:-

This is in reply to a communication received from your Factory which asks our opinion as to the value of Armco Ingot Iron over that of sheet steel. We beg to inform you that we have used this product for several years in the manufacture of our Ranges and up to the present time have had no complaint from any having rusted.

From a personal test that we gave this metal we are convinced that it is far more durable than sheet steel for the manufacture of any products which are subject to moisture or the gases generated from the combustion of a fire. We have no doubt this material will obviate the past difficulties we have had with steel ranges rusting out while in the hands of the consumer.

The finish of the stock is equal to any sheet steel that we have ever had and we are pleased indeed to recommend this material to anyone who requires sheet metal that has more durability than sheet steel.

With best wishes, we are,

Yours truly,

EXCELSIOR STOVE & MFG.CO.

AO.HK.

A "Metallic" lined kitchen is a beautiful, sanitary room

Any woman would gladly see these cleanly, artistic, fire-retardant "Metallic" steel plates in her kitchen

Hardware men and tinsmiths will find any amount of business waiting for them in private homes if they will just go after it. Almost any woman in your town would like to talk over with you the idea and cost of making her kitchen more attractive with "Metallic" Art Steel Plates. They are easily put on, the patterns are clean and sharply embossed, and strictly up-to-date.

Why not write us to-day for prints, prices and catalogues and make a start now?

THE METALLIC ROOFING COMPANY, LIMITED

TORONTO Manufacturers WINNIPEG

JOHNS-MANVILLE SERVICE COVERS THE CONTINENT

J-M Responsibility—the logical outgrowth of over half a century's progress, achievement and business integrity—stands as a stronger assurance for your customers' satisfaction than even the most complete written guarantee.

J-M Asbestos Roofing is not "as-good-as" roofing; it is the standard of comparison

This roll roofing is not offered to the hardware trade as a competitive article. It is not manufactured to compete with cheap roofings with which it has nothing in common except that it is ready to lay. It is an "Exclusive" roofing. When its advantages over slate, shingles and metal roofings are pointed out, it is certain to be used on any structure of permanent character.

J-M Asbestos Ready Roofing never needs coating or painting—its first cost is its only cost—it is the cheapest-per-year of all prepared roofings; for it needs no attention after being laid.

It is fire-resistant, for sparks and flying brands will not ignite it—instead of spreading a fire, it blocks it. It is non-conducting—resists Winter cold and reflects Summer heat. Anyone can lay it right and tight with J-M Vise-Grip Cleats—without cement in laps and joints.

Literature on this subject is valuable to you, for it shows how this J-M product serves the purchaser—and that means more business for you. Prices and terms on request to nearest branch.

WIRE

Hardware Dealers—An exact duplicate of the ad. below appears in the May 27th and June 3rd issues of "Canadian Machinery." Tear off here and paste on your window with a display of Starrett Tools.

Starrett Calipers

Kinds

Starrett Calipers are made in a number of styles and sizes to suit every practical need of machinists and toolmakers. There are round leg toolmaker's spring calipers, Fay patent calipers, with split nut for quick action, Yankee spring calipers similar to the Fay but not quite as heavy. There are firm joint calipers, screw-adjusting firm joint calipers, lock joint transfer calipers for transferring measurements over ribs, flanges, bosses and in chambered cavities and several other special styles. These are all made of the best steel perfectly tempered to give longest service.

Hermaphrodite Caliper

The Hermaphrodite calipers shown here have sensitive adjustment and are made in the following sizes:

4″—$0.90, 6″—$1.00, 8″—$1.25, 10″—$1.50

No mechanic should purchase calipers or any other tools without consulting the Starrett 320-page catalog No. 20M.A. (sent free on request) for styles, sizes, and prices.

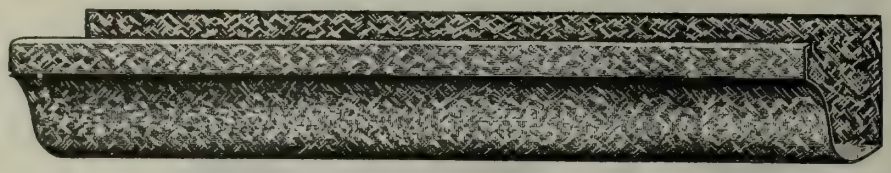
Facts About Dazey Churns

More than 350,000 are now in use in hundreds of thousands of homes, in every part of the world.

In practically every town in the United States and a great many Canadian, responsible Dealers in Hardware sell and recommend Dazey Churns.

Are carried in stock by more than 150 of the Largest Hardware Jobbers in the United States and many foreign countries.



That they are undoubtedly the greatest advancement of the last century in churn making — combining Simplicity with a Scientific Principle of separation of butter-making properties of the cream —resulting in the production of a perfect granular butter in the marvelous time of 2 to 6 minutes.

That they have revolutionized butter-making — actually resulting in nothing short of a national conversion.

Special Prices to the Canadian Dealers. Catalog and information on how to increase your churn business will be sent upon request.

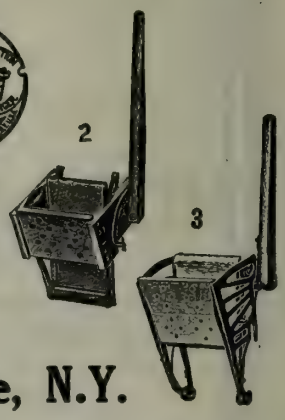
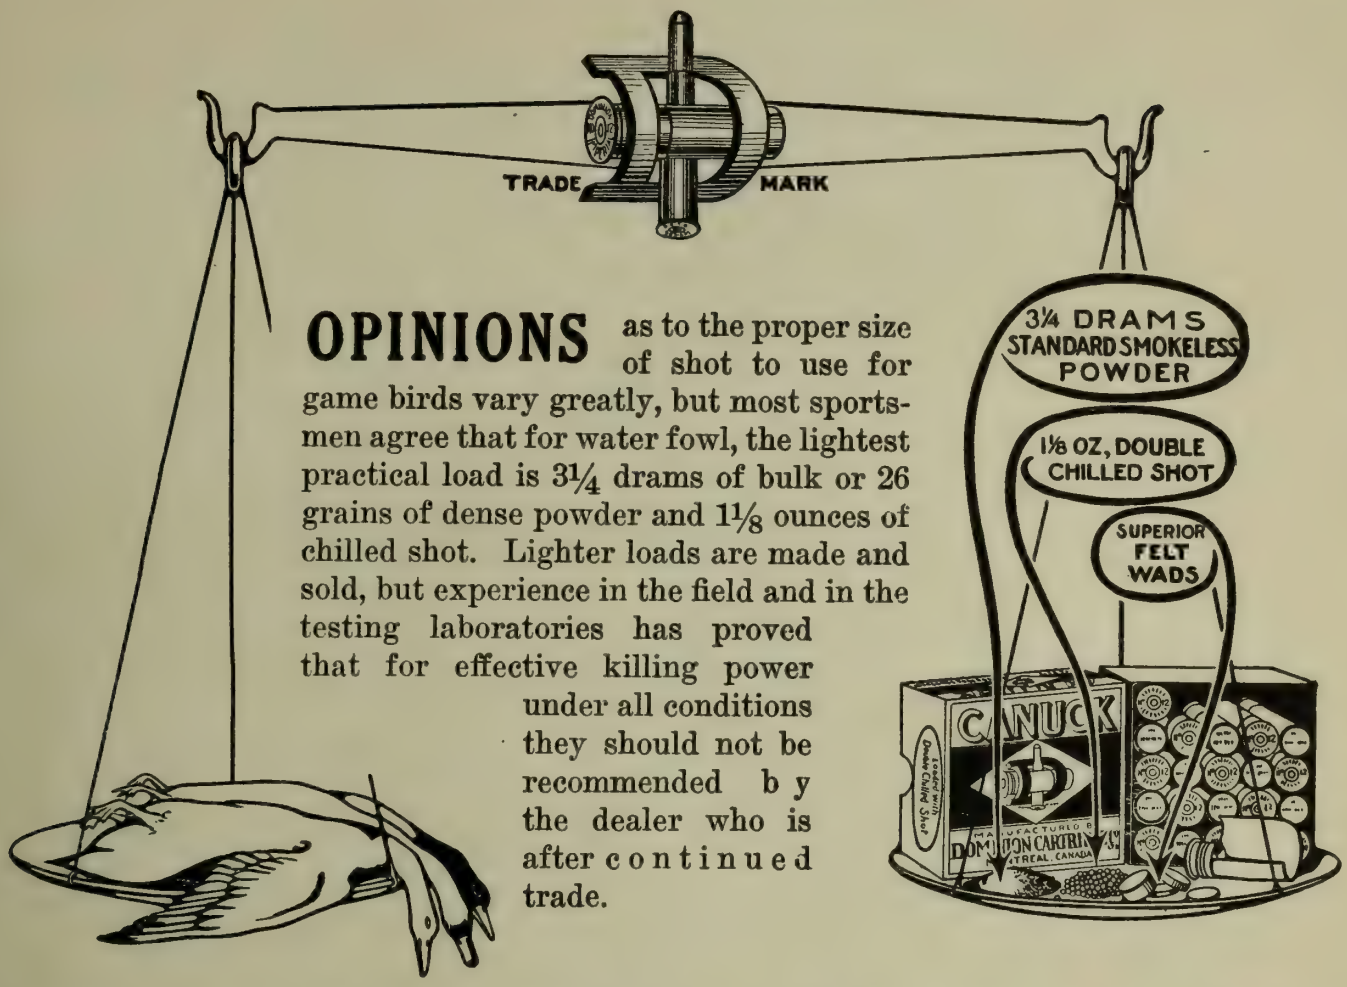
THE WHITE MOP WRINGER



always bears this trade-mark

LOOK FOR IT.



Janitors and Housekeepers praise these wringers, because they wring easily and neatly, are durable, practical and useful.

Ask your jobber for them or write to us.

White Mop Wringer Co., Fultonville, N.Y.

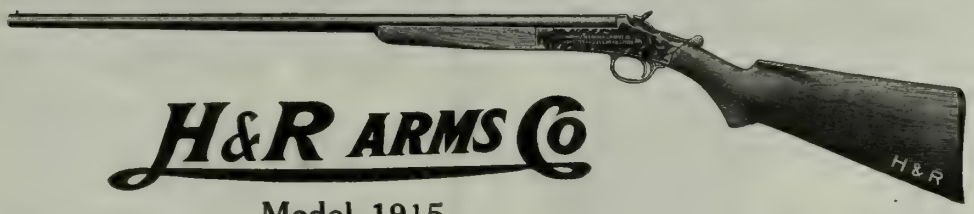
OPINIONS as to the proper size of shot to use for game birds vary greatly, but most sportsmen agree that for water fowl, the lightest practical load is 3¼ drams of bulk or 26 grains of dense powder and 1⅛ ounces of chilled shot. Lighter loads are made and sold, but experience in the field and in the testing laboratories has proved that for effective killing power under all conditions they should not be recommended by the dealer who is after continued trade.

Dominion Loads of this Powder and Shot Combination are

IMPERIAL	**IA**	Dupont, Empire, Bulk.
	IF	Ballistite, Infallible, Dense.
CANUCK	**DA**	Dupont, Empire, Bulk.
	DF	Ballistite, Infallible, Dense.
SOVEREIGN	**SK**	Dupont, Empire, Bulk.
REGAL	**RJ**	Ballistite, Infallible, Dense.
CROWN	**CJ**	Snapshot Black.

These are the 12 Gauge loads. Each one may be gotten from your jobber in any size shot, 1 to 10, BB, AA, SSG or Single Ball. Order by stating load letter, size of shot and brand of powder.

Buy Dominion Shot Shells because they are full value. Sell them because they give entire satisfaction.



Canadian Sportsmen shoot Dominion Shot Shells.

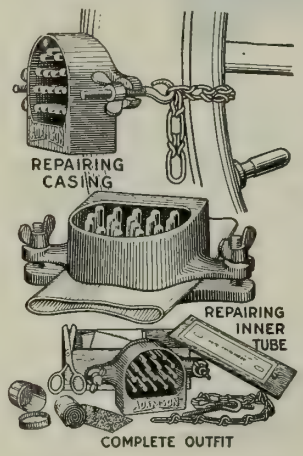
WRITE TO-DAY FOR A CATALOG OF OUR COMPLETE LINE

An Ancient Symbol And a Modern Means of Protection

The ancient custom of **seeking** protection was to have a winged disk carved above the doorway. The modern practice of **getting** protection is to have a Colt in the home. A Colt Automatic makes **your** home protection an actual fact—not a fanciful trust. The Colt is a tangible bulwark against lawless intrusion—and is automatically safeguarded against unintentional discharge.

The Colt Automatic

is a correctly balanced, ever-ready, hard-hitting pistol. The Colt is automatically **locked when cocked.** You must simultaneously **grip the grip** and pull the trigger in order to fire it. But, see the Colt at your nearest firearms dealer. You will sense the feeling of safety as your fingers close over its sturdy grip. Compare it with any pistol and your choice will be a Colt.



The Colt was adopted by the U. S. Army and Navy because of its "Marked superiority to any other known pistol."

WATFORD, ONTARIO

Sporting Goods and Motor Accessories Section.

"And Where Do I Come In?"

WHEN a manufacturer begins to tell you, the retailer, about his advertising—the number of papers he is using, the money he is spending—your first and most natural query is, "Where do I come in? How does all this affect me?"

We realize that you are not as much interested in Hercules advertising as we are. It is not as vital to you. It is not revolutionizing your business. But it *is* doing two things that affect your business that are of interest to you, that you should know about.

Hercules Advertising is increasing the consumption of ammunition.

Hercules Advertising is increasing the consumer's knowledge of powders and creating a much greater demand for Infallible and E. C. Smokeless Shotgun Powders in loaded shells.

The first of these results of Hercules Advertising is having the direct effect of increasing your business.

The second may during the past year have brought relatively few requests to you, as an individual retailer, for the two Hercules Smokeless Shotgun Powders. But these few requests show the way the wind is blowing. Taken the country over, they are multiplied many thousand times.

They should prove to you that it is worth your while to *specify Infallible or E. C., or both, when ordering loaded shells.*

This year we are advertising in double the number of publications used last year. These publications have a total circulation of approximately five million copies.

On the opposite page are reproduced a few of the advertisements we are running, lists of magazines, etc. Please glance at them.

An Attractive Poster You are familiar with the unusually striking posters we got out last year—the trap shooter and the duck hunter. You probably used them. If you did you will surely want our 1915 poster—a pretty girl idea this time—that will be ready shortly. If you did not, all the more reason for taking advantage *now* of this effective display feature.

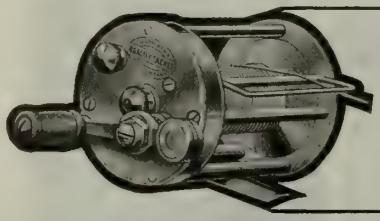
Electros For YOUR Use Actually for your use and your good, *advertising your business*, not ours, are these electros. They cover the sporting goods business thoroughly and they are written to sell your general line of goods first, last and all the time. The name Hercules is not even displayed in the copy. Many retailers are taking advantage of the actual advertising value these electros have. Write us and ask for proofs. Then you can pick those that best meet the needs of your business and your stock.

Sales Producing Booklets We publish several booklets that are sales producers for our customers. If there is a trap-shooting club in your neighborhood, or even if there is not, one of them, "Trap-shooting," will be of especial value to you. It is unusually attractive and convincing. It makes converts for the sport, tells how to start a club, how to shoot—increases your sales of ammunition.

A few copies distributed among your customers will do both you and ourselves good. May we send them?

HERCULES POWDER CO.

Wilmington, Del.



Sporting Goods and Motor Accessories Section.

Satisfied Customers—Means Greater Business

MR. DEALER: The South Bend Anti-Back-Lash Casting Reel is positively guaranteed to give satisfaction—note following Ad. now appearing in all Sportsmen Magazines.

Every time you sell a South Bend Anti-Back-Lash Reel you are doing your customer a favor—He gets continuous enjoyment from his fishing—He will cast without back-lashes—hence fish more and that means more high-grade tackle sales for you. We also make a complete variety of Bait-Casting Tackle. **Send for new, complete catalogue.**

BEFORE YOU BUY A CASTING REEL

Investigate the merits of the South Bend Anti-Back-Lash—Ask your dealer to let you try it in comparison with any other reel on the market purported to be anti-back-lash or a minimizer of back-lashes—then decide for yourself.

It is the Original and only true Anti-Back-Lash Reel made—Is Convertible—Can be used as a regular reel or anti-back-lash by a turn of adjustment screw—Thumbs itself—Automatically stops when bait lands—and has many other exclusive wonderful features which no other reel possesses.

Absolutely guaranteed without time limitation—will fulfill all we claim—money back if not entirely satisfied.

Hardwaremen Sell Sporting Goods

Playing Ball as Usual—Hardwaremen Taking Part in Sports — and Selling Sporting Goods—Many Hardware Firms Have Added Sporting Goods During the Last Few Years.

By HENRY LEWIS.

The above window display of sporting goods, arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Winnipeg, furnishes many ideas for the window trimmer who wishes to make an attractive and seasonable display of sporting goods. Every window-trimmer should make a careful study of the above display.

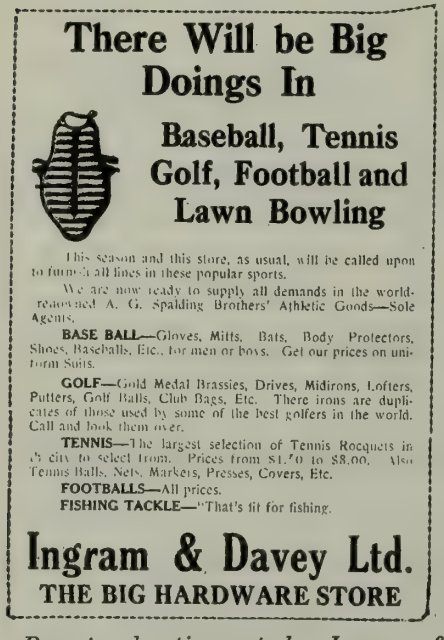
"A CROWD estimated at nearly a thousand saw the lid pried off the City Baseball League for the season of 1915 recently at the new ball park in the south end at the corner of Talfourd and Emma Streets. The Imperials and the Perfections, the latter team newcomers in the league, furnished the bill, which was preceded by a parade from uptown, headed by the Collegiate Cadet Bugle Band in McFee's tally-ho, and in which a score of automobiles joined, loaded to the guard rails with enthusiastic fans. Upon arrival at the grounds, Mayor W. R. Paul proceeded to the centre of the diamond, and, with Dr. Henderson and Secretary Dave Rougvie, opened the ceremony by pitching the first ball of the season. The genial mayor, after several attempts, finally put over a strike on which Dave took a healthy swing, and which the doctor muffed, after which Umpire Walter Costello called time and the big game was on."

The foregoing from a Sarnia newspaper is the opening paragraph of a lengthy article announcing the opening of the baseball season. It is typical of many hundreds of other announcements that have appeared during the past few weeks in newspapers throughout Canada. The town or city that does not boast of one or more ball teams is indeed a dead one. The teams of course are in many cases composed of amateur ball players, but in addition to the amateurs there are the well-seasoned players who have taken more or less interest in baseball for many years. Even the soldiers in training in many of the camps in Canada spend considerable of their leisure periods in playing baseball or football.

Mercantile leagues, public school and high school leagues, professional leagues, Sunday school leagues, and many other baseball organizations are just at this period, taking a great interest in the keen and fascinating game of ball. Even the small boys are in the game, and many of the most thrilling and exciting contests take place on corner lots, or any place—it matters not to the small boy—where a fair-sized plot of ground is available. It is the ambition of almost every small boy to become a ball player, and very often the nickels and dimes are saved-up for several weeks. to buy the dollar-fifty glove that was shown in the "Jones hardware store window," or the ninety-cent bat that was marked "special" in the same window display. The trade of the small boy at the present time is worth a great deal more than it was some years ago, for the average small boy of to-day has more money to spend than the boy of fifteen or twenty years ago.

The extract from the Sarnia news-

paper states that Dave Rougvie pitched the first ball. It is interesting to note that "Dave" is a hardware merchant, and in this connection it might be stated for the benefit of those not acquainted with conditions that many of the best sportsmen—by sportsmen I mean the men who are working hard to interest the Canadian youth in clean healthy sports—are retail hardwaremen.



Many retail hardwaremen are officers of sport organizations, and not a few take an active part in the sports. Few indeed are there in the hardware business who do not take a keen interest—in fact an active part—in either baseball, football, lawn bowling, golf, lacrosse, lawn tennis, fishing, shooting, curling, hockey or some other of the many splendid and healthy sports so popular in Canada.

When you stop for a few minutes to think over the vast number of sporting organizations in Canada, you cannot help but wonder where all the sporting goods come from. Think of the many thousands of articles, used in playing the various games that are seasonable and popular at this time of the year.

Sporting goods are secured through various sources, and have in the past, in fact to a certain extent to-day sold through exclusive sporting goods stores, book and stationery stores, and last but not by any means the least—hardware stores.

Some retail hardware concerns have sold nearly all lines of sporting goods for many years, while others have always sold shooting and fishing supplies, but not baseball and tennis goods.

During the past five years the numbers of hardware merchants who have enlarged their sporting goods departments to accommodate such lines as

Recent advertisement by Ingram & Davey, Ltd., St. Thomas, Ont., featuring sporting goods.

Recent advertisement featuring sporting goods. By Brace, McKay & Co., Ltd., Summerside, P.E.I.

baseball and tennis goods, lawn bowls, etc., have increased at a surprisingly rapid rate, until to-day the most important sporting goods distributors in most of our cities and towns are retail hardware merchants.

Is there any reason why the hardware merchant should not be the distributor of all lines of sporting goods. The huntsmen and the fishermen, the hockey clubs and the gun clubs have from time immemorial looked to the hardwareman for supplies, why not the sportsmen who are interested in other lines? The hardwareman to-day has command of the sporting goods situation in Canada, and judging by present activities he will not only continue to command the distribution of sporting goods, but he will be the means of creating a much greater interest in sports than has ever been exhibited in the past. Many of the sporting organizations now in existence, were started, largely through the efforts of the local hardwareman.

Stocking the Goods.

One of the pleasing features in connection with the sale of sporting goods is that the merchant need not invest heavily when selecting his initial stock. For a very reasonable outlay it is possible to secure a good selection of sporting goods—there is no need to overstock.

Most hardware jobbing houses carry very complete lines of sporting goods. Several houses issue special sporting goods catalogues or supplements to the larger catalogues. It is interesting to note in this connection that some of our large jobbing houses have added many lines of sporting goods to their stocks during the past four or five years. By watching the advertisements in this paper retailers can very often get in touch with manufacturers or wholesalers who have splendid propositions to offer.

I know of one retail hardwareman in an Ontario city, who, despite the fact that the sporting goods trade was supposed to have been almost entirely in the hands of two exclusive sporting goods dealers, put in a stock of sporting goods last year and so far has done a surprisingly large amount of business. The merchant is located in one of the few cities where the trade had been handled almost entirely by exclusive sporting goods stores, and yet this hardwareman has worked up such a volume of sporting goods trade that other hardwaremen in the same city are seriously considering putting in stocks of sporting goods lines which they have not carried in the past.

The window display accompanying this article was arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Winnipeg, and as a window display attracted a great deal of attention. The background of the display is particularly attractive, and should furnish several good ideas for window trimmers who wish to run a sporting goods display.

Hardware Merchant Gets Auto Trade

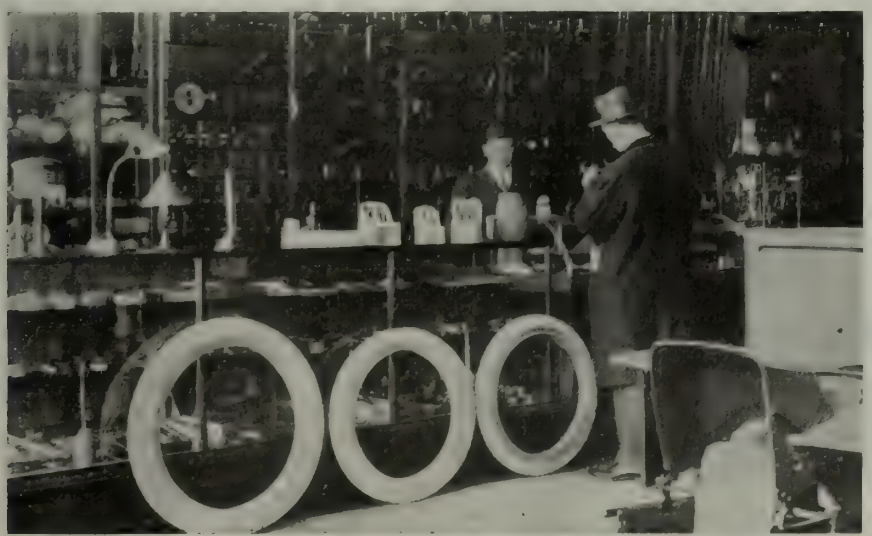
Merchant Sells Auto Accessories But Does Not Conduct a Garage—Sells Cars to Farmers—Mail Order Houses Circularize the Auto Owners—Combating Mail Order Houses.

THE hardware merchant who owns a car has a better opportunity of securing a good knowledge of auto accessories than the man who does not own a car. It does not necessarily follow, however, that a man must own a car in order to become a successful seller of accessories, for there are many hardwaremen who do a large business with auto owners and do not own cars of their own.

P. Phoenix, of Phoenix & Girard, Granby, Que., whose stock of auto accessories excels that of any garage in town, has been in the auto and auto accessory business for ten years. Mr. Phoenix owned a car ten years ago—a steam car. At that time there were only three autos in town. Mr. Phoenix now runs a later model.

While he has never opened a garage, nor gone into repair work, the ten years' experience handling three different makes of cars has not been lost. The repair end of the business he leaves to the garages. Mr. Phoenix is satisfied with the auto accessory business, of which, it is said, the bulk comes to his store.

Mr. Phoenix's stock of auto hardware amounts to about $500 altogether. About half of this is in tires, of which he carries a good number in stock, sizes 30 to 37. In case of an odd tire being ordered, he telephones to Montreal and has it sent on by express. It reaches Granby within twenty-four hours.



Granby is situated on one of the main roads leading to the United States border, along which the traffic during the summer is exceedingly heavy. This is a good source of business. There are a large number of cars in town, but some of his best business comes from the farmers. Around Granby there are quite a number of small towns, like Roxton Pond, each with five or six cars. These are in town every few days, and need gasoline and other supplies. A good salesman can sell them accessories. Each year sees the number of cars owned by farmers increasing by leaps and bounds, so that the automobile accessory business is only in its infancy. Mr. Phoenix says 1914 was his banner year, the demand having picked up wonderfully.

Asked whom he found the best prospect for this line, Mr. Phoenix replied that he found the man in town easiest to interest in accessories. The farmer was a harder proposition, as he usually considered it was bad enough having to pay for the car without spending money on accessories. Instead of going in for a self-starter, he preferred to crank the car. Also he was rather averse to being too fancy, whereas the man in town had to be right up to the minute.

Mail Order Competition.

One of the troubles experienced by the country dealer is from mail order firms, who circularize the whole country, sending price lists to every person owning a car. When a farmer comes into the Phoenix store with one of these price lists, and asks why the price of his tires is higher than those in the city, he replies: "Yes, I can give you tires at the same price, but they are seconds." One farmer was a little skeptical, and insisted on having cheaper tires. Mr. Phoenix, therefore, sent to the mail order house for two. The farmer ran them for three weeks and had a blowout. Then he knew that what the hardware merchant had told him was true. In the end this kind of thing helps the local dealer.

Mr. Phoenix has been in the hardware business in Granby for eighteen years, and is well known throughout that part of the country. Recently he erected a three-storey building, reserving the ground floor for hardware, and the second floor for furniture. The latter is a very important department. He finds 1915 the best year yet in this line, more people, strange to say, having the cash to pay for the goods they buy.

P. Phoenix, of Phoenix & Girard, Granby, Que., interesting a customer in a pair of goggles.

TENDERS FOR EQUIPMENT FOR AUSTRALIAN RAILWAYS.

Tender forms, specifications and drawings have been forwarded by D. H. Ross, Trade Commissioner at Melbourne, for equipment required by the Victorian railways. The tender forms may be inspected by interested Canadian manufacturers at the Department of Trade and Commerce, Ottawa (refer File No. 1435). Particulars of the requirements, together with the date on which the tenders close at Melbourne, are briefly outlined thus:

Victorian State Railways, Melbourne.

No. 28,759. July 14.—100 tons white lead in oil.

No. 28,811. July 14.—60,000 flame arc carbons.

No. 28,817. July 14.—11,880 feet aluminum feeder cable.

No. 28,817. July 14.—Sundry aluminum fittings.

No. 28,822. July 14.—125 tons steel channel bars (as per drawing).

The show case of to-day is a piece of furniture, not a few mouldings around some window glass, and while it is customary to write the value off at the rate of 10% a year, the modern show case is worth almost as much as far as service goes after five years as when first purchased.

Sold Twenty-Two Cars to Farmers

Merchant at Farnham, Quebec, Sold Twenty-Two Cars to Farmers Last Year—So Far This Year he has Sold Fourteen Cars—Big Business Developed in Five Years.

SOME years ago, an American tourist who had spent a very pleasant vacation in Canada, was returning by car, and in an hour or so expected to be back under the folds of Old Glory. He was travelling at a gay old clip, and as he lacked a certain accessory, it was impossible to say really how fast he was going. At any rate he would soon reach the United States border. He had already left the spires of Farnham, P.Q., in a cloud of dust.

It was just at this point—the point where one literally bubbles over with joy at the thought of how fine things are going that something happened, which compelled Mr. Tourist to spend another night in the Land of the Maple Leaf.

At that turn in the road, half a dozen miles from Farnham, the car stopped—simply bucked like a broncho, and planked itself right across the middle of the road.

Back to Farnham.

Mr. Tourist took off the hood. The engine was there all right. It was, not one of those cars which run on reputation alone. There was plenty of gas. He would try her again. No, she had decided to stay out for the night. "Not if I can help it," said the tourist; and he set about assiduously to find out what was wrong. He did find out. Had he been in Montreal it would have taken just ten minutes and a dollar bill to get him started. There was nothing for it but to return to Farnham.

A passing farmer was bribed to haul the car over the six miles of road. And now the job was to get this thing fixed. The local machinist was pressed into service. Automobiles were not in his line, but he did his best. In the meantime, the American, dead-tired, retired for the night at Hotel Farnham. The following morning he was able to start again, but instead of costing him a dollar, this little episode cost ten, and delayed him just half a day.

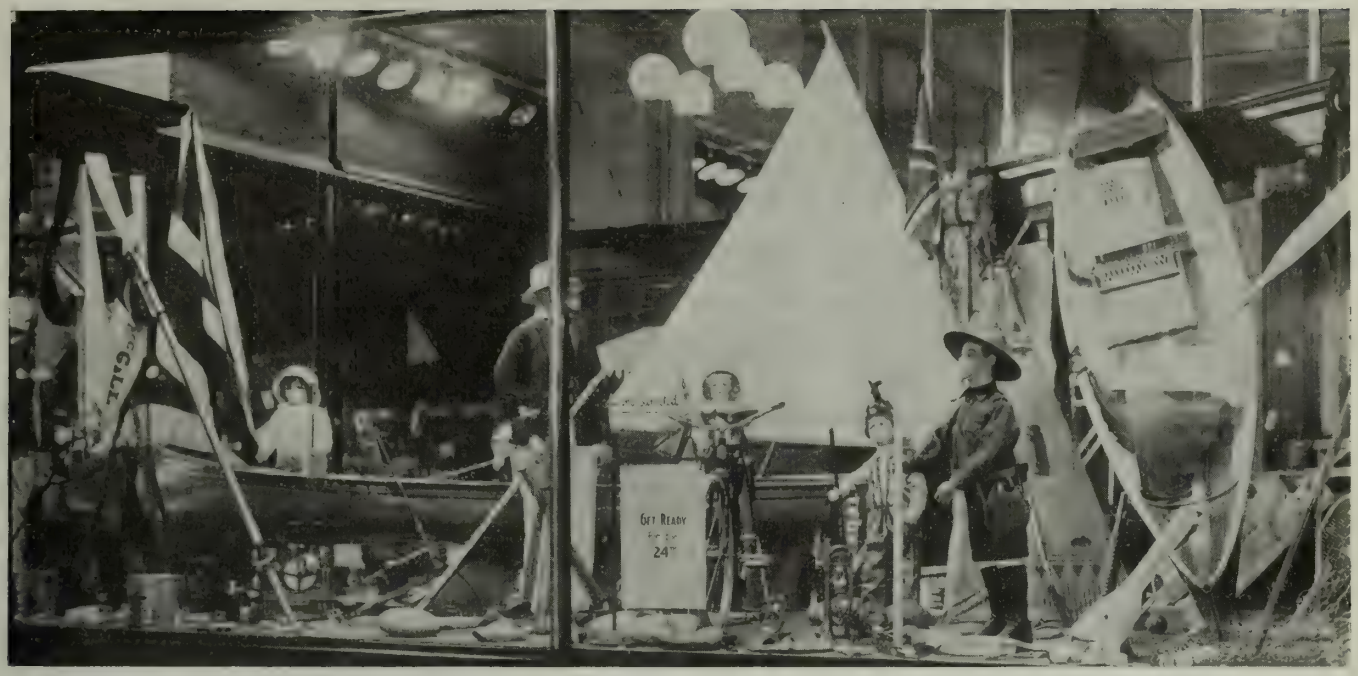
Good often comes out of evil, and L. E. Choquette, proprietor of Farnham's general store, had his eyes opened to the fact that if this kind of thing was going to happen often, there would be a demand for automobile accessories. Without knowing the difference between a Ford and an aeroplane, he opened a new department in his store.

Sold 22 Ford Cars.

To-day his window displays of automobile accessories are equal to anything in Canada. He has built a garage, and is headquarters for automobiles in this part of the country. Last year he disposed of twenty-two Ford cars to farmers in the surrounding country, and this year, despite the war; has already secured orders for fourteen. So important has this end of his business become, that Mr. Choquette is seriously considering disposing of his general store, and devoting the whole of his time to automobiles, accessories, and hardware.

This plunge into a new line in 1910 required considerable nerve, for at that time there was not a single car in the town of Farnham. The only possible source of business was from tourists passing to and from the United States border, and from the farmers, who were at this time beginning to find cars a necessary form of locomotion. Mr. Choquette had been in the general store business for twenty-two years, but not long enough to make him blind to the possibilities of a new line like this. Firstly, a small stock of accessories was put in with the hardware stock, including pumps, tires, spark plugs, and gasolene. It so happened at this time that the number of horses they had on hand was too large, and it was decided to trade one or two for a second-hand car. Thus, Mr. Choquette became the first automobilist in Farnham, and this synchronized with the opening of his new department. As he grew expert in handling his car, his knowledge of accessories increased.

Hired a Machinist.



Naturally he met with considerable difficulty at first. How could a general storekeeper be expected to know everything about a car right off the bat? Mr. Choquette made a wise move—he employed a machinist, and started out to erect a gargage adjacent to his store. He secured a good man, and in a short time was able to cope with any situation. Having hung out their automobile shingle, business began to come to the door. There is one thing about Mr. Choquette's store—you know that he handles tires, gasolene and cars, simply by turning half an eye at the building, and a glance inside the window reveals a stock of accessories. Frequently, as in the case of the American tourist cited above, break-downs occurred within a few miles of town, and Farnham now had a man who was equipped to go out and tow these disabled cars back to town, and fix anything from a broken axle to a blow-out.

The stock of tires carried is comparatively small, as the store is within easy reach of Montreal. A telephone message will express a tire into Farnham in a few hours. A dozen tires are stocked, and twice as many inner tubes. Mr. Choquette carries a large stock of other accessories. It is stock that moves quickly in summer. Tires, which are the best sellers, bring a profit of about 15 per cent., while other accessories net in the neighborhood of 33 1-3 per cent. Among new lines recently introduced are self-starters. These do not find favor so much with the farmers as with the townspeople.

(Continued on page 46.)

View in the auto accessary department in the hardware and general store of L. E. Choquette, Farnham, Que.

The above window display by Goodwins Ltd., Montreal, appeared prior to May 24th and seasonable goods suitable for May sports were shown. Among the goods shown are baseball and tennis supplies, lawn bowls, fishing tackle, canoes and row-boats, bicycles, rifles, croquet sets, bicycle lamps, motors, boy scout's equipment, hammocks, etc.

Playing Up a New Department

New Department—Sporting Goods—in Goodwins, Limited., Expanding Rapidly — Some of the Lines Carried — How Goods are Displayed and Sold.

By M. E. MYERS.

I NOTICED an advertisement by Goodwins, Ltd., in a Montreal daily paper one day last week inviting all and sundry to call and see their stock of canoes and skiffs before buying elsewhere. It caught our eye for the very reason that canoes and skiffs seemed out of place in a store which early in the morning is so crowded with women looking for bargains.

On paying a visit to the store, I found a perfect pyramid of canoes in the basement. They had them all on display so that coming down the elevator, they made an immediate striking impression. You could not doubt they carried craft then.

One of the first things I observed on nearing the department was that Goodwins were taking advantage of the national advertising of detachable motors for row boats. There was one already attached so that a man spending his week-ends at Chateauguay, or St. Anne's or Woodlands, or anywhere on the river, might have the microbe inserted right there and then. After tugging at four oars on a flat-bottom boat all my life, the microbe found an easy victim in me.

Since Goodwins opened their first sporting goods department early this year, they claim to have sold more canoes and skiffs than all other dealers in town put together. Another year will see gasolene launches added to their list, and by that time the sporting goods department will have extended over a much larger area. It is the baby department of the store, but it has growing pains at three months old.

Baby department is good, because the sporting goods section is an out-growth of toys and baby carriages, having one manager. They are separated by a short stairway. The buyer is Tom Ireland, formerly of the Shamrocks.

That reminds me that I saw a well-known lacrosse player examining the stock, and when a store gets the leading exponents of sport nosing into show cases, business is not far distant. Another observation I made—that unlike some departments in some department stores, childish girls are not entrusted with the selling. The clerks wear boating costume right through the summer season, making the most confirmed landlubber long to have a paddle in his hands.

Each clerk is interested in some branch of sport. One is a motor boat enthusiast, another is an Isaac Walton, a third is a Scotch soccer player, and another knows the ins and outs of lawn tennis.

Saturday Attractions.

Already Goodwins are supplying several baseball teams with uniforms, and by the way they are going after business, there will be teams of other kinds coming their way this summer. In the early spring and the late fall, a series of Saturday demonstrations have been arranged to draw crowds of sport enthusiasts. They have had a man punching a bag, a fancy roller skater, and there is a bulletin for baseball scores, which is filled in as fast as the news arrives at the Montreal newspaper offices. A large section of the department, which in summer is used for lawn equipment, such as hammocks, gliding settees, swings, etc., is converted into a gymnasium in the winter.

When the summer season is fairly well advanced, Goodwins will clean out their stock of canoes and boats by going direct to the boating clubs. If they can clear out three or six canoes at one time, they will be quite willing to make a price reduction to avoid carrying stock over.

(Continued on page 40.)

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, JUNE 5, 1915 No. 23

LET US all get behind the "Big Broom" and push for bigger sales during June.

* * *

THE RETAIL hardwareman is the logical distributor of sporting goods and motor supplies.

* * *

JUNE WEDDING presents are now in demand. Hardwaremen in many places are securing a good share of the wedding present trade.

* * *

THERE IS ONLY one way to sell household furnishings and that is to display the goods where they can be seen and examined by customers.

* * *

THE FARMERS have money and judging by reports from some of the rural districts they are spending it too. Are you getting your share of the farmer's trade?

* * *

MANY RETAIL merchants fail and are unsuccessful because they over-buy or lack the skill properly to adjust purchases to the selling power of their business or their available capital.

* * *

THERE ARE approximately, 80,000 automobiles in use in Canada. Every car owner is a buyer of auto supplies and hardware. What are you doing to secure the patronage of the autoist?

* * *

IT IS GOOD business for the merchant to always keep the decks clear as far as paying accounts due is concerned. If he includes this among his policies he is going to make himself a better merchant. Every good merchant insists on paying his bills when they fall due, and because of his policy in this respect he insists on getting his own money promptly. This keeps the business on a good, sound basis always, improves his credit standing, and gives him a reputation for straight business dealings among all his associates.

Why Exempt

CAN anyone suggest a reason why the parcel post is exempt from the special war taxes which have been in effect for some time past? A number of retail merchants have complained bitterly about the action of the authorities in exempting "parcel post." It is well known that the large mail order houses are the ones who benefit chiefly from the parcel post system. It is also well known that the mail order houses in Canada wield a mighty influence when problems affecting the distribution of merchandise come up for discussion.

The mail order houses are doing business in every part of Canada, their long arms extend in every direction and each year they secure, over the heads of local merchants, many millions of dollars worth of business. The small town merchant and the village merchant are the chief sufferers from the inroads of mail order competition. The small town merchant and the village merchant help to support the local institutions, they pay taxes, support schools, churches, and help the community generally. The mail order house in the distant city contributes nothing to the support of the local community—does not help to pay taxes, support schools, churches, or find employment for the residents of the town or village. And, yet, the mail order houses are allowed to flood the various communities with catalogues sent through parcels post at a rate that is exceedingly low. The mail order houses also have the benefits of the parcel post in sending goods to all parts of Canada at very low rates. If the "parcel post" is a paying or even self-sustaining proposition, then there is room for argument, but if the parcel post in Canada is a losing proposition, which the people have to support—why should it be exempt from a war tax when it benefits to the greatest extent only a few of the modern octopuses? Can it be that the mail order houses have sufficient power to prevent a tax being imposed on parcels sent through the parcel post? If a special tax had been placed on the "parcel post" the mail order houses would undoubtedly have been the chief contributors. The Postal Department may be able to throw some light on the question. A great many retail merchants would like to know just why parcel post is exempt.

Early Closing

IN our next issue we will publish for the benefit of our good friends, the commercial travelers, a list of towns and cities where weekly half-holidays and early closing are being observed.

Early closing is gaining ground. This fact is convincingly established by the hours under which the largest departmental stores in Canada and many smaller concerns are now operating.

It is gratifying to note that the mercantile body is

becoming convinced that it pays to remain open within reasonable bounds only. The trend noted, however, goes deeper than a mere desire to fix shorter hours. It shows a desire to establish a closer bond between employer and employee, to make the relationship closer for mutual benefit. Shorter hours are not being established from a purely philanthropic standpoint, but as a straight matter of good business. It pays the employer because he gets better service from his sales force during the hours that they are engaged. Long hours do not tend toward a high standard of efficiency in the staff.

Summer Vacations

THOUGHTS are usually turned to the question of summer holidays when the hot weather is ushered in. Now is the time for the merchant, and particularly the one with a large staff, to arrange for the allotment of vacations. Certain members of the staff cannot get away together, and the proprietor himself must be on hand when certain other members are absent. This makes a problem which requires no little attention and should be given consideration early in the hot season.

There are too, a great many merchants who have got the impression that the store cannot get along without them. This, nine times out of ten, is usually erroneous. A vacation once in a while is a tonic which every man should have.

The Markets

HARDWARE markets these days are subject to sudden changes. Many price advances have been predicted by Hardware and Metal during the past few months and in almost every instance the changes have occurred. Many retail hardwaremen have, during the past few months, sent in rush orders as a result of predicted higher prices—and these merchants are now reaping extra profits as a result of keeping a close watch on the market reports. This week the predicted higher prices on galvanized sheets and galvanized wares have gone into effect. Lead, which has remained almost unchanged since the outbreak of the war, has taken a big jump in price this week. As a result of the advance in pig lead, dry white lead has advanced 75 cents per 100 lbs. White lead in oil will probably advance 75 cents per 100 lbs. within the next few days. Sheet lead and lead pipe have advanced this week. Spelter is still soaring and is very scarce. The scarcity and high prices have created serious situations for some manufacturers, and also caused advances in the price of galvanized wares, sheets, etc.

Lead coated sheets are making their appearance on the market. The product is a new and untried one, but it probably will not require a great length of time for possible users to determine the adaptability to their requirements.

Creative Salesmanship.

SOME retail merchants have an idea that they are up against a stone wall, that is, as far as increasing their business to any great extent is concerned. They believe that they are getting pretty near all the business that is available in the community, and they long for a wider field, where they can cultivate more trade—when as a matter of fact they are neglecting opportunities at home. There are many merchants who realize that in order to make money—more than a bare living—they must increase their volume of business but they feel that it is a difficult problem; especially in these days when competition is keen and competitors are wide awake.

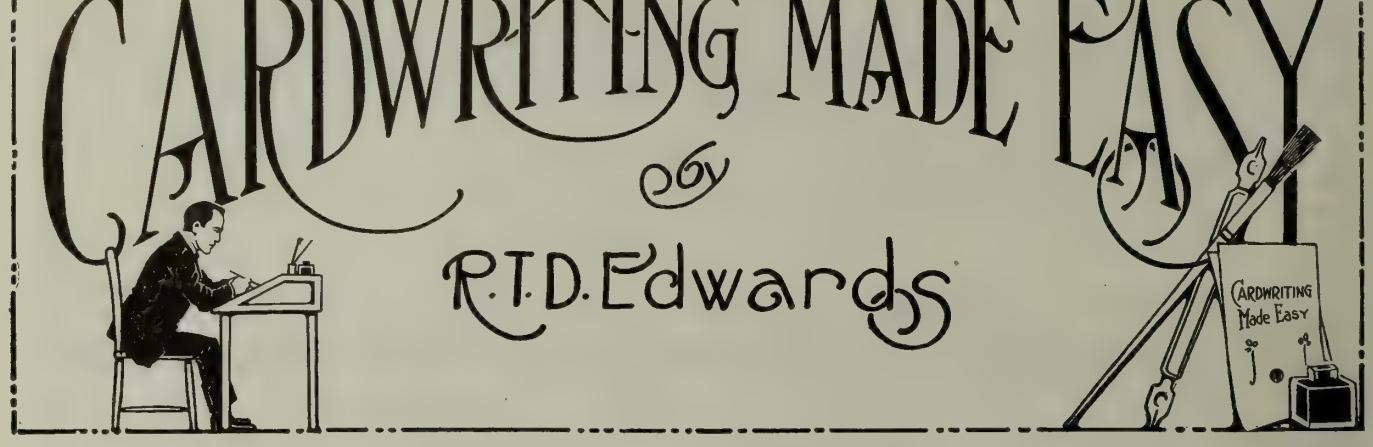
But there is a powerful weapon lying near at hand; right under their nose, if they could only see it. It is not a panacea for all the ills of the hardware merchant's business. Nor an "open sesame" to fortune's gilded doors. But it is mighty near to being both, and it is called "Creative Salesmanship."

With it you can deal sledge-hammer blows to non-success and convert a sickly, anaemic, run-down trade into a healthy, robust, money-making business—and a scarcely-make-profits-meet-expenses sort of business into one that will show a nice fat surplus at the end of the year. To illustrate this an experiment by one retailer will prove interesting. In one day he succeeded in selling, in addition to the regular trade, nine lamp burners of a new style, simply by calling the attention of customers to their superior illuminating qualities and giving a little demonstration with a couple of lamps equipped with the different burners. That was creative salesmanship. None of these customers had the slightest intention of purchasing a lamp burner when they entered the store, yet through the simple power of suggestion coupled with a tactful little display, they had purchased an article which would advertise the store and pay the owner thereof a particular profit.

Right in this lies the psychology of creative salesmanship; the raising of the gross profit without any increase in the expense ratio.

Did it never occur to you that there are many lines of goods upon your shelves (and perhaps many more that you do not carry) that would pay you a splendid profit if you could only sell them? Well, you can if you only think so. Call up your latent powers of salesmanship and go after these lines good and hard. And in addition to the above take a look through this paper and see how many lines of goods are advertised—lines which you may not stock at present but which you could handle to advantage and with considerable profit.

Workmen Earn $20,000,000 Extra.



COL. BERTRAM, Chairman of the Shell Committee, states that the Munition Industry in Canada continues to expand in a most remarkable manner. The number of firms across Canada with orders for shells or component parts is estimated at 300, and the value of the business has been raised to $170,000,000. There are approximately 30,000 workmen being employed. Already 500,000 shells have been shipped and by the middle of June, it is expected that the total output will be raised to 50,000 per day. To the figures mentioned about $30,000,000 could be added as representing the Russian business being handled in this country.

These figures throw considerable light upon one advantage that has come to this country from the war in Europe. Would these men be working if there had been no hostilities? Thirty thousand workmen at say $2 a day, means $60,000 or $360,000 a week. In a year, if the war lasts that long, this many workmen will earn practically $20,000,000, a great portion of which must find its way through retail channels. This is going to be a mighty good thing for the merchants of Canada.

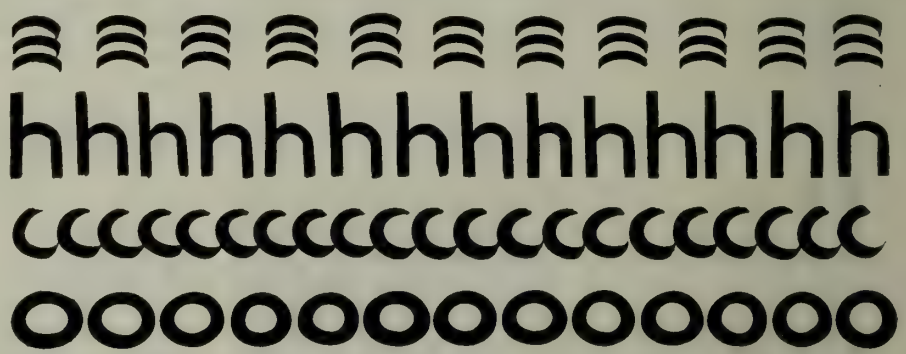
LESSON NO. 6.

AS was stated in previous lessons but will bear repeating, a good layout on a show card is more than half that goes to make the card a success. You may have your letter formation perfect in every detail, but if you have failed to space them properly on the card, then your work goes for little. I have seen many cards that were quickly made but better from a selling point of view than others that took the writer hours, simply because the person who made the "quick" cards knew that to be a successful card writer one must work for "effect," rather than what may be called strict "accuracy."

The prospective customer does not stop and admire a card because it is correct from a drawing point of view. The card is there, first to attract the eye, and secondly to tell the observer about the goods it advertises, and to tell them at first glance.

Remember the show card often decides whether a customer comes into the store or passes by. If the card is difficult to read people are not going to wait to figure out what is on it. They will pass by with the impression that that store is not up-to-date. That means lost business.



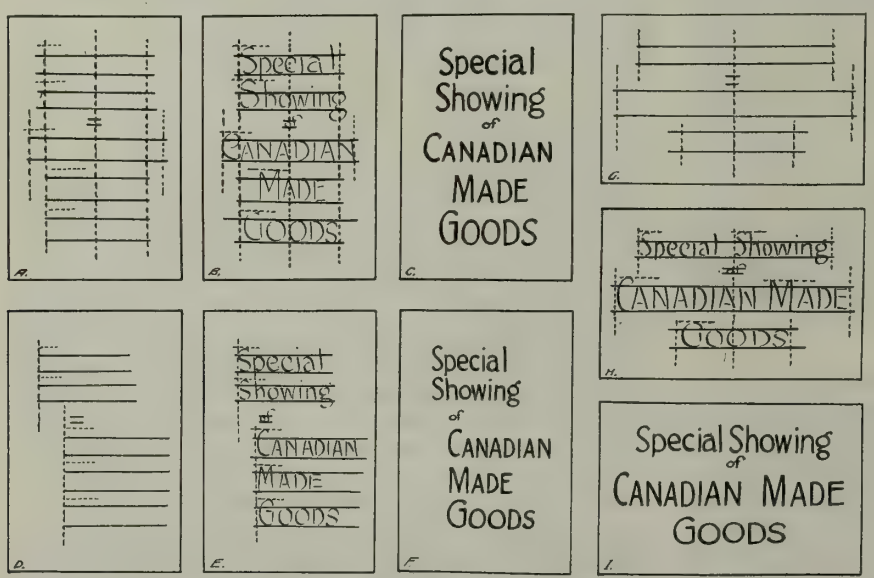


Fig. 1.

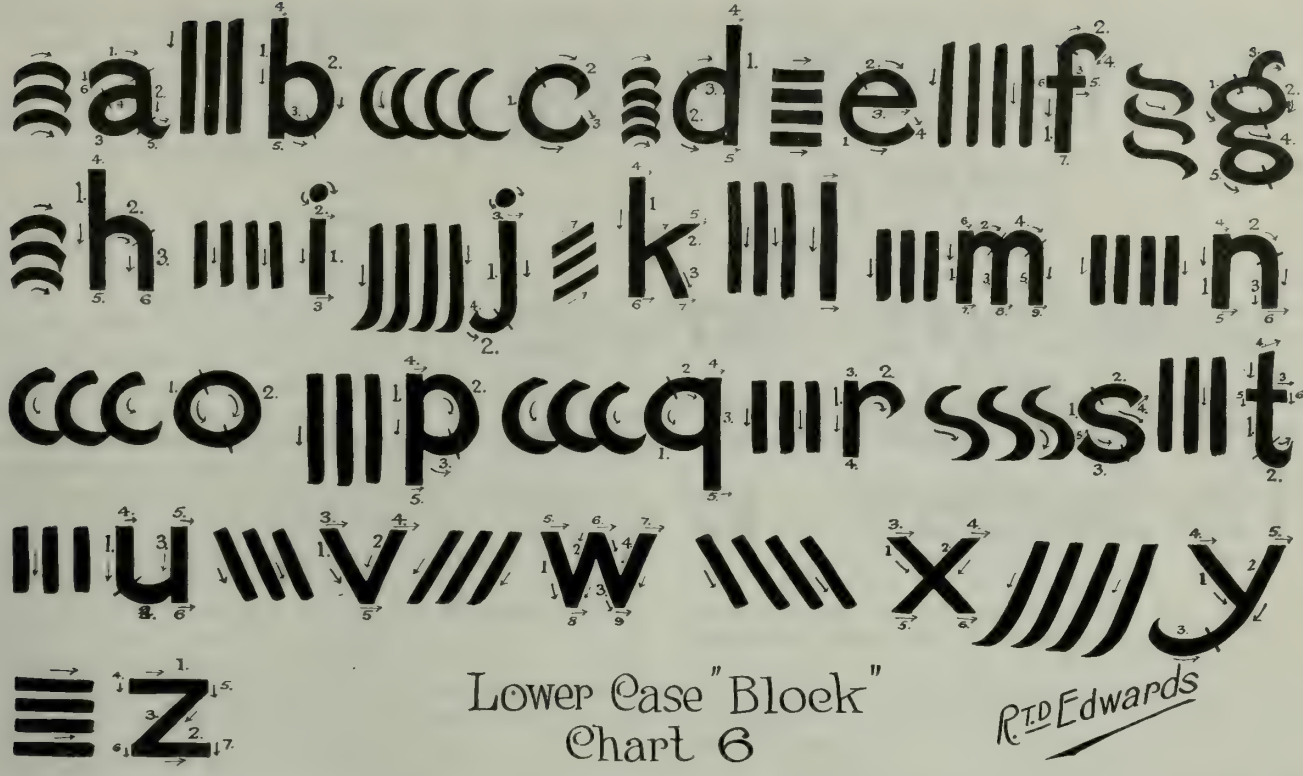
Good Looking and Easily Read.

But, on the other hand, let them be attracted by a nicely worded, well spaced, and well lettered card which can be read at first glance, and they are bound to look at the goods if they are in the least interested, because the show card has told them something that has created a desire for further information.

So, with the purpose of assisting the beginner I have prepared two plates, one of correct spacing and the other of inaccurate spacing. A careful study of these will do you a world of good before you fall into the rut of spacing "any old way."



Correct Method for Spacing

FIG. 2.

Three Styles of Layout.

Stick to straight line spacing for a long time yet. It is the easiest to make and much the easiest to read. In figure 2 I have shown three distinct styles of layouts. The first shows an upright card spaced from the centre. "A" shows how the card should appear after all necessary guide lines are drawn. "B" shows the next step. Here the letters are roughly spaced out so as to serve as a guide for the brush work. "C" shows the finished work with all pencil marks removed.

The next card shows a different style of layout. The lettering is started from straight lines down the left side of the card. This is the easier and quicker of the two layouts and is most popular in card shops.

Lower Case "Block" Chart 6

R. T. D. Edwards

The next style is balanced up from the centre the same as the first but is written on the card landscape style. This gives a chance to put more than one word on each line.

A study of Fig. 3, shows a few of the many errors in layouts which have come under my notice. I think the worst of all is the one with the lettering too large for the card. This seems to be the most glaring one among beginners. They get the idea that it is necessary to cover as much of the white space as possible and lose sight of the fact that it is the white card behind the black that makes the lettering stand out.

Chart 6.

This chart along with the last two charts, known as charts 4 and 5, complete the brush stroke block lettering. All the strokes in these letter formations are made with one stroke of the brush.

The "A" is composed of five main strokes. Make each stroke in the order as numbered and you will get along better than if you went at it haphazard. Practise well every stroke before attempting the full formation of the letter. "B" shows a letter made up of three main strokes; 4 and 5 are the finishing strokes of the ends of stroke one.

"C" is composed of two main strokes and one finishing stroke. The end of stroke two does not need a finishing stroke if the brush is lifted so as to make a straight edge.

"D" has three main strokes. Stroke 3 is illustrated and needs considerable practice. The "E" has a formation similar to that of the "C." Stroke 3 should be parallel with the quick lines but nearer the top than the bottom.

Stroke 1 of "F" should not be made as high as that of the "B" and "D." The curve of stroke 2 brings it up to the top guide line.

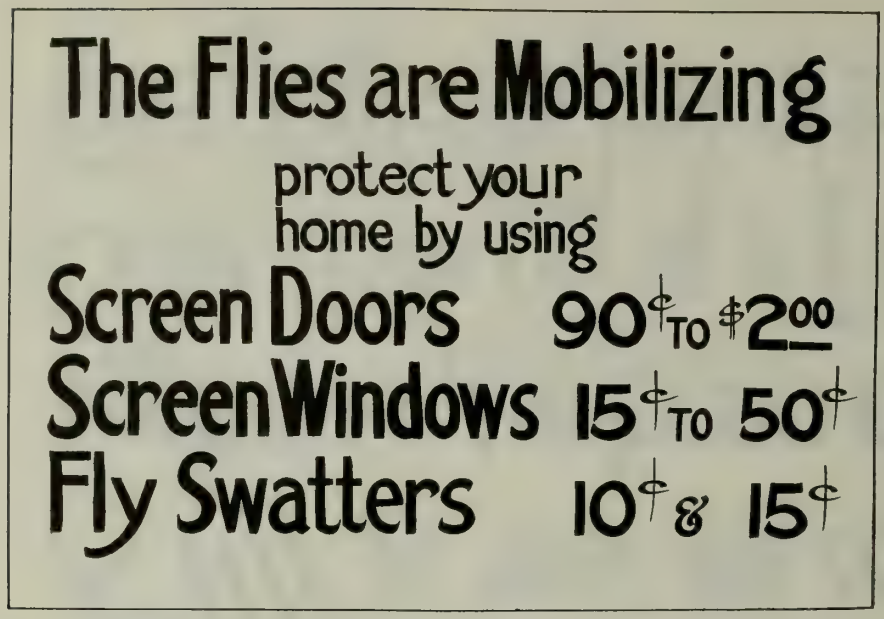
"G" is the all-curve letter. Almost every card writer has a different formation for this letter. This is the one mostly used. This letter should be practised many times. Pay special attention to stroke 4 as shown in the preceding exercise.

Note that the top of stroke 3 of the "H" does not come up to the guide line but meets stroke two, whose curved top just touches the line. The dots over the "I" and "J" are made with two strokes with the side of the brush.

Much practice is needed in order to get the right angles on stroke 2 and 3 of the letter "K."

Don't neglect to practice the "L," it will assist you in the formation of other letters.

The "M" and "N" are of similar formation.



The curved lines require a lot of attention. The "O" is the only two-stroke letter in the alphabet. You cannot practise this too much. Note the strokes used in this letter are the same as those in "P" and "Q."

Stroke 2 of the "R" after a lot of

Examples of Poor Spacing

FIG. 3.

Suggestion for seasonable show card.

practise can be made without using a finishing stroke.

The exercise preceding the "S" is very beneficial in its formation.

Note that the stroke exercise preceding the "T" does not come to the lower guide line. This is to allow the curved tail to rest on the guide line.

The "U" is similar to that of the "N" only reversed.

Practise many times the slant lines of the "V" and "W." See that where the strokes join, the angles are all the same.

Cross strokes 1 and 2 of "X" are as near midway between the guide lines as possible.

The "Z" while it is constituted of straight lines is not always easy to make. Make the upper and lower lines first, then the diagonal.

Wherever possible you will note, I have marked, by small cross bars, where the strokes join. This does not mean that you must lift the brush abruptly at these points, but they are the best places to overlap them. Take much care to keep the joins from showing. Draw the brush in the way indicated by the arrows.

Use the same method for practice work as explained in previous lessons. Practise each letter and exercise as shown in Fig. 1.

The accompanying cards illustrate the use of brush stroke block lettering, taken up in this and the last two lessons.

Suggestion for seasonable show card for use with refrigerator display.

SHOW CASES AS AN INVESTMENT.

THE question of the advisability of spending money on store fixtures and show cases is too often only looked at in one way, that is from the expense side, instead of from the investment standpoint.

As a matter of fact modern up-to-date fixtures and show cases should be looked at from the point of view of an investment only.

There are two ways of buying show cases and fixtures, one to buy as cheaply as possible in which cases the expenditure, no matter how small, is always and only an expense; to invest a specified amount in modern high-class fixtures exactly as you would purchase any other plant, or tools and see to it that a return is derived from the investment.

The old idea of a packing case covered with turkey red as a counter, rough boards nailed against the wall as shelving is exploded and now only indicates out of date business methods. The modern idea of store fixtures is the maximum of display and storage in a design that harmonizes with the class of goods sold or the building they are in, combined with the best possible workmanship to lessen depreciation.

This idea of an investment has been put into dollars and cents by some of the modern retailers and we give actual results of a department in a medium-sized Canadian department store.

Previous to the installation of show cases in this department, the stock was kept in boxes and displayed on overhanging fixtures and counter stands. After the installation of show cases in this department the increases in sales were as follows:

1st week, over average,	26%
2nd " " "	22%
3rd " " "	24½%
4th " " "	26%
5th to 8th week, over average	28%
9 to 10th week, over average,	32½%
11th (Christmas) over aver.	105%
12th to 52nd week, over aver.	42%

The show cases for the entire department were actually paid for in increased profits in four weeks, but figuring at the rate of charging only 10% of the value to each year they showed a profit of about 800% on each year's investment.

PLAYING UP A NEW DEPARTMENT

(Continued from page 35.)

By doing this at the beginning of July, the lower prices are a temptation.

Goodwin's are making a point of giving quick service in their sporting goods department. Business begins promptly at 8.30. That is not the hour for cleaning up; clerks are ready to serve then. This allows a man who wishes to buy some fishing tackle on his way to the office, time to get it comfortably before his office opens.

Adding Motor Accessories.

Already a start has been made with motor accessories. A show case is devoted to lamps, horns, and several other lines. Other accessories will be added as time goes on. Motor boats will make their appearance next year, and guns, ammunition, and other hunters' requisites.

Business is being attracted via the display windows, an example of which is shown in this issue. It will be observed that almost every line of sporting goods in demand for May 24, is represented. This window was followed up by others devoted to separate lines, such as bicycles, fishing tackle, golfing supplies, etc.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—Substitutes for Galvanized Sheets—Courtesy to Salesmen.

Substitutes for Galvanized Sheets

From the American Metal Market.

WHILE so many people are talking of substitutes for galvanized sheets, no one can make any estimate of the extent to which substitution will be practised. Of course in the case of roofing, where large tonnages are consumed and the cost of application is small compared with the cost of the material, there will be a strong tendency to substitute, but there are many lines of consumption in which the cost of the sheets, even were it double what it was six months ago, would represent a small part of the cost of the finished article. Refrigerators may be mentioned as an instance. The ordinary household refrigerator, though it sells for much less when lined with galvanized sheets than when lined with enameled material, sells at prices that would represent dollars and dollars per pound of the galvanized sheets contained.

The trade has paid relatively high prices for galvanized sheets in the past. In the old days when the discount system prevailed, prior to 1904, the list was 17 cents on 28 gauge, and additional discounts beyond 80% off were frequently given, but for years 80% off was a sort of basing point, equivalent to 3.40c, and the market was frequently above 80% off. At the beginning of 1901, just before the Steel Corporation was formed, the market was about 75% off, with some concessions, or somewhat below 4.25c. When Theodore Schaffer, president of the Amalgamated Association, brought his famous strike against the Steel Corporation, in the summer of 1901, priced advanced sharply. The American Sheet Steel Company had obligations beyond the limited tonnage it could turn out, and the independent mills early sold out on contract, whereby for weeks there was no market for anything like prompt shipment except the market from jobbers' stocks. That market was regularly quoted at 65% off, equal to 5.95c. The mills were unable to sell at any such prices as they could not make the deliveries. In some instances, however, we know mills did make sales at as high as 70% off, equal to 5.10c. We have spoken lately to sheet manufacturers who now recall making such sales. There is no doubt that during August and September, 1901, consumers did buy considerable tonnages of galvanized sheets at between five and six cents a pound. No doubt the consumption was materially curtailed, but it was not stopped by any means. There was no recourse to black sheets or painted sheets in that case, for black sheets were as scarce as galvanized; indeed, proportionately scarcer for the galvanized sheet market did not advance as much in percentage as the black sheet market, the spread between black and galvanized only increasing slightly. Spelter averaged less than four cents a pound in 1901.

Courtesy to Salesmen

From Merchants Trade Journal.

A BIG merchant, one who has been in business for over forty years, sat in our office for an hour one day not long ago and told some most interesting and fascinating stories about his success; and one of the most interesting things that he told was of the way he treats travelling salesmen.

This man remarked that during all these years he has never turned a salesman down coldly, though he has been called upon by hundreds of salesmen from whom he has not bought goods. He makes it a point to treat every salesman, who calls upon him, courteously. He almost invariably invites the salesman into his private office and spends a few minutes with him whether he buys goods or not. He endeavors to gain the friendship and the good will of every travelling salesman that comes to him. He aims to send the salesman out of the store a friend.

Incidentally, it seems to pay too, as you may go where you will throughout the great central West, and you will hear this merchant's name spoken by travelling salesmen, and you will also find that these salesmen are that merchant's friends. Many of them have never sold him a dollar's worth of goods, though they have called upon him many times; yet they are not his enemies. This merchant's theory is that good-will is one of the valuable assets in a retail business, and he always tries to gain the good-will of every person with whom he comes in touch, whether that person comes to his store as a customer or as a salesman. He appreciates the good-will of the customers of his store, for he knows the customer who is pleased will go out and advertise his business favorably, and he also appreciates the good-will and the friendship of the travelling salesman who comes to him, because he knows that that salesman will advertise his business favorably in a broader way.

Many a merchant, who does not seem to appreciate this point, wonders, sometimes, why he does not receive more courteous treatment from wholesalers, jobbers and manufacturers, when, if he could see behind the scenes, he would discover that some travelling salesman, whom he had snubbed and turned down coldly, had given an adverse report on his business.

Courtesy does not cost anything, but it is really one of the most valuable things that the retail merchant of this day can possess.

Sales of Bankrupt Stocks

From Dry Goods Review.

SHOULD signs announcing bankrupt sales be allowed? This is a question which the retail merchants of Saskatchewan are discussing to-day and which they have carried to the Government of that province. They want a law passed prohibiting such signs and have asked for legislation covering their request.

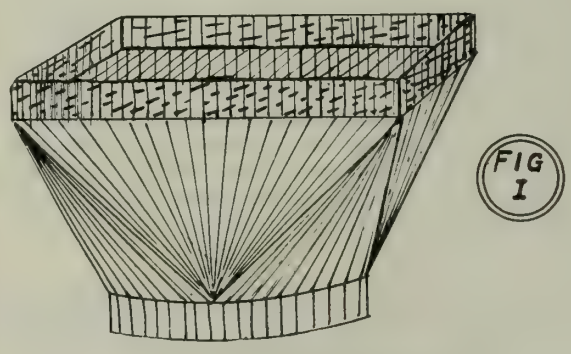
While this may appear to be a radical move, yet there is undoubtedly some reason for it. A bankrupt sale is the legacy a business failure leaves behind. It means that a stock of goods—in most cases—being sacrified in price and this injures the trade of the legitimate retailer who has paid a hundred cents on the dollar for his goods and who is struggling against competition to get his money and a living out of the business. The first thing he knows someone comes along with a bankrupt stock and loads many of his customers up with goods they do not want or which will require a long time to consume. Cash has to be paid for such goods. This means that the legitimate dealer loses trade through no fault of his own and he has to wait longer for much of his money.

Practical Course for Sheet Metal Workers

Article No. 33 of Series

By CHARLES SEIVERS

IN Fig. 1 we show a sketch of what is known as a register box or a round to square. Such fittings are very common to the furnace-maker. The same method is necessary when an ordinary square to round taper piece is required for an extension to a chimney except that the square portion is made to fit the chimney. No matter what length the piece is required, from the round to square, the same method is adopted.



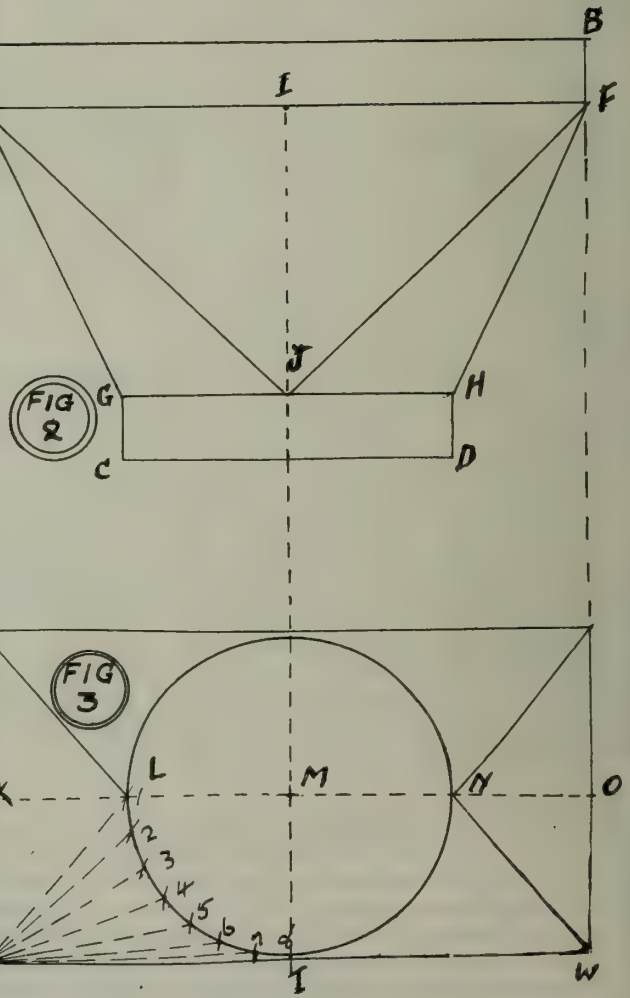
We will now turn to Fig. 2. The outer lines are the actual elevation of the article required. E F G H is the portion which is to be square to round. A B C D are simply the collars. Having determined the sizes, make the plan as aforementioned which is really a series of angles. Now erect a vertical dotted line I J and draw dotted lines from E J and F J; then extend dotted lines, or transfer the same measurements as shown in Fig. 3.

Taking M as centre, place compass at J in Fig. 2, and open up to G, this being the diameter of the round portion. Then make circle as shown, or half this pattern will do, but by drawing the whole as shown, one can see both views in Figures 2 and 3. Next divide the arc as shown, after erecting the various angles, and be sure to have the portions very accurate, as shown in P 1, 2, 3, 4, 5, 6, 7, 8. These lines represent the various angles required as well as the height from I J and G E. We will now turn to Fig. 4.

Draw a horizontal line R S; then place the point of compass at P, Fig. 3, and open up to 8. Transfer this to R and form R 8; then repeat with P 7, again transferring this measurement to R 7, and so on until all have been transferred. Then from R erect a vertical line equal in height to J I in Fig. 3. Next draw a series of angles as shown T 3, T 4, T 2, T 5, T 1, T 6, T 7, T 8, Fig. 4. These represent the actual length of the lines in Fig. 3, P 1, 2, 3, 4, 5, 6, 7, 8, which is really only the quarter pattern.

We will now turn to Fig. 5. Using E as centre and with radii equal to the various lines shown in Fig. 4, from T 1 to 8 transfer them to Fig. 5 in small arcs. Next open the compass and mark off these arcs with the spaces on quarter circle, P 1, 2, 3, etc., to 8 in Fig. 3. This completes the stretch-out. Next using L in Fig. 5 as centre and E G in Fig. 2 as

(Continued on page 52.)



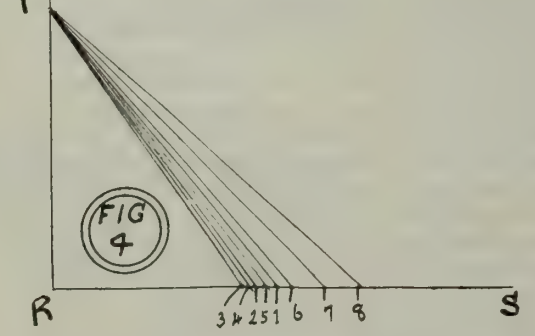


PLATE 33.

New Hardware Goods

Offered Canadian Hardwaremen

ACORN STORM PROOF LANTERN.

The Acorn Brass Mfg. Co., No. 426 So. Clinton street, Chicago, Ill., are introducing to the trade their Storm Proof Gasoline Lantern, which they claim is "wind, bug and dust proof as well; is made to stand hard knocks and will burn continuously for fifteen hours with one filling." They recommend it especially to farmers, dairymen, watchmen, livery barns, garages, storekeepers, campers,

Acorn Storm-proof Lanterns.

hunters, summer resorts, in fact to anyone for outdoor or indoor lighting. The makers claim that, "it can be knocked over or rolled on the floor without danger and always develops the highest candle power light at lowest fuel consumption." The accompanying illustration gives a fair idea of its construction, weighs four and one-half pounds, filled; height, thirteen inches; capacity one quart; packed for shipping weighs five pounds. The manufacturers invite correspondence and will ship a sample on fifteen days' trial to responsible dealer.

MOTOR LUNCHEON SETS.

Landers, Frary & Clark, New Britain, Conn., are offering to the trade three new "Universal" motor luncheon sets; two of which are here illustrated. Fig. 1 shows the Universal Motor Combination Case. The makers claim that this is a handsome durable case, dovetailed corners, covered with heavy black grain dull finish enameled cloth. Holds two quart bottles and two lunch boxes and set of four drinking cups with detachable handles. The case has heavy sole leather corners, leather handle, green leatherol lining, nickel plated brass lock and bolts.

Fig. 2 shows the Universal Motor luncheon set. This is claimed to be a very fine combination set for the most critical trade. Completely equipped for two, four, or six persons. Each fitting is high grade in every particular—material, workmanship and design. Cases dovetailed on all sides and covered with fine black grained enameled duck. Linings of dark green leatherol. Best quality solid brass spring catch locks nickel plated. The set is equipped with Universal vacuum bottles, Universal vacuum butter jar, food boxes, plates, knives, forks, spoons, napkins, sugar or preserve jars, salt and pepper shakers, nested drinking cups, etc.

The firm has also produced a running board luncheon set. This set is also claimed to be very complete and compact.

These sets are most complete, very compact and extremely handsome. The trunk is exceptionally strong and well made of wood with dovetailed corners. The covering is a dull black grain heavy enamel duck. The method of construction makes the case perfectly dust proof and rain proof. All outside trimmings are nickel plated. Special type of flat key lock is used. There is a strap on each end with footmens' loops for fastening to running board or trunk rack and handles for carrying.

The No. 442 set is equipped with two No 82 quart size "Universal" vacuum bottles, one No. 800 "Universal" vacuum butter jar, two food boxes, four plates, four linen napkins, one silver plated table spoon, four silver plated tea

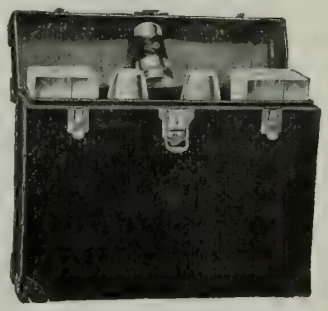

Fig. 1—Universal Combination Set.

spoons, four silver plated knives, four silver plated forks, two jars for sugar and preserves, one salt shaker, one pepper shaker and set of No. 364 drinking cups with detachable handles. This set is also supplied for six persons under No. 462. The company has issued a

Fig. 2—Universal Motor Luncheon Sets.

special catalogue describing the new lines and will mail copies on request.

Getting the women buyers' trade simply means studying local conditions. It is not always necessary to compete with the furniture dealer, but there are a number of items in the house furnishing line which really belong to the hardware dealer and which many are not selling at the present time.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

New Firms.

Carroll, Man.—A partnership has been registered between McInness & Abell, hardware and implements.

Business Changes.

Winnipeg, Man.—Estate of J. Berntal, hardware, has been sold to J. A. Chmelnitsky.

Toronto, Ont.—The hardware stock of G. A. Wells has been sold to Boyd & Leslie.

Obituary.

James B. Soper, proprietor of the Neyle Hardware Co., Ltd., St. John's, Nfld., was accidently drowned recently while on a fishing excursion at a suburban lake. The accident was caused by the capsizing of his boat, and his friends on shore could render no aid. Mr. Soper was exceedingly popular and his death is regretted.

Enlarging Factory.

The Stevens-Hepner Co., Pt. Elgin, Ont., manufacturers of brushes, brooms, etc., are adding to their present plant two floors each 100 x 51 square feet. When the firm started business in 1896, they occupied a floor space of 11,256 sq. feet. The growth of the firm's business has necessitated extensions from time to time until now 80,000 sq. feet of space is in use. The firm recently secured an order for 90.000 brushes from the War Office.

Will Return to Canada.

Toronto, Ont.—Lieut. J. Murray McKinlay, of the fourth battalion, who was wounded during the Battle of Langemarck, has been granted leave of absence to recuperate, and will return to Canada for a brief visit. Lieut. McKinlay's regiment is the 20th Halton Rifles, with headquarters at Georgetown, and he was employed as a traveler for the Toronto Plate Glass Company before leaving for the front.

Canadian Stoves in China.

As indicating the possibilities along certain lines of trade, the case of Canadian stoves may be instanced. A Canadian make of stove was introduced some years ago by a Canadian missionary, who imported the same for his own use. The excellence and cheapness of this stove so commended itself that it has been bought by many of the foreigners living in the district, and at present the majority of the missionaries' homes in Wuchang have Canadian heating stoves.—Weekly Report, Department of Trade and Commerce, Canada.

Address on Paint and Varnish Making.

About fifty Toronto retail hardware merchants and retail salesmen gathered at the Lowe Brothers, Ltd., paint and varnish plant, Sorauren avenue, Toronto, on Wednesday evening of this week to hear an address by F. J. Penberthy, manager of Lowe Brothers, Ltd., on the science of paint and varnish making. The address was illustrated by lantern views. Mr. Penberthy described in detail the various phases of paint making from the process of securing the raw material to the placing of the finished product in the cans ready for sale. The process of making dry paint colors was fully explained and with the aid of the lantern views much of the machinery used in this process was shown. The manufacture of white lead, linseed oil, varnish-making and other products were gone into in a very thorough manner. The address proved very educative and interesting to the hardwaremen present. Following the address, refreshments were served.

Deloraine, Man., Mar. 13, 1915.

MacLean Publishing Co., Ltd.,
Toronto, Ontario.

Gentlemen,—Please find order enclosed for $2, being subscription to Hardware and Metal from Feb. 28, 1915 to Feb. 28, 1916. I find many useful hints in Hardware and Metal, and consider it money well spent.

Yours truly,
E. C. Arthan.

Ontario Incorporations.

Canadian Toy and Novelty Co., Ltd., capitalized at $40,000, head office Toronto, to manufacture and deal in toys, etc.

The Paint Manufacturers' Safety Association, head office Toronto, to promote and carry on the work of prevention of accidents in the manufacture of paint and other industry, which may be for the time being and from time to time assessable by the Workmen's Compensation Board in the same insurance group as the manufacturers of paint, and generally to represent employers and employees engaged in such industries in connection with the Workmen's Compensation Act. The provisional directors are J. W. Corcoran, Toronto; F. E. Lyman, Toronto; Frederick Chalcraft, Brantford; F. W. Meek, Oakville, Ont.; Howard Everett, Hamilton, Ont.

British Souvenir Spoon Co., Ltd., capitalized at $25,000, head office Toronto, to engage in the business of merchants, manufacturers and dealers in all kinds of silverware, silver-plated ware and cutlery.

Dominion Incorporations.

Consumers' Gasoline Supply Co., Ltd., capitalized at $50,000, head office Toronto, to produce, manufacture and deal in petroleum, natural gas, and oil of all kinds.

Spartan Machine Company, Limited, capitalized at $50,000, head office Montreal, to manufacture, buy, sell, import and deal in all kinds of goods, especially hardware, plant machinery, tools, railway cars, etc.

Aetna Chemical Company, of Canada, Ltd., capitalized at $1,800,000, head office Montreal, to buy, sell, manufacturer, and deal in gun cotton, cordite, lyddite, turpinite and other explosive powders, etc.

Tupper Fire Escape Co., Ltd., capitalized at $100,000, head office Sherbrooke, Que., to manufacture and deal in fire escapes and safety appliances.

United Specialties Mfg. Co., Ltd., capitalized at $50,000, head office Montreal, to take over the business heretofore carried on by the United Specialties Mfg. Co., Montreal, and to manufacture, import, export, and deal in iron, steel, metals, etc.

Miller Rubber Co., of Canada, Ltd., capitalized at $50,000, head office Toronto, to manufacture and deal in articles composed of rubber.

HARDWARE LETTER BOX

Self-Generating Bicycle Lamps.

Gerry Bros., Fort William, Ont.—Can you give names of any firms making a self-generating bicycle lamp?

Hyslop Bros., Limited, 12 Shuter St., Toronto, Ont.; Siche Gas Co., 10 Lombard Street, Toronto, Ont.—Ed.

Joy Malleable Range.

Chown Hardware, Limited, Edmonton, Alta.—We will be obliged if you will give us the address of the manufacturer of the Joy malleable range, also if there is a Western jobber handling it.

This stove is made by the Canadian Heating and Ventilating Co., Owen Sound, Ont., and their Western representative is E. A. Irving, 526 Henry Avenue, Winnipeg, Man.—Ed.

Steel Wool.

Thompson & Sutherland, Ltd., New Glasgow, N.S.—Please give us the names of manufacturers of steel wool.

American Steel Wool Mfg. Co., Greenwich Street, New York City; American Steel and Wire Co., Pittsburg, Pa.—Ed.

Davis Bench Wringer.

Bernhardt & Spalding, Preston, Ont.—Please advise through your paper where we can get rubber rollers for the Davis bench wringer.

Can any of our readers supply this information?—Ed.

Steel Flag Poles.

Moore Hardware Co., Limited, St. Catharines, Ont.—Will you kindly advise us where we can secure a steel flag pole 60 to 70 feet high?

Stratford Bridge & Iron Works, Stratford, Ont.; Ontario Wind Engine & Pump Co., Limited, Toronto, Ont.; Goold Shapley & Muir Co., Brantford, Ont.; Dennis Wire & Iron Works, London, Ont.—Ed.

Gun Metal Bull Rings.

S. E. Eakins, Millbrook, Ont.—Kindly let me know who manufactures gun metal bull rings, 2½ in. by ⅜ in.

Sargent & Co., New Haven, Conn.—Ed.

Waste Paper and Waste Paper Balers.

The Keewatin Hardware Co., Keewatin, Ont.—Will you be good enough to let us know of any firms who buy waste paper and sell paper balers?

The following firms buy waste paper: E. Pullan, Adelaide and Maude Streets, Toronto, Ont.; the Levi's, 100 John St., Toronto, Ont.; J. R. Walker & Co., Montreal, Que.; the Davenport Mfg. Co., of Davenport, Iowa; Buckeye Baler Co., Findley, Ohio; Stephenson & Blake, 62 Front Street East, Toronto, Ont. Paper balers are made and sold by the following firms: Climax Baler Co., Hamilton, Ont.; Page Wire Fence Co., Walkerville, Ont.; Shea Sales Co., Montreal, Que.—Ed.

CATALOGUES AND BOOKLETS

Fishing Tackle Catalogue.

South Bend Bait Co., South Bend, Ind., have issued an exceptionally attractive and well illustrated catalogue (No. 21), consisting of 48 pages, and featuring an extensive line of "Quality Fishing Tackle." A large number of excellent half-tone illustrations have been used to feature the many products of the company. Complete descriptions, dimensions, etc., with list price, are given for each article. The South Bend Bait Company will gladly send upon request to dealers or jobbers copies of the catalogue.

Barton-Netting Co. Text Book.

The Barton-Netting Co., Ltd., Windsor, have just issued a very valuable and interesting text book on the construction of fireplaces. A great many questions, which are a puzzle to many people, regarding chimney and fireplace construction, the setting of mantels, size to build, flues, installation of electric mantels, etc., are answered in the text-book. The Barton-Netting Company give in the text-book a great deal of valuable and practical information which they have gained during the many years in the business. The book consists of 59 pages, and in addition to giving a great deal of information regarding the proper installation of fireplaces, etc., shows the various products manufactured by the firm. Among other lines the following are illustrated and described: Coal grates, gas grates, electric heating grates, portable baskets, spark guards, folding screens, nursery fenders, andirons, fire-sets, gas logs, gas distributors, etc.

Portable Steel Buildings.

The C. D. Pruden Co., Baltimore, Md., recently issued a handsome loose-leaf catalogue featuring their various lines of Prudential steel buildings, including garages, cottages, bunk-houses, summer cottages, barns, contractors' buildings, etc.

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

BANKRUPT SALES.

Editor, Hardware and Metal,
Toronto.

One of the big evils which undermines the success of the honest retailer is the grave, unfair competition of bankrupt sales which are being continually thrown upon the market sold at slaughter prices to the injury of every other dealer in the community where such a stock is offered for sale.

Every retail merchant doing an honest business deserves protection from such wholesale slaughter of prices, and against the unscrupulous opposition of reckless men with very little reputation they care for and care less for the pockets of their creditors.

The joint action of wholesale jobbers could easily put a stop to very much of this kind of evil if such jobbers would agree to take back and put into their own warehouse a proportion of the stock and re-sell at bargain prices (if necessary) to their own customers who are striving to do business honestly and pay their creditors one hundred cents on the dollar, such a course on the part of the jobbers would save to the trade the curse and demoralization that always accompany bankrupt sales.

In our province of Saskatchewan we are just now suffering heavily from this evil of cost sales. In a Western city of less than 20,000 population there are no less than eight hardware stores. A firm of wholesale (?) jobbers in a neighboring city are the reputed owners of one of these hardware stocks. For some reason best known to themselves they have decided to close up this branch and by newspaper publicity are offering to sell retail at cost. In addition they are engaged shipping other surplus stock to be put into this cost sale. Such a proceeding on their part goes to show the very low standards which they, as a jobbing firm, are setting for the trade and deserves the censure of all honest retailers.

If retailers throughout the Dominion would unite and send a vigorous protest to all wholesalers, a remedy for such a state of affairs might easily be found.

An able writer could find unrefutable arguments to support the cause and bring about the much-needed reform and remove the cancerous growth that has fastened itself upon all fair business.

This is a subject of vital interest and deserves prominence in all "retail associations."

"JUSTICE."

Junior Clerk's Page

WHAT ARE YOU?

AHEAD of each of us is old age—and there is the old age of dignity, independence and happiness; the old age of beautiful memories, when all the foolish fires of youth have died out, when regretted mistakes and faults are forgotten.

And again there is the old age of poverty, shame and sorrow. Young men and young women as well, saturate their minds with drivel, tweedle, and gossip and vanity. The things of least importance are the things to which we give greatest concern. Things of least consequence are the ones about which we become most perturbed.

On the reading table of the average individual you find the demi-tasse of the literary world, the trash which has emanated from the mind of an idler possessing a third-rate imagination, who has never produced anything of importance, and whose literary gift consists of trivialities, touched with a color of suggestion.

The average young man starts out in life with the idea of being "a sport," and the young man of this type is often envied, just as many young men in college look with curious and envious eyes upon one of their class-mates who has arrived, equipped with a bull-pup, a pair of white trousers and an automobile. Fate has played such a young man a cruel trick.

Everywhere we see young men with the fire and dash of youth, listening to vulgar conversations and repeating racy stories—and these things can only steal away the beauty and usefulness of the mind; and the man whose mind is right, whose mind is clean will weather the flotsam and jetsam of life and come out right in the end.

The cafes of our cities are crowded with young men who are spending money for wine that should be spent for laundry. Near the end of the week these young men are just a little in debt, and borrow a few dollars from a friend, to be paid back on Saturday—and the rest of it is the same old story we have heard in every generation through all the years that have been. The story of broken promises, unpaid obligations and the gradual fading away of self-respect.

The benefit that comes from economy does not lie particularly in the money saved, but in the habits formed as a result of this systematic care of the earnings of our labor.

There is in reality not any particular injury in being foolish, but the injury lies in the time wasted, in the fact that we are not systematizing our conduct. If you have wondered why you have not accomplished what you had planned to accomplish, it might be well to retrace the weeks and years, and study the manner in which you have spent your evenings; reflect on the books you have read and on the nature of your recreation.

We all desire health, but most of us do not care to avoid the dissipation which brings disease and sorrow. We all desire money, but a great many of us do not cherish the idea of earning it.

Oh, you pay the cost, and there is no way of changing the fact that you are just what you are. If you have made your preparation, if you have constantly held in mind the thing you intended to do, it is only a matter of time until you approach the dawn.

* * *

CARTRIDGE FIGURES PUZZLE JUNIOR SALESMEN.

The novice in the gun and ammunition department these days will have his head turning in two or three directions at the same time if he attempts to figure out all of the numbers applying to cartridges.

Cartridges are comparatively new. The old style powder, cap and ball rifle was in its glory until the late 70's when it gave way to the cartridges of the bottle neck type. The calibres of ammunition as the new beginner will learn are reckoned by the 100 parts of an inch of diameter. Thus the 22 is 22-100 of an inch; the 30-30 a little less than one-third of an inch, the second number used to indicate the number of grains of black powder. The 30-30, however, is an exception since the second 30 originally denoted the number of grains of smokeless powder used. Another exception is found in the 30-220, where the second number indicates the number of grains of lead; also called the 30-40, in which the 40 refers to the number of grains of powder. Now comes another, the 250-3000 Savage, the 3000 indicating the velocity of the bullet in feet per second.

In shot guns, states the Sporting Goods Dealer, the gauges originally signified the number of lead pellets of a diameter which would weigh one pound, such as 10, 12, 16 and 20. The ball in the present 12-gauge shell weighs one ounce and you may say that the balls now furnished in 12-gauge shells weigh one ounce each, and therefore are 16-gauge balls, but the difference will be found in that the present day ball must be made to pass a full choke bore barrel of a 12, which in reality is only 16.

The young man who is just beginning as a sporting goods salesman will do well to read everything he can find on guns and ammunition. The sporting goods field is a broad one, and while the youth may be inclined to stick close to the athletic goods he will find in later years that his services will be in greater demand if he is in a position to fit well at the arms and ammunition cases.

SOLD CARS TO FARMERS.

(Continued from page 34.)

Three years ago, the Ford agency for the district was secured. At that time there were only about six or seven cars in town, and the field was ripe. Mr. Choquette saw that if he was to make a success of accessories, he must create a demand by selling cars in the district. Farmers were the best prospects, especially during the summer months. The farmer requires to be gone after, and canvassed thoroughly, but as a rule it is not difficult to sell a car to a farmer if the salesman has the right selling arguments. Mr. Choquette often closes a deal inside of a day, sometimes two days, and his terms are cash. He disposed of twenty-two Fords last year, and has already sold fourteen this year. As the commission is a good one, this should be a splendid side line, apart from the fact that this business brings further revenue, as each customer for a car becomes a buyer of accessories for years to come.

During the five years he has handled this line, Mr. Choquette as well as his two sons, have acquired sufficient knowledge of automobiles to be able to handle any repair job, but he still retains the service of the machinist who helped to make the business successful in the early days.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

Many sudden, though not unexpected price changes have taken place during the week. Owing to the scarcity and high price of spelter the price of galvanized sheets, galvanized wares and other products into which spelter enters have advanced considerably. Lead, which began to advance last week after remaining practically unchanged since the outbreak of war, has shown further advances, and thus forced up prices on lead pipe, sheets, etc. As stated in previous reports, lead has been very low when the prices of other metals are considered, and the further advance was not unexpected. Dry white lead has advanced 75 cents per 100 lbs. and this will be followed by an almost immediate advance in white lead in oil. Antimony and spelter are very scarce and purchases are being made at prices that break all previous records. Business during the week was rather quiet, but with the advent of warmer weather, business will be greatly stimulated.

Montreal

MONTREAL, June 3.—Conditions in the hardware trade continue much as they have been for several weeks. On the one hand, is the continued activity in country districts, which brings the May showing considerably ahead of a year ago, and on the other hand, is the dullness in the city trade—and the falling off in the urban business more than makes up for the gain in the rural. Some slight improvement has been noted in the demand for some of the cheaper lines of builders' hardware, but this has been so small, and the situation has been so dull, that it counts for little, and the trade has prepared itself for a dull season in these lines and the other departments which depend upon industrial activity and construction programmes. However, the general cheerfulness of dealers would lead to the assumption that on big business the profits are so close that the loss is not relatively so important, while in some general lines, where the retailer has been buying from the manufacturer, he is now catering to a curtailed demand and finds it more satisfactory to work with smaller profits and buy short lots from the jobber.

Warmer weather has started a brisk re-ordering of lawn and garden goods and active sorting with stimulated interest in harvest tools. There is a better demand also for cutlery for the June wedding trade. In the heavier goods the situation continues slow and practically unchanged.

The metals provide the centre of attraction, as they have for some time past. Spelter continues to paralyze the market by its continued advances, and antimony is bought where and at what prices it can be had. The latest addition to the active list is lead, which on the recent movement has advanced $14 a ton on the other side. The situation is critical for all galvanized lines, and there are further advances for sheets, buckets, tubs, etc. And there are further advances in sight for the immediate future if the market continues on its present basis. In fact, so far as galvanized ware is concerned there is a possibility that it will be squeezed out of the market to a certain extent by being raised beyond the basis of a commercial commodity. Copper products are also very firm, and lead products are materially advanced.

The Metals.—The continued advances in spelter market and the action of lead, in following in the train of the other metals, brings the trade face to face with a serious situation. It is predicted that tin will again ascend to higher levels as the result of the influence of the other metals. Prices are such that manufacturers can see many lines which have been regarded as standard being eliminated from the market on account of the cost of production becoming too great.

Tin.—The local quotation for tin has been reduced further, and is now given at 46c-47c. This is still high in comparison with the New York quotation of 38c. However, the local market is firm, and opinion prevails that the influence of the activity of spelter and lead will be to take tin up again. New York has been up and down within the week, and at writing had declined to the level of last report. This easiness came on London influence, and was regarded with considerable surprise, the opinion being that it was the result of manipulation, and that when the situation was rightly analyzed it would be shown that the war has worked a change in the relation of the two markets which makes the basis on this side of the Atlantic less susceptible to the influence of the British metropolis.

Copper.—The copper quotation has remained steady during the week, but very firm, while products, influenced by the continued high position of raw material, showed a very stiff tone. New York reports prices a shade higher than a week ago with the market quiet on last advices, although there is a little more interest on the part of domestic manufacturers. The future there is regarded with optimism, and war orders and the talk of war orders has become very powerful in influencing opinion, the trade being thoroughly excited over what happened to spelter and antimony. Copper has already shown a great advance, but the situation is regarded as being altogether sound, and lower values

MONTREAL QUOTATIONS.

Tin	46c-47c
Spelter	26c-26½c
Copper	21c
Lead	6c-6¼c
Antimony	40c
Solder, ½ x ½	25c-29c
Solder "strictly"	28 to 32c
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

For quotations on other hardware goods see weekly report and current quotations.

are not in sight while the present conditions continue.

Spelter.—There appears to be no limit to the heights which spelter may attain. Last week's level of 21c and 21¼c has been raised to 26c and 26½c, and this does not appear to be the top. Manufacturers are acting in sympathy, and further advances have been made for galvanized ware and sheets, while pipe is very firm. New York records advances of 3c to 5c for the week, and states that the market is in a worse condition than ever; in fact, it is regarded as being so serious as to be almost beyond exaggeration. Quotations even at the new high levels are stated to be little better than nominal with buyers scrambling for small lots at fancy advances. A price level of 25c to 30c is regarded as a possibility.

Lead.—Lead has joined the procession started by tin and followed by copper, spelter and antimony. The local quotation has been advanced to 6¾c and 7c, and New York reports gains of $14 the ton on the movement. Lead products have gone up in sympathy. The market seems to have at last taken recognition of the cheapness of lead as compared with other war metals and things that have happened. Further advances are being looked for, and it is expected that the upward influence will soon be felt by tin.

Sheet Lead.—With the advance in lead, lead products have been materially advanced. Sheets are up 75c all round, the following quotations being given:

Sheets, 2½-lb. sq. foot	$8.25
Sheets, 3-lb. sq. foot	8.00
Sheets, 3½-lb. sq. foot	7.75
Sheets, 4-6 lbs. sq. foot	7.50

Lead Pipe.—Lead pipe has also been advanced 1c lb. The prices now quoted are 9c for lead pipe and 10c for lead waste pipe. This, of course, is the direct influence of the advancing lead market.

Sheet Zinc.—The market for sheet zinc is only nominal. Quotations are advanced to 26c for casks and 27c for part casks, but these figures do not represent the top of the market, as high as 30c being heard. Contrasting such prices with a cost of 7c or 8c before the war gives some idea of where the market has gone to.

Solder.—The solder situation has changed but little, although for the time being the quotations are tending lower within the range in sympathy with tin, but as higher prices are looked for in the latter market, solder is likely to firm up again before long. The range is 25c to 29c for half-and-half, and 28c to 32c for strictly.

Antimony.—The local quotation for antimony is advanced from 36c to 40c, but any figure is purely nominal and little guide to the real market. Purchases are made where and at what price they can be negotiated, and about the only guide is the New York market of 34c to 35c for Chinese and Japanese, with practically all the leading European lines out of the list.

Sheets and Plates.—The higher prices for spelter have had an immediate effect on prices of sheets, which have advanced 25c all round, while plates are very stiff and likely to be increased at any time. Still further advances in the near future are a probability unless spelter eases—and there is little indication of that. Quotations now are:

Queen's Head and Gorbals Best Best—	
16-20 gauge	$4.55
22-24	4.75
26	5.00
28	5.25
Fleur-de-lis and Colborne Crown—	
16-20 gauge	$4.30
22-24	4.55
26	4.80
28	5.05
Apollo—	
14 gauge	$4.05
16	4.05
18-20	4.25
22-24	4.35
26	4.45
28	4.95
10¾ oz.	5.15

Pipe.—The situation as regards galvanized pipe is very firm, and there are further advances to be anticipated in the near future. Quotations for black are also firm. The following prices of the Hardware Association for small business are firmer on the strength of the market:

Per 100 feet.	Black.	Galvanized.
¼ and ⅜ in.	$2.39	$3.54
½ in.	2.86	4.21
¾ in.	3.27	5.08
1 in.	4.83	7.52
1¼ in.	6.54	10.17
1½ in.	7.82	12.16
2 in.	10.53	16.36
2½ in.	16.63	25.86
3 in.	21.75	33.82
3½ in.	26.14	40.67
4 in.	30.98	48.19

Galvanized Ware.—Increases in the quotations for galvanized ware of about 10 per cent. have been made, and it is stated that these will be followed by others in the course of a couple of weeks, and that there is a possibility that continued advance of spelter will have the effect of squeezing these goods out of the market to a large extent in favor of utensils of other material.

Following discounts now prevail:—Dufferin pattern pails, 20 per cent. and 10 per cent., instead of 30 per cent. and 10 per cent.; English pattern pails, 20 per cent. and 10 per cent., instead of 30 per cent. and 10 per cent.; galvanized wash tubs, 20 per cent. and 10 per cent., instead of 30 per cent. and 10 per cent.; other lines, 20 per cent., instead of 30 per cent.

Copper Rivets.—The prices on copper rivets and other copper products are very firm, and advances all round are to be expected. The market for raw material holds firm, and costs are steadily mounting as the proportion of costly material going into manufacture increases with the exhaustion of old supplies.

Screws and Bolts.—The advances in the prices of brass wire are almost certain to affect the quotations on brass screws in the near future. The market is, therefore, very firm for the present.

Bar Iron and Steel.—The market for bar iron and steel continues steady, with only a small demand. Quotations for bar iron are $2, with 5c off on car orders.

Nails, Fencing, etc.—The demand continues very fair for fencing, and, in fact, better than had been expected, considering the heavy booking deliveries made in the spring. Deliveries of nails are very fair to the country, but buying is light owing to the fact that the most of the business is being done on orders booked before the last advance and at lower prices than those at present quoted.

Builders' Hardware and Materials.—A little better demand is noted for builders' hardware and materials, but the market has been so slow that the improvement is not very important. Final adjustments as to price lists on hardware are still being awaited, but should be received in the course of a few days.

Cutlery.—A satisfactory movement of cutlery is noted, the June weddings evidently being an important influence with the public.

Stoves.—Warmer weather is expected to quicken the demand for gas and oil

TORONTO QUOTATIONS.

Tin	42c
Copper	21c
Spelter	30c
Lead	6¼c
Antimony	40c
Aluminum Ingot	26c
Aluminum Pattern	25c lb.
Solder, ½ x ½	27c lb.
Wire Solder	33c lb.
Wiping Solder	23c lb.
Tinker's Bar Solder	29c lb.
Wire Nails	$2.35 base
Cut Nails	$2.70 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp Rope	13c base
Sisal Rope	10½c base

For quotations on other hardware lines see weekly report and current quotations.

stoves, following a quiet period of a week or so. So far as fall buying is concerned, it is early yet to look for inquiries under normal conditions, and buying is likely to be later than ever under the existing conditions. It is felt that the crops will be the big influence in the fall stove demand.

Pipe Fittings.—Prices on pipe fittings are reported as being very firm, and one house reports an advance of about five per cent.

Toronto

TORONTO, Ont., June 3.—The warmer weather prevailing during the last two or three days has had a beneficial effect on business and a distinct improvement is noticeable over the earlier part of the week. Weather conditions have been favorable to the crops and a more optimistic spirit prevails in business circles on this account. For the same reason the country trade is good, although the retail trade is still buying cautiously and keeping stocks of goods within reasonable limits. The city trade is showing some improvement, but is by no means brisk. The city architect's report for May shows a big decrease in building operations over the corresponding month of last year. This has naturally affected the demand for builders' hardware and supplies. The cool weather has affected seasonable lines, such as refrigerators, ice cream freezers, oil stoves, etc., but brisk business is anticipated as soon as the weather becomes warmer. There is a moderate demand for shelf goods, and garden tools are moving out fairly well.

Price Changes.

A number of price changes are to be noted this week, due in all cases to increased cost of raw materials. Galvanized sheets have again advanced, and this market is very unsettled because of the spelter situation. Galvanized ware and wash tubs have also advanced on account of the high prices of spelter, and for the same reason range boilers are higher. The spelter situation is acute, supplies are very scarce, and the market continues to advance. Under present conditions it is impossible to say with any degree of certainty what the limit will be in prices of galvanized products. Brass wire has advanced, and prices of galvanized wire have been withdrawn indefinitely. As predicted in these columns last week, prices of Italian and Russian rope have advanced, due to conditions in the hemp market on account of the war. Higher prices for Manila and sisal rope are anticipated, and may be announced any time.

Metals.—The spectacular rise of spelter is the chief item of interest in the metal markets this week. The situation is extraordinary and serious in its effect on certain industries. The copper market continues quiet and the situation unchanged. Tin is firmer, with a stronger undertone to the market. Lead has advanced, as was anticipated, but the antimony situation is unchanged. Aluminum quotations are higher and nominal.

Tin.—The tin market in London is weaker, but New York is firm, with a tendency to higher prices. There is a good general inquiry from consumers, but owing to the weakness in London, buyers and sellers are inclined to go slow. Local quotations are unchanged at 42c per pound.

Copper.—The New York market is quiet, but there is a decidedly firmer tone and good inquiry for export. The copper situation is a sound one, and with a revival of business prices would probably go higher. Production is on the increase, but there are no indications of any falling off in consumption, rather the reverse. Quotations are firm and unchanged at 21c per pound.

Spelter.—The market is in a worse condition even than last week, and the situation is very serious. Prices are higher and nominal for all positions, as there is no quantity of metal offered for sale for any delivery. The largest producers are reported as not wanting to sell much more than what they have already sold and indications point to still higher prices. Spelter has advanced 8c, and quotations are nominal at 30c per pound.

Lead.—The market is more active, and has advanced. There is a good demand at the higher prices, which appear to have stimulated buying. Lead has advanced ½c locally, and is firm at 6¼c per pound.

Antimony.—The situation is unchanged and the consumption is still heavy, with a scarcity of English brands. The market is not quite so active, and quotations are unchanged at 40c per pound.

Aluminum.—The demand for aluminum is good, and is having a tendency to force prices up. Quotations have advanced 1½c, and are nominal at 25c per pound.

Bar Iron and Steel.—The principal feature in the steel trade is the increased demand for steel bars and billets for lyddite and shrapnel shells respectively. The demand for other purposes is light. Bars are quoted at $2.05 base.

Galvanized Sheets.—In last week's issue of Hardware and Metal, the probability of higher prices for galvanized sheets was referred to. This advance is now in effect, and is due to the high cost of spelter. The trade is in a very unsettled condition, and considerable anxiety prevails on account of the difficulty that is being experienced in obtaining supplies of spelter. Unless the situation improves considerably, a further advance in sheets may have to be made. There are at present no indications of any relief in the situation. The price lists of sheets have been readjusted and the increase in prices is approximately as follows:—Queen's Head, 20c per cwt. advance; Fleur-de-lis, 10c per cwt.; and Apollo, 65c per cwt.

Rope.—As predicted in Hardware and Metal last week, there has been a sharp advance in the prices of Russian and Italian hemp rope. Supplies of raw material are difficult to obtain from both these countries, and the situation in this respect is serious. Higher prices are anticipated for Manila and sisal rope, as the American market is strong, and there is no improvement in the situation as regards raw materials. Trouble in Mexico continues, affecting sisal and high freight rates on Manila are increasing the cost of that product. The new prices are as follows:—Russian deep sea line, 28c; Russian tarred ratline, 24c; Russian tarred bolt rope, 20c; marline and houesline, 26c; and Italian rope, 28c per pound basis.

Galvanized Ware.—An advance of about 15 per cent. in galvanized ware is to be noted, due to the increasing cost of spelter. The new discounts are as follows:—English and Dufferin ware and wash tubs, 20 and 10 per cent.; other lines, 20 per cent.

Range Boilers.—Higher prices are announced, and are as follows:—30-gallon standard, welded, $5.50; standard riveted, $5.75, and extra heavy, $8.

Washtubs.—New prices on common galvanized washtubs are as follows: No. 0, $6.66; No. 1, $8.93; No. 2, $9.72; and No. 3, $11.09 per dozen.

Wire.—The new discounts on brass wire are 3 to 24 gauge 5 per cent., and 25 to 36 gauge, 10 per cent. The base price of smooth steel wire is unchanged at $2.30. Prices of galvanized wire have been withdrawn owing to conditions in the spelter market.

Wire Nails.—The situation is unchanged and quotations are firm at $2.35 base. Cut nails are quoted at $2.70 base.

Iron and Lead Pipe.—Business is quiet in sympathy with the building trade, but prices are very firm and an advance may be expected on galvanized pipe. Lead pipe has advanced 1c and is quoted at 9c and waste at 10c. Prices on iron pipe are given in the current market quotations.

London

LONDON, Ont., June 3.—The warmer weather of the past few days has had a good effect on business and there is a better demand for summer goods. Prospects for June business are very bright and no doubt much work, such as painting, repairing, etc., delayed last month on account of the unfavorable weather, will be undertaken during June. All lines of wire fencing have been advanced 10 cents per 100 pounds this week. Galvanized wares and sheets are expected to advance almost immediately. White lead is very firm and will probably advance within the next week.

Wire Fencing, Etc.

The following prices on wire fencing are now in effect:

	Per 100 lb.
Barb wire	$2.65
No. 9 Galvanized	2.40
No. 12 Galvanized	2.55
No. 13 Galvanized	2.65
No. 9 coil spring	2.45
No. 12 coil spring	2.65
No. 10 O and A wire	2.46
No. 11 O and A wire	2.52
No. 12 O and A wire	2.60

Garden Tools, Etc.—Sales of garden and lawn tools so far have been very satisfactory, and with warmer weather there should be a decidedly better demand in the near future. Harvest tools are quoted at 40-12½ per cent.; net prices on snaths are: No. 3, $7.25 doz.; No. 2, $7.70 doz.; No. 1, $8.40 doz.

Oil, Turpentine, Etc.—No change has taken place in turpentine or oil since last week. Turpentine is quoted as follows: Single barrels 68c per Imperial gallon; 2 to 4 barrel lots 67c per Imperial gallon; 5-gallon lots 75c per Imperial gallon.

Linseed oil is quoted as follows:

Raw Linseed —

1 to 2 barrels	82c per gal.
3 to 5 barrels	81c per gal.
6 to 9 barrels	79c per gal.

Boiled—

1 to 2 barrels	85c per gal.
3 to 5 barrels	84c per gal.
6 to 9 barrels	83c per gal.

Glass, Putty, Etc.—No change has taken place in quotations on glass or putty. Glass is quoted single diamond 20 per cent. discount; double diamond, 20 per cent.; cut lights, 20 per cent. Net prices are as follows:

	Single Dia.	Dble. Dia.
Up to 25	$5.20	$ 6.88
26 to 40	5.60	8.00

White Lead to Advance. — Although white lead prices remain unchanged it is altogether probable that an advance will take place by next week. Pure white lead in oil is quoted at $9.10 per 100 pounds in ton lots and $9.40 per 100 pounds in less than ton lots.

Winnipeg

WINNIPEG, June 2.—Again a better tone to the market is noted. From the hardware houses it is reported that retailers are buying in better quantities than for some little time. One of the lines which is moving most rapidly is fencing, both barbed wire and woven. While there is little profit for either wholesale or retailer in this line, it is yet very satisfactory to note the big demand, as this indicates clearly farmers have been getting more land under cultivation, and that conditions are so satisfactory that they are taking immediate steps to fence this in properly.

Prospects Bright.

General conditions are satisfactory. From Manitoba comes word that rain would be appreciated, and would do a great deal of good. There is no sign yet, however, that rain must come within a day or two if the crop is to be saved. Prospects indeed seem very bright.

During the week have come a number of changes in price, perhaps the most important being galvanized iron and galvanized ware. It seems quite evident, however, that a further rise in linseed oil is to be expected within the next month. All things taken together, there seems reason to believe that predictions of $1.10 oil within the next few weeks are quite likely of fulfilment.

Small Flax Acreage.

Already something has been said about the inability to sell oil cake requiring the manufacturers to make their profit from the oil alone. On the head of this there now seems an absolute certainty that flax seed will be high this fall. Not 30 per cent. of the acreage given over to flax last year is seeded with this crop in 1915. The natural result, therefore, will be not only higher prices, but difficulty in getting seed. This difficulty is likely to be more acute by reason of the fact that present stocks are very low. Crushers here indicate that they have only enough on hand to last a month and a half.

It is true that flax has dropped slightly in price in the last few days. This, however, seems to be due to market manipulation. As a matter of actual fact, it is said to be practically impossible to buy at the low figures quoted.

The consumers of oil in large quantities, who have the ability to store this without risking any loss, would seem to be well advised to cover their requirements without delay.

Black steel sheets, which have been on a rather uneven basis for the last two or three weeks, are now steady at the following quotations:

10 and 12-gauge	.....	$3.15
14 and 16	„	3.10
17 to 24	„	3.35
26	„	3.45
28	„	3.60

The high cost of spelter is entirely responsible for the last rise in galvanized iron, which has been put into effect this week. Spelter, which has formerly sold in New York at about 4.05c, is now being quoted at 21c. This is due, of course, to difficulty in getting stocks, resulting from European supply being interfered with, and from a great deal of manipulation on the American market. The high prices have made advances in galvanized iron absolutely necessary. These new prices are:

	Apollo and Fleur de Lis.	Queen's Head.
10¾ oz. or 28 Eng.	$5.75	$6.00
28 Am. or 26 Eng.	5.50	5.75
26 Am. or 26 special	5.25	5.50
24 Am. and Eng.	4.85	5.10
22 Am. and Eng.	4.85	5.10
18 & 20 Am. & Eng.	4.75	4.95
16 Am. and Eng.	4.60	4.80

Galvanized Ware Up.

Galvanized ware during the week has risen 10 per cent., due, of course, to the same causes as are sending up galvanized iron. Present discounts are:

Heavy pails, 10 per cent. off list.
Light pails, 17½ per cent. off list.
Heavy tubs, 17½ per cent. off list.

Putty Higher.

The high price of oil and of whiting has necessitated an advance in putty. This is now quoted as follows:

100-lb. drums, $3.25.
25-lb. irons, per cwt., $3.50.
1½-lb. tins, 7c.

Red lead, too, has advanced sharply, being now quoted at 12½c per lb. It is only a few weeks ago that the quotation was 7½c. From this it jumped to 9c, and now to the higher figures quoted above.

Orders for paints are reported as satisfactory. These are all of a sorting nature, and are individually a little smaller than in past years. The volume of business, however, is gratifying.

For stoves there seems to be a small demand at the present time. Until July comes it seems heavy business is out of the question. In furnaces, however, things are brisker at present. Little or no building is being done in the cities, but a good deal is going on in the small towns and in the farming communities, and for these buildings a considerable number of furnaces are being sold.

An excellent display of varnishes arranged by Harry J. Hanwell for The Marks, Clavet, Dobie Co., Ltd., Port Arthur, Ont. The base and background is finished in dead white. The banner of the Rice Leaders of the World is supported by the two pillars six feet high. They and the background being entwined by artificial grapes. Panels of varnished and stained woods have been used with good effect and created considerable interest among those who viewed the display. Two large Canadian ensigns on the side wall, were neatly draped around a proclamation to the public to spend their money in Canada by buying home products. In a letter to Hardware and Metal Mr. Hanwell states that the firm received a very large number of enquiries as a result of the display. Window trimmers can secure many ideas from the above illustration.

Boosting Paint Sales in June

More Money in Canada's Savings Banks Now Than at Any Time in the History of the Country—Weather Affected May Paint Sales — Prospects for June —Making Use of Manufacturers' Helps.

By E. A. THOMPSON.

THE month of May is usually a splendid month for selling ready mixed paints and varnishes — in fact it is one of the best months of the year. During May, 1915, the month just closed, a great many retail hardwaremen sold considerably more paint than they did in the corresponding period of last year. There is, however, one feature of the paint trade last month which should not be overlooked. During May we had a good many protracted spells of cool and wet weather—weather that does not help the sale of paints.

One merchant who sells an exceptionally large amount of paint each year, stated to the writer a few days ago that he felt sure a great many people who had intended doing some painting in May, had postponed the work owing to unseasonable weather.

This particular merchant is going to push the sale of paint during June, on a bigger scale than he has in past years. He feels that a great many people have put off their spring painting and it is not yet too late to sell them. He is also boosting paint this year to try and offset the losses he has sustained in the builders' department, owing to the dropping-off in the building trades.

In all probability a great many merchants are of the same opinion as the merchant referred to, and feel that although May was a good month, there is still a great deal of spring painting to be done.

Every merchant realizes that when war conditions are considered, business in Canada is very good indeed—much better than was expected a few months ago. There will probably be a steady improvement from now, but no merchant should rest on his oars and wait for the return of better times. This is a time for work. It is the duty of every retailer in Canada to push the sale of goods as he never has in the past—and thus keep our industries running and workmen employed. The savings in Canadian banks to-day are the greatest in the history of Canada. People have money, and it is largely up to retailers to get the money circulating.

Every retailer should do his bit—and more. He should solicit the assistance of the manufacturer and make use of all the selling helps available.

Did you ever stop to consider the valuable assistance you can obtain from the manufacturer in pushing the sale of paints? No doubt some merchants have never given much thought to the subject. On the other hand there are merchants who take advantage of every opportunity offered by the manufacturer. Every large paint manufacturer employs a staff of men who are willing to give their valuable experience and time in endeavoring to assist the dealer in making a success of his paint department. These men have had many years' experience along this line and can give the dealer valuable assistance if he is open to receive

it. A request from a dealer is always given prompt attention. But these men do not confine their efforts to the dealer alone. They are willing to impart valuable and interesting information regarding paints to the individual if the retailer will only send in the names of prospects. Many of the large paint firms supply blank forms for the use of the dealer. These forms if used properly will prove to be excellent business bringers for you can rest assured that, if you will fill in the forms with the names of prospective paint purchasers, the advertising department of the manufacturer will follow-up the prospects in a systematic manner with suggestions as to how people can do the work in which they are interested. Another fact often overlooked by dealers is that the manufacturer is willing to supply electrotypes and advertising suggestions for newspaper work. These ads. have been gotten up by men who have made a close study of the work. Many dealers state that the reason they do not advertise is because they are unable or do not have the time to prepare ads. For these merchants the advertising department of the manufacturer will prove very beneficial.

Care should also be taken to make good use of all color cards, sample boards, slats, etc., supplied by the manufacturer. These business bringers are made up at great expense and if properly used will bring good returns. If used improperly or carelessly they are a total loss and fail entirely to serve the purpose for which they were intended, and at the same time incur a needless waste of excellent advertising material.

Let us all get busy and put our shoulder to the wheel, doing all we can to keep business as nearly normal as possible and more especially to push the sale of paints and varnishes during the month of June.

PRACTICAL COURSE FOR SHEET METAL WORKERS.

(Continued from page 42.)

radius, describe an arc E i, Fig. 5. Then with E as centre and P K in Fig. 3 as radius, form another arc to intersect arc E i. Then draw a line from 1 to E i and from there to E, which will give the desired angle to form one-half of one side. Then draw the various lines the desired height, K A Ai and B and Bi, and so on, which will give the one-half pattern, the outer dotted lines are for the seams. And, if this fitting is required to be made from small pieces, a quarter pattern will be sufficient, except that material must be allowed extra for seams at J 1, Fig. 5 turnings the pattern over to form the left or right halves.

HARDWARE MEN SELL SPORTING GOODS.

(Continued from page 32.)

The goods are attractively displayed, while the ball team playing in the field adds a realistic touch that would be bound to attract considerable attention.

Accompanying this article there are also, three reproductions of advertisements by hardware firms featuring sporting goods.

The advertisement of Brace, McKay & Co., Ltd., Summerside, P. E. I., in addition to featuring bicycles and bicycle sundries, fishing tackle, etc., has considerable space devoted to baseball supplies. The ad. makes an appeal to the Red Sox, Pioneers, Independents, and other clubs.

WHERE HALF HOLIDAY IS OBSERVED.

In next week's issue of Hardware and Metal there will appear a list of Ontario towns and cities in which a summer half holiday is observed. This is a feature that this paper runs every year in June for the benefit of the wholesale houses and their travelling salesmen. Already a lengthy list of towns and cities has been received, which shows that the half holiday has gained great headway in the last few years. If any of the wholesalers or manufacturers would like any reprints of this article, we would urge that they write us at once, stating the number they will require.

MacNab Bros., hardware merchants, Orillia, Ont., have used newspaper space three cols. wide and six inches deep, to announce that they sell golf, lawn tennis, and baseball goods. The illustrations used are very timely and help to make an attractive display advertisement that will at least attract the eye.

Ingram & Davey, Ltd., St. Thomas, in their advertisement, 2 cols. wide by 6 inches deep, announce that, "There will be Big Doings in Baseball, Tennis, Golf, Football and Lawn Bowling this year," and that the Ingram & Davey store is prepared to cater to the needs of the sportsmen.

The three advertisements shown are typical of dozens of hardware firms advertisements featuring sporting goods, and which are appearing in newspapers in all parts of Canada.

Weekly Paint Markets

Montreal

MONTREAL, June 3.—While there was some slight cessation in buying interest noted in the paint trade in May, the month was generally considered as being an improvement on the same period a year ago, so far as the general country and city store trade was concerned. The April buying to take advantage of low prices prevailing in the face of determined advances caused heavy buying during that month and the May business suffered somewhat in volume on that account, although orders in number made brisk activity. With warmer weather and a good consuming demand for the month past, it is expected that there will be an increase in the demand during June. A feature of the trade has been the spring demand in the city store trade. This appears to indicate that many householders with time on their hands and an inclination to share expenses have been doing their own work rather than employ painters.

A feature of the week has been a readjustment of the quotations in the linseed oil trade which to a large extent overcomes the wide spread which has prevailed for some weeks. This was brought about by a slump in the prices of flax, which put the crushers on a more even level and brought the cost of production much closer to the value of the oil stocks certain crushers and dealers had on hand. White lead is very firm on advances of about $14 a ton for lead in the United States and prices for zinc in oil are purely nominal in view of the unparalleled market for spelter.

Linseed Oil.—A marked decrease in the value of flax has had the effect of smoothing out many of the irregularities which have prevailed in the linseed oil market for some weeks. As has been pointed out in these columns, the rising values of flax and falling consumption of oil created unparalleled conditions, and the different producers and dealers naturally did not fare the same in regard to costs and volume of supplies on hand. The result was that while some firms were quoting on a basis fixed by cost of production of stocks on hand, others were quoting on the basis of spot flax. The difference in prices to the trade was as much as 9c and 10c a gallon and there was naturally general dissatisfaction. As yet the spread in prices has not altogether disappeared, but the top figure has fallen materially and firms which a week ago quoted 88c and 90½c now offer 82c and 84½c. The general range in prices is 80c and 83c for raw and boiled, respectively, to 82c and 85c, although there are quotations both slightly under and slightly above to be heard.

	Raw.	Boiled.
1 to 2 barrels	80-82	83-85
3 to 5 barrels	79-81	82-84
6 to 9 barrels	78-80	81-83

Gasoline and Oils.—Demand for gasoline continues fairly satisfactory, with some improvement in the volume moving. Prices are on a flat basis of 14½c for both drums and tank wagon. There is a good demand reported for lubricating oils and greases which always move well after the opening of navigation.

Turpentine.—The trend of turpentine prices continues downward, the reduction of refiners of 2c last week having more influence with the quotations of the dealers to the trade; in fact figures as low as 64c are given, although 70c is heard as a top price.

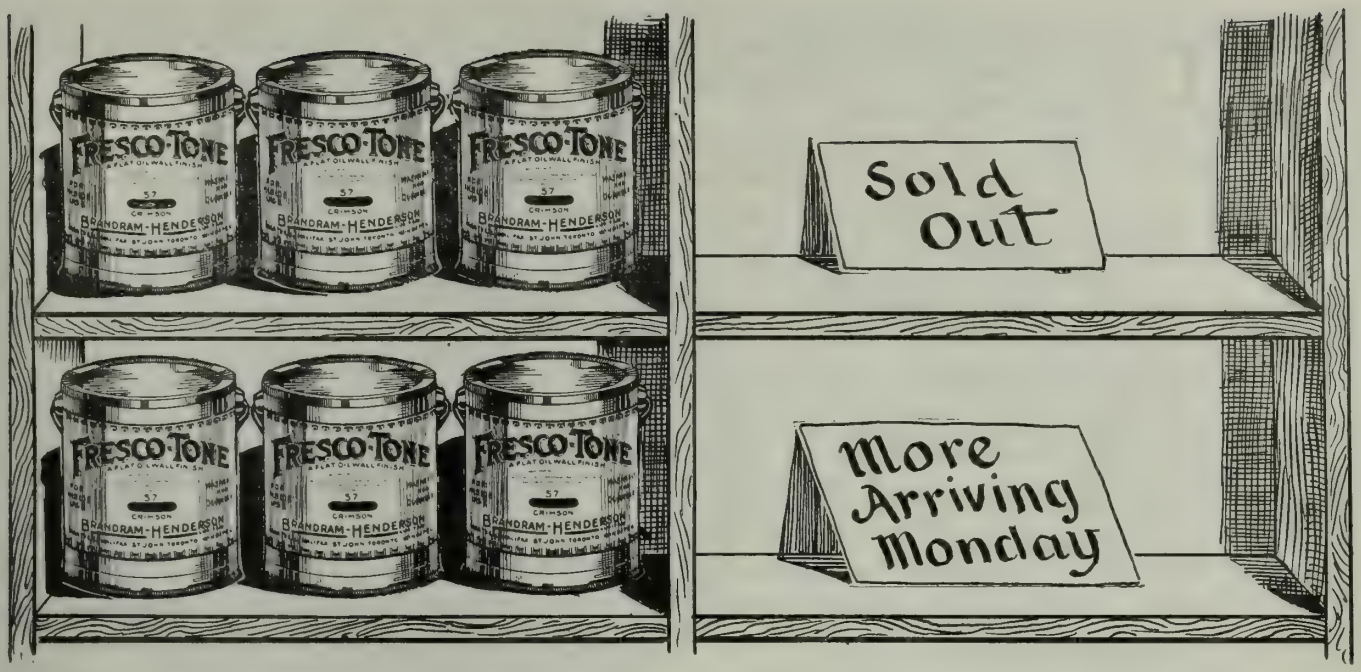
	Per gal.
½ bbl. lots	68-72
1 bbl lots	65-69
2 to 4 bbl lots	64-68
5 to 10 bbl lots	63-67

White Lead.—The strength in the white lead market reported last week is further emphasized by remarkable advances in the prices of American lead, the prices having gone up $14.00 the ton on the recent movement. Under the circumstances the present quotation of $8.95, with 30c above for less than ton lots, can hardly last for any considerable period, particularly as there appears to be reason to believe that lead, which has been comparatively quiet since the war outbreak, may now follow in the course of spelter.

Zinc.—With the spelter market practically beyond control, the price of zinc in oil is purely nominal, and dealers do not care to make quotations. A price of 15c in 25-lb. irons is heard, but against this a cost of 17c to 18c for dry zinc on the present market is recorded and prices therefore range considerably higher.

Toronto

TORONTO, Ont., June 3.—The volume of business seems to have fallen off somewhat during the latter part of May. The retailers have good stocks on hand for the season and the comparative cool weather has had a tendency to make trade less active. Considering the situation generally, however, there is little cause for complaint as far as the country trade is concerned, although there is room for improvement in city business. There are few changes of importance to note this week, but all quotations are very firm and for some lines nominal. The white lead market is very strong and an advance in price is anticipated in the near future. Putty is firm at the higher prices announced last week. The glass situation is unchanged and prices are very firm. Oil and turpentine are both firm and prices unchanged. Collections are not showing much improvement.



Linseed Oil.—The range in prices is the same as last week and the market is steady. Flax seed is a little weaker in Winnipeg, but oil is firm and unchanged. The following prices are being quoted in Toronto:

	Raw.	Boiled.
Single barrels	82	85
3 to 5 barrels	81	84
6 to 9 barrels	80	83

Turpentine.—The market in the South has made a good recovery after a weak spell and is now strong. Production is stated to be from 25 to 30 per cent. below last year, which is tending to strengthen the market. Local quotations on turpentine are unchanged, but firm. The following prices are being quoted in Toronto: Single barrels, 68c; 2-4 barrels, 67c; and 5-gallon lots, 75c per Imperial gallon.

White Lead to Advance.

Dry white lead has advanced in price following the advance in pig lead. An advance in the price of lead in oil may be expected almost immediately.

Fill Your Shelves With FRESCO-TONE

They will soon be emptied.

The Flat Finish vogue finds its fulfilment in

"FRESCO-TONE"

The soft, velvety finish, thoroughly sanitary and easily washed.

We predict for you a large sale of

"FRESCO-TONE"

this season. We have added five new colors to keep up with the increasing demand.

Fashion has set her seal of approval on Flat Finishes, and many of the old-fashioned color washes on walls, etc., have been replaced by the new washable Flat Oil Wall Finish,

"FRESCO-TONE"

Try an assortment, including our five new colors, to start the season with.

Our advertising display matter, show cards, window cards, etc., are very original and trade compelling—send to-day for particulars.

MANUFACTURERS OF "RED DEVIL" TOOLS AND HARDWARE SPECIALTIES

Handle your Oils and Gasoline with the Wayne Pump

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

FAIR PROFITS INSURED

To Every Bissell Dealer

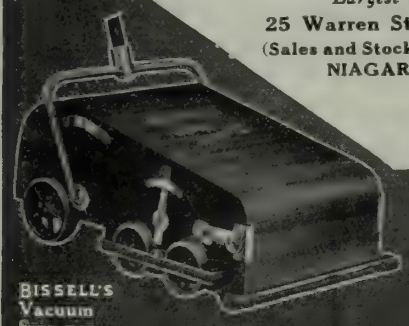
Our established policy of *rigid maintenance* of the *advertised price* of *Bissell's Cyco Ball-Bearing Carpet Sweeper* and *Bissell's Vacuum Sweeper and Cleaner* insures a reasonable profit to every merchant who handles the Bissell line.

While dealers selling other lines are involved in a price-slashing war which jeopardizes legitimate profits, Bissell dealers remain strictly neutral, selling, at the established price, the *standard Bissell cleaning devices* for which there is always a steady, unfailing demand.

For *salability* is another advantage secured to you through the prestige of the name Bissell's. Neither Bissell's Carpet Sweepers, nor Bissell's Vacuum Sweeper and Cleaner ever need a dollar's reduction to whet public interest.

In the mind of the American woman who is your customer for a carpet sweeper or vacuum machine, *"Bissell's"* stands for the utmost that can be developed in the field of modern cleaning devices. It has embodied *progress* and *reliability* for nearly 40 years.

With the addition of the *Bissell's Vacuum Sweeper* and *Bissell's Cleaner* to the big Bissell family, you can meet the requirements of every customer.



"Put your sweeping reliance in a Bissell Appliance" is the new Bissell slogan. Change this to "selling reliance" and it becomes timely advice to every dealer in the country.

RAMSAY'S PAINT

THE COMPLETE LINE
"Made in Canada"

Under the trade-mark of this house—which has been established since 1842, is manufactured everything for the use of the painter or the man who does his own painting.
Ramsay's Ready-Mixed Paints are Dominion-standard—they cover the most area—give unusually long wear—and make a friend of every user you sell them to.
Write us for prices on your requirements.
"The Right Paint to Paint Right."

EXTRA HEAVY BRASS GLOBE, ANGLE AND CHECK VALVES

These valves are very carefully designed, and no effort has been spared to make them representative valves of their class.

They are well proportioned, handsomely finished, and not only present a fine appearance, but have all the best and most approved features of construction necessary to meet the requirements of up-to-date practice.

Catalogue mailed FREE.

JENKINS BROS., LIMITED

103 St. Remi St. **Montreal**

MAKE MONEY FROM GOOD PUMPS—PROFIT

Unless a metal pump is made just right it will leak at joints or valves.

"Aremacdee" pumps do not give dealers who sell them trouble and loss from defective service in "Aremacdee" pumps sold customers.

Pumps for every use—hand or motor—force or lift — every type a dealer can sell.

All in the big catalogue. Ask for it—for dealer prices—for dealer terms.

The
R. McDougall Co., Limited
GALT, CANADA

Our Tiger (50 cent line) Brooms

are superfine carpet BROOMS on **polished** handles. Offer them to your customers and secure business that stays. Splendid value in 35c, 40c, 50c, 60c lines. Try a sample shipment and be satisfied.

We make **Factory Brooms.**

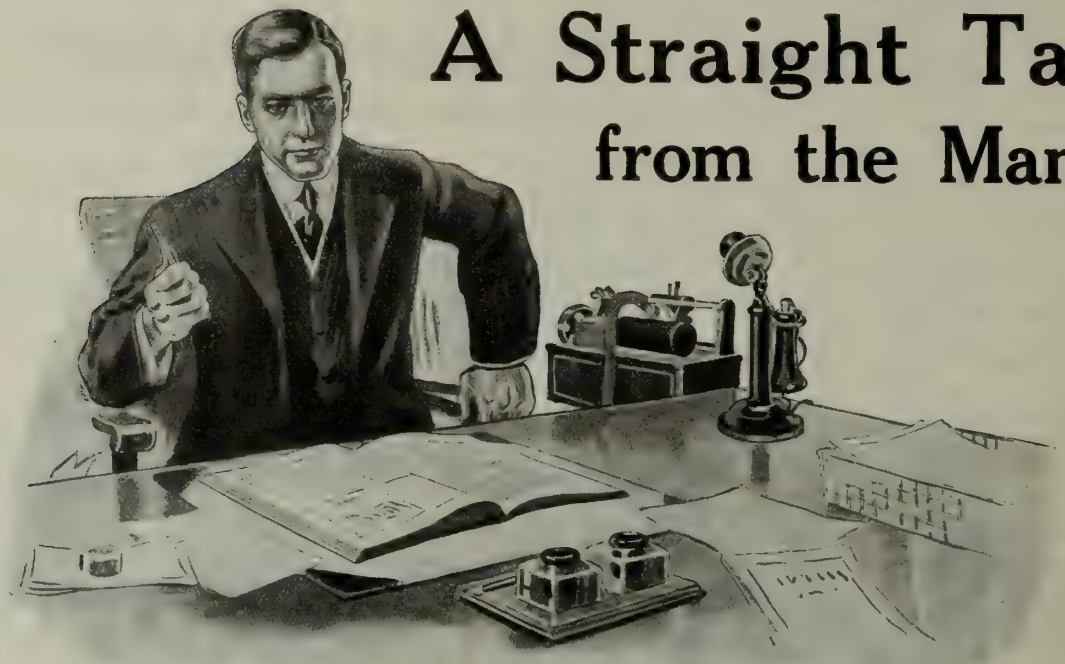
Royal Canadian, $38 per doz.; Eze, $42 per doz.; Bicycle, $48 per doz.; Ajax, $8 each.

"Elevating The Commonplace"



The popular conception of Wholesale Hardware Merchandising is that goods are bought from the Manufacturers long in advance of an actual demand, then they are carried in stock until ordered by the Retail Merchant, and that he in his turn disposes of them to the Consumer.

This, we say, is the popular conception of a Wholesale Hardware Business; just a spoke in the wheel of distribution, a necessary evil, perhaps.

In many cases this might be right, but it is not applicable to "The Big Winnipeg House." We have taken the Commonplace and coupled it to an Ideal. Daily we are weaving Romance into the Hardware Business and seeking to raise it to a higher plane by strict adherence to our policy of selling only Merchandise—plus —Service.

This is our Ideal, and our aim is to foster and develop it.

MILLER-MORSE HARDWARE CO. LIMITED
"THE BIG WINNIPEG HOUSE"

A Straight Talk from the Manager

When Answering Ads

AT the regular subscription price, each copy of Hardware and Metal costs only $3\frac{11}{13}$ cents—less than you would pay for an ordinary blank scribbling book. The revenue from this source alone, would not be sufficient to maintain the invaluable Dominion-wide service given its readers by Hardware and Metal.

Without its advertising revenue, any trade paper would have to charge an exceedingly high price in order to give a service worth while. This would naturally curtail its usefulness by cutting down the number of its subscribers.

Advertisers use space in trade papers to help them interest retailers in selling more of their goods—to their mutual profit. It is, at times, difficult for them to judge whether their advertising is accomplishing the desired result. But it would not be difficult if subscribers made it a point when writing advertisers to mention the paper in which they noticed the advertisement.

Now consider this: The value of Hardware and Metal to you depends upon the quality of service given; the service given depends largely upon the advertising revenue; the advertising revenue depends upon the interest which you, as a retail hardware merchant, show in the advertisements. For the advertising revenue is easily maintained, when advertisers realize, beyond a doubt, that their investment is earning dividends.

And so you can see where it is going to pay YOU to mention Hardware and Metal when writing our advertisers.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED TO HEAR FROM OWNER OF good hardware store for sale. Send price and description. D. F. Bush, Minneapolis, Minn. (23)

MANUFACTURERS' AGENT IN VANcouver seeks correspondence with manufacturers who desire to do business in British Columbia. Commission basis on approved orders. Been covering territory for three years, and have wide connection with best buyers. Highest possible reference as to salesmanship and reliability. HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

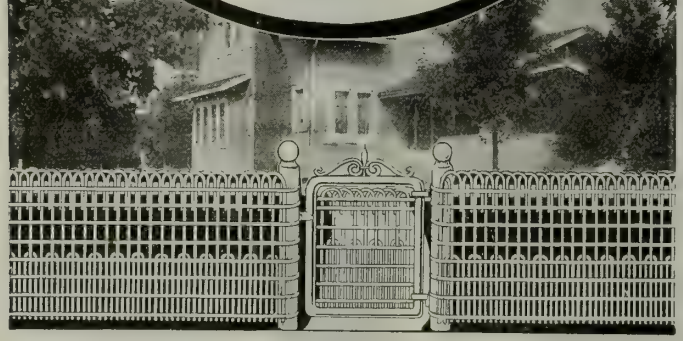
Dealers—Handle this Fence

YOUR success in the sale of fencing does not depend so much on your sales ability as on the fencing you sell. It's fence service—not price—that brings you customers. Ours is a fence of service—a fence of repeat orders. We have letters from dealers all over the Dominion substantiating these statements.



Peerless Ornamental Fencing

not only protects, but beautifies property as well. Every stay is made of strong, stiff wire that will not sag. Our fencing is made from galvanized wire and in addition, is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless fence is easy to erect and will hold its shape for years to come. We also build a full line of ornamental gates.

Send for Dealers' Proposition

Get our literature showing many beautiful designs for lawns, parks, cemeteries, etc. Also ask about our farm fencing and gates.

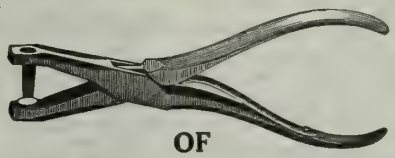
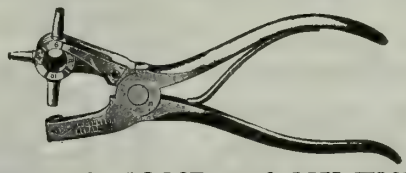
BUFFALO



Ideal Threshers' Oil



is the most satisfactory oil obtainable for use on bearings of ALL kinds of farm machinery.
Is a straight mineral oil, dark red in color, heavy, but not too heavy to occasion loss of power, or to prevent free flowing.
Is not affected by moisture, or climatic changes, and age will not impair its unequalled lubricating properties.
Is possessed of a very low, cold test, so that it does its work in the cool of the morning equally as well as in the heat of the day.
You will make no mistake in recommending your customers to use Buffalo Ideal Threshers' Oil.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling

"AYLMER" Force Pumps
They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

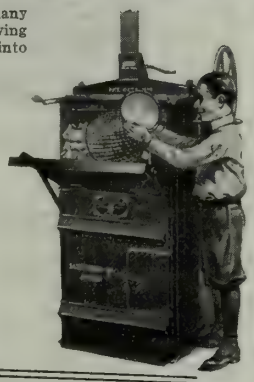
THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

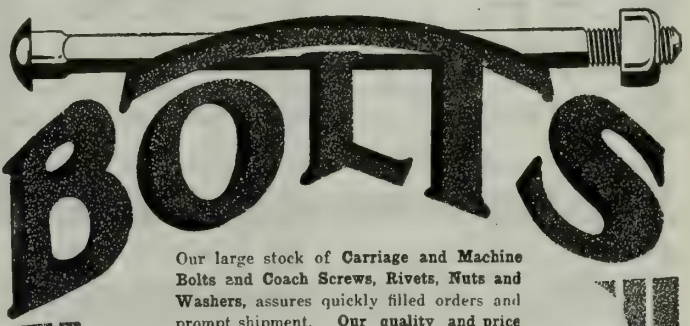
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.



Cash For Waste Paper

You, like thousands of others, are wasting many dollars—perhaps hundreds—every year, by throwing away waste paper. Stop this waste—turn it into profit by using the

ALL STEEL **Schick** FIREPROOF



Paper Baler

All steel—absolutely fireproof—strongest—simplest—easiest to operate. Will last a lifetime, yet pays for itself first year. Write to-day for low prices and free trial offer.

DAVENPORT MFG. CO.
Dept. "H.M." Davenport, Iowa

BOLTS

Our large stock of **Carriage and Machine Bolts and Coach Screws, Rivets, Nuts and Washers,** assures quickly filled orders and prompt shipment. **Our quality and price please everybody.**

LONDON BOLT & HINGE WORKS
LONDON, CANADA

Atlas
10 Cent Fly Swatter

This swatter has an extra long handle—10 inches. It is very neatly and securely bound with soft green felt—cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible—will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.
New Haven, Conn.

A Gallon of Ice Cream in Three Minutes

is one of the strong selling points of the

DANA PEERLESS FREEZER

as it is the quickest time of any freezer made, and its ease of operation and economy in ice are other good ones.

Not an experiment. Manufactured and sold for over 40 years in U.S.A., and for two years in Canada without a complaint from anybody.

The "Dana" is sure to make the most of your freezer business.

Order now. We ship quickly.

TRADE MARK KEYSTONE BRAND REGISTERED

A Light Broom A Good Broom

There is only one broom on the market that is both those things, for it has been the policy of manufacturers to make light brooms only in the cheaper grades until we brought out the

"NUGGET" BROOM

The "Nugget" is made of the best corn money can buy, and will not turn over at the tip or fall out with use. Its handle is golden yellow, handsomely finished throughout and stitched with four rows of yellow twine. Each broom bears the "Nugget" trade-mark and comes in an individual wrapper.

Every housewife will appreciate the **"good, light** broom."

For prices, etc., write.

Stevens - Hepner Company Limited

PORT ELGIN, ONTARIO

The "Nugget" broom is only one of the famous Keystone Brand Brooms and Brushes.

Did You Ever Buy Fireplace Goods From US?

This is not merely a side-issue with us

It is our Business and we are Specialists therein. We give you the best there is in Service and Our Motto is "QUALITY."

Stanley Tools

№ 386

STANLEY JOINTER GAUGE FOR IRON PLANES

A tool that will enable the workman to plane bevels of any angle between 30 and 90 degrees, or to square up the edges of boards with extreme accuracy.

The method of attaching same to a Plane is such as to insure its being absolutely rigid when in use.

All parts except the knob are of metal and the joints and bearing surfaces are machined.

Show this new Gauge to your wood-working customers. You will find them to be greatly interested. Special circular containing complete description upon request.

Manufactured by

TINKER TOM'S TALKS.

Talk Number Three

"Honor" you say—"What's that got to do with Galvanized Sheets?" Why, bless you, it's the whole thing. There's so many ways of "skinning the cost"—low Spelter—thin coating—poor Black Sheets—bum inspection—that the average buyer don't know how to get protection, and especially during these times. Better play safe by using "PREMIER" Galvanized Steel Sheets—Made on Honor—by experts—in Canada.

Fairbanks Household Scales

10 lbs. Capacity with no loose weights.

A single sliding poise will handle all weights up to the full capacity of the scale. The beam is graduated to ounces.

The beam and poise are nickel plated, the scoop is tin, and the standard painted black.

Fairbanks Household Scales were designed to take the place of the old Spring Balances which have been condemned by the Government.

We have issued an attractive circular illustrating this scale and will be glad to supply it free of charge to dealers stocking these scales.

BUILT WITH THE USUAL FAIRBANKS ACCURACY.

BIG Ben is the biggest thing to-day in the American alarm clock industry. He has everything in his favor—quality, looks, and style. He runs on time, he rings on time, he stays on time.

Slender, massive, richly plated, he stands seven inches tall, with well-shaped distinct hands and a big broad dial easily visible in the dim morning light.

He rings just when you want and either way you want—*five straight minutes* or every other half minute *during ten minutes* unless you shut him off.

His keys are large, strong, easy to wind; his voice deep, jolly, pleasing to hear. The movement plates are bridged like on a Waltham watch— you can change both mainsprings *without taking the movement apart.* The pivots are of hard steel piano wire $\frac{22}{1000}$ of an inch thin. The escapement is a hardened steel pallet escapement—not a pin escapement like that of other alarm clocks.

We are carrying on hand a stock of Big Ben specially put up for *Canadian* trade, 6 in a carton together with a full set of Store Selling Helps, (posters and show cards.) On an order for 12 we give a solid mahogany display stand. On an order for 24 we print your name free on dials and with an order for 48 we send a striking, electric flashing sign, just the thing for your window or counter.

The minimum retail Canadian price is $3.00, and there's a $3.00 resale tag on everyone you buy.

Show the goods that make summer housework easier and you'll make every woman in your vicinity a customer.

During the summer months there is an ever-increasing demand among housekeepers for those appliances which lessen and lighten housework, and the dealer who shows a well-known line of these goods has the advantage over competitors who carry unknown, untried brands.

UNIVERSAL Home Needs

are known everywhere—known for their superior construction, their practicability and their many exclusive, patented features which make for the highest efficiency in operation. These features are strong selling points which seldom fail to complete the sale.

Prepare for this summer demand by making your stock of UNIVERSAL Home Needs complete. Feature the various appliances in your windows, on your counters and in your local advertising. In this way you'll gain the trade of the housekeeper to her advantage as well as your own.

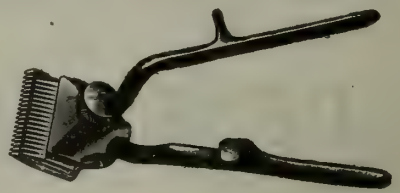
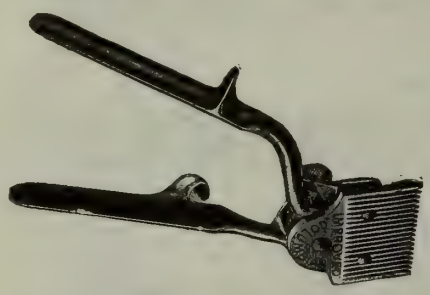
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.



present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1, and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

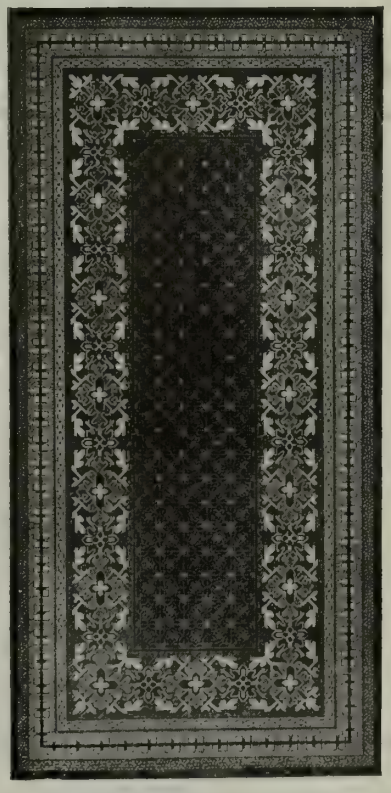
CONGOLEUM RUGS

In Handsomely Colored Designs.



THESE RUGS ARE JUST WHAT ARE NEEDED

THEY'RE so clean and nice looking and the designs are in such good taste.

They can be left outdoors on the verandah all summer. They can be washed with the hose —because they are waterproof, and they will not fade or get weather-stained.

SPECIAL FEATURES

Congoleum Rugs are entirely a new product; they lie flat and firm without nailing and never curl or "kick-up" at the edges. They are sanitary and washable because they are waterproof. They are very serviceable and the **extensive and attractive advertising campaign conducted by the makers means a big demand.**

GLOBE

(Made in Canada)

Bumper crops should make this year the *best ever* in Mower Files. And the fact that we supply 90% of Canada's file requirements gives you an idea of what you can expect with the "Famous Five."

Behind them are 50 years' experience—5 great plants —a 60,000,000 yearly output —and a record of 90% of the country's file-trade. No wonder the "Famous Five" *win and hold* trade wherever they go into service.

PORT HOPE ONTARIO

DON'T CARRY A LARGE STOCK

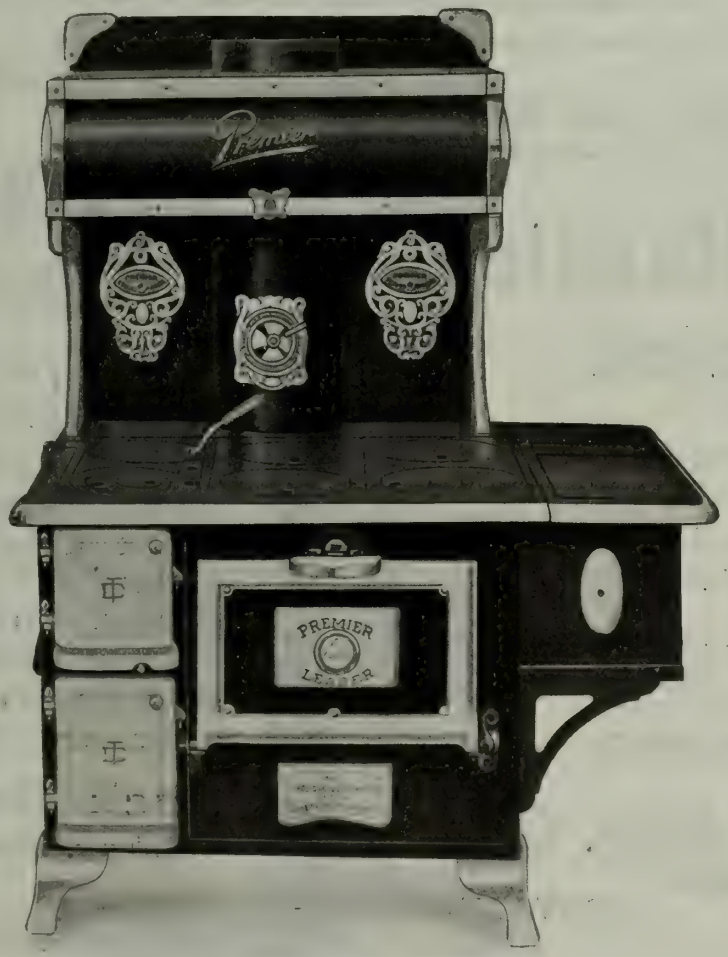
of chain-blocks, as of course you will be obliged to do if you deal in foreign-made blocks.

Be a Morris Dealer and carry just one or two of each size. Our stock of chain-blocks is the biggest in Canada, and every order is shipped the same day we receive instructions.

Some dealers make no attempt to handle chain-blocks, thinking a big stock necessary, and not wishing to be responsible for foreign-made articles.

Morris Chain-Blocks are built and stocked in Toronto and completely satisfy both objections. You should look into this useful addition to your lines. Your customers will make it worth while.

THE HERBERT MORRIS CRANE & HOIST COMPANY, Limited,



EMPRESS WORKS, PETER STREET, TORONTO.

DAVIDSON'S
PREMIER LEADER
STEEL RANGE

A High-Grade Steel Range at a Popular Price.

The Range that meets the demand for a high-grade guaranteed article at a popular price. Just as fully guaranteed as to its baking and economical operating qualities as our famous higher-priced ranges. The body is made of heavy polished steel, well protected by asbestos, and is hand riveted.

The firebox is absolutely correct in its proportions. The linings are heavy and duplex grates are also made heavy to ensure greater durability.

The oven is made of heavy steel, strongly braced to prevent warping.

The top is made in sections. All covers and centres are strongly ribbed.

Back smoke flue is made of cast iron, which does away with the rusting-out trouble common to steel flues.

Nickelled trimmings are neat and easy to clean. Set on the blued steel makes this a very attractive range.

PREMIER LEADER

With reservoir and high closet (roll door). For coal only, but by reversing duplex grates will give a fine wood fire box. Made in two sizes. Persian closets supplied if desired.

No.	Size of Oven.	Pot Holes.	Weight crated (Square)	Weight crated Reservoir
8-18	18x18x12	6-8"	285 lbs.	310 lbs.
9-18	18x18x12	6-9"	285 lbs.	310 lbs.

The King's Plate

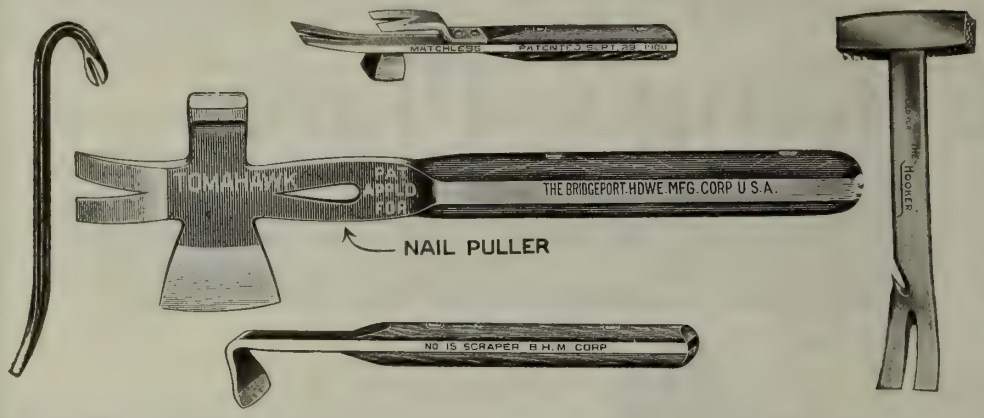
Made in Canada

TO many dealers The King's Plate comes as a revelation. It was not realized that Canada was producing plated ware not only mechanically perfect, but more than satisfying from an artistic point of view. The King's Plate enables dealers to offer plated ware of all-round excellence at a moderate price.

Prominent among The King's Plate designs that have aroused the enthusiasm of dealers and their customers, are:

The King George
(As Illustrated)

Niagara



Leonora

All plated on an 18% nickel base, and extra plated on parts where wear is greatest.

Absolute guarantee to strip to a Government test, up to the standard.

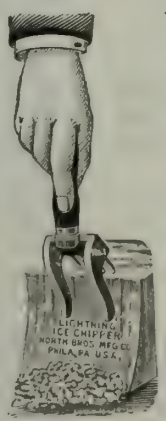
Time to Order



FREEZERS

Whether you stock the **LIGHTNING, GEM** or **BLIZZARD**, you get a Freezer that has made good for more than a quarter of a century—one that has won its way into the hearts of the housekeepers by service that satisfies—backed by quality that creates confidence in both merchant and manufacturer—one that's well advertised and in demand—one that brings trade and helps you keep it.

The **BLIZZARD**, being a low-priced Freezer, makes a good running mate with either the **GEM** or **LIGHTNING**. Now is the time to place your order. Shipment can be made any time you specify.

BE SURE to INCLUDE the LIGHTNING ICE CHIPPER No. 1. You can sell one with every Freezer. It chips a block of ice into small uniform pieces in a jiffy, just right to pack closely around the can and shorten the time of freezing. So much easier to make Ice Cream. They help the sale of Freezers.

Your Jobber will Supply You.

Stanley Wrot Steel Foot Bolts

In 3, 6 and 10 inch sizes

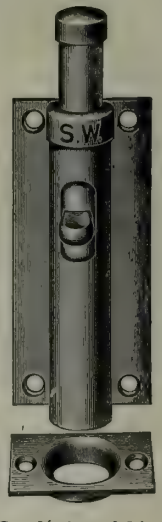
A Foot Bolt is No Better than Its Spring.

Cut ¼ size of 10-in.

STANLEY Wrot Steel Foot Bolts are strongly built, handsomely finished and are as strong sellers as they are strong in service. They exemplify "Stanley Quality" throughout.

One indication of quality in these bolts is the Stanley Sherardized Spring. This process affords as good a protection against rust as it is possible to obtain, and guarantees long life to the bolt. The springs are made of the best grade of piano wire.

The cap and release are of solid bronze. The floor plates are cupped to guide the bolt and have oval-shaped holes to take care of shrinkage in the door without resetting plate.



The 10-inch style is designed for heavy garage and warehouse doors. The 6-inch is for ordinary doors, and the 3-inch for double screen doors, cupboards, closets, etc.

10-inch, one in a box with screws; 6-inch and 3-inch, one-half dozen in a box with screws.

Ask your jobber.

HARDWARE AND METAL

Vol. XXVII. JUNE 12, 1915 No. 24

Making Use of Odd Corners

In Nearly Every Store There are Valuable Display Spaces Going to Waste — Some Have Degenerated into Junk Corners—What Was Accomplished in One Store—Seasonable Interior Displays.

By HENRY LEWIS.

IN almost every store — hardware stores included—you can find one or more corners which could be improved to the mutual advantage of employer, employee, and customer. Just take a look around your store—right this minute from where you are standing—and see if there is not what might be termed a "junk corner." In nearly every store there are corners that could be improved in appearance, and by improving the appearance of the corner you make it more attractive for clerks and customers and more convenient for serving your customers.

"Junk corners" are found in different places. In some stores they are found near the rear of the store — in others they may be in the basement or on the second floor, while very often "junk corners" may be found right in the main store interior, or behind display stands, beneath or behind counters or in any one of a dozen different places.

The writer recently visited a store that does an exceedingly large paint trade. There was a heavy stock of paint on hand—all nicely arranged in tiers of shelving. The display would have been almost perfect had it not been for the disorderly appearance of the last tier, or in other words, junk tier. The last tier held dust cloths, a window brush and rubber, a bung borer, and a general accumulation of tools, etc., used around the store. How much better the paint department would have looked if the last tier of shelving had been neatly filled in with packages of paint or varnish.

I visited another store, and in looking for the junk corner I was surprised to find it about half-way back in the store. In this store a large revolving rack occupies a considerable space and is used for displaying garden and lawn tools of various kinds. Between the large rack and the wall there was a splendid accumulation of bicycle parts, canvas sacks, rakes and hoes with broken handles, two or three rakes with teeth broken out, a damaged sprinkling can

Illustration No. 1 showing how display was arranged in a corner of the store interior. Read accompanying article for particulars.

Illustration No. 2, showing how display was arranged in store interior in space between paint and sporting goods department. Read accompanying article for details.

and several other unsightly articles of hardware—surely not what you would expect to see in a well-managed hardware store. Now, either of these junk corners could be cleaned out in less than ten minutes, by any live clerk. Why are they allowed to remain in their present state? Simply because the clerks and the manager have got accustomed to seeing the disorderly arrangement, and it doesn't look half as bad to them as it does to the customer who only drops in occasionally.

In the retail business to-day there is a great need for retail merchants who will look at things from the customer's viewpoint. Don't put off until to-morrow the cleaning out of the "junk corner," that should never have existed, and that should by all means be cleaned out to-day. Junk corners not only create a bad impression on customers, but they occupy valuable space that could in all probability be used to advantage in displaying seasonable goods.

In every hardware store there is also more or less display space that could be used to better advantage. Very often some corners in the store—this does not refer to junk corners—are not used as much as they should be. There is a growing tendency on the part of some of the largest and most successful retail concerns, to use space near the main entrance to the store for displaying seasonable goods — in other words to have an interior window display.

Just as the front of your store—the show windows—is more valuable than the rear for displaying hardware, so are certain sections of the store interior more valuable than others for display purposes. Accompanying this article are two illustrations of attractive displays that have appeared in a Western Canada hardware store. To the right of the store interior upon entering the main entrance doors a space in the corner, just behind one of the show windows is covered by a canopy. For a long time this space about ten feet square was used as a sportsman's rest, being equipped with seats, table, etc. The idea took splendidly at first and for some time the sportsmen's rest, right inside the main entrance was maintained. It no doubt helped the store in gaining the attention of sportsmen, for in this particular store a large trade is secured from hunters, trap shooters, etc. However, it is sometimes a good plan to change things around, and it was decided that the time had come for using this prominent portion of the store for other purposes. It was decided that this space could be used as an interior window display for seasonable goods. The furniture that occupied space in the sportsmen's rest was removed and the space formerly used as a rest room and quite often as a parcel room, was turned to good account. Fig. 1 shows the display that was arranged in the space. Instead of a sportsmen's rest you see a handsome display of goods in which the sportsman is interested. The ledge holding the shells in boxes, skates, show cards, etc., is 32 inches wide, just ordinary table height, with shelving below for holding stock. The show cards were prepared especially for the display and proved very interesting to local shooters, for they bore information regarding records made by professional shooters. The card referring to T. K. Lee, professional shooter, whose record of 1,999 out of a possible 2,000, stands unbeaten, attracted much attention, and caused considerable discussion. The background for the display was made of wall board, as was also the top of the canopy.

The color scheme was pale green with wine color stencils. When lighted at night the display could be seen from all parts of the store.

Of course, the store in which this change was made, is a very large one, and few stores would have as much space that could be used in this way. However, the same plan could be adopted in a smaller degree in many of the smaller stores.

Another good example showing how an interior "seasonable display" can be arranged is shown in illustration No. 2. The space used is between the paint and sporting goods department, and the lines displayed include varnishes, kalsomines, etc. Customers walking down through the store could not help but see the

A New Gospel of Salesmanship

The Elements that Enter Into the Science of Business Getting

AT a recent convention of the sales organization of The Steel Co. of Canada, Ltd., of Hamilton, an address was given on the fundamentals of salesmanship by the sales manager of the company, George A. Simpson. This address is printed herewith as it presents a new gospel of salesmanship in a most striking and forceful manner. Mr. Simpson's terse and epigrammatic exposition is well worth close attention and study; for it gives a new viewpoint and supplies the inspiration for a closer grip of the problems of the salesman, and a more abiding enthusiasm.

GEORGE A. SIMPSON.

Gentlemen:—

At our last Convention, held in Montreal, I had the pleasure of talking to you on the subject of salesmanship. During the course of my remarks then, I made this statement: "There is no mystery in salesmanship that any intelligent man cannot master if his nature is in harmony with the principles of trade, providing he is blest with good health, a fair amount of common sense, a determination to succeed, and has a full measure of truth and honesty in his make up."

Well gentlemen, the older I get, and the more experienced I become, the more convinced I am of this statement. Salesmanship is not a mystery, it is a science. And it is a science that can be learned and mastered, just as any other profession can.

There are certain fundamental principles that must be studied and understood. There are certain laws that must be obeyed, and certain conditions that must be respected.

These conditions, principles and laws, do not pertain to the impossible or the mysterious, neither are they beyond the reach of the man who is sincere and who is determined to succeed; but they must be taken into account, and reckoned with before we can lay claim to being successful salesmen.

I maintain that the real salesman is the man who is continually sowing seeds that will ripen into profits on future sales—the man who is building up through his study of things as they are, through his personality, honesty and fair dealing, a following who believe in him and respect him; one who is forging a chain of satisfied customers over the entire territory he covers, and thereby creating an influence that not only means other sales, but more links to his chain. Such a man is an asset to the interests he represents, and his services will always be in demand.

Salesmanship is that power resulting from a combination of certain qualities and faculties, mental, spiritual and physical, which enables him who possesses it to successfully influence a high average of those he interviews to purchase, *at a profit*, mark you, that which he has to sell.

I will touch briefly on some of the essential qualifications that are, in my judgment, necessary for the salesman to understand. Take for instance:

The Science of Thought.

Thought is supreme. It is not, as is often supposed, a mere indefinite abstraction or something of a like nature. It is, on the contrary, a vital force, the most vital and irresistible force there is in the Universe.

In our Laboratory experiments, we are demonstrating the great fact that thoughts are forces. They have form and quality and substance and power and, furthermore, we are finding out that there is what we can call "Science of Thought."

Through the operation of our thought forces, we have creative power. The spoken word is nothing more or less than the outward expression of the workings of these interior forces.

The spoken word is in a sense the means whereby the thought forces are focused and directed along any particular line.

This is concentration of thought and there is no question in my mind that if we concentrate and then apply the expression of that thought in well spoken words, we will accomplish our purpose. Neither is there any question in my mind that, if a salesman goes after his prospect with a determination to get the order, and then concentrates his thought on his prospect, and the end he wishes to accomplish, he will, if he expresses himself right, land the order.

Thoughts are forces—"Like builds like, and like attracts like."

If we govern our thinking, we determine our life.

The law of attraction between mental and material things is wonderfully exact in its workings. People ruled by the mood of gloom, attract to them gloomy things. People always discouraged and despondent do not succeed in anything, unless it is in making other people unhappy. They live only by burdening others.

The hopeful, confident and cheerful attract the elements of success, and they become a power and an influence for good in any community. In a salesman a disposition of this kind is invaluable, and if steadily practised, would make him the despair of his competitors, and establish as a shining example a well balanced and successful salesman.

This may be new sales gospel, but it has proven to the satisfaction of all real students of business that the most successful man is he who is sure of himself. He who is optimistic and cheerful impresses the world with the fact that he is supremely confident always; and the world of business has every confidence in the man who has confidence

in himself. If our outlook is optimistic, and our confidence strong, it naturally follows that we inject enthusiasm and clear judgment into our work, and therefore we have a tremendous advantage over those who are inclined to be pessimistic and nervously fearful that their judgment may be wrong, those who lack confidence that comes with a right condition of mind, which counts so much for success in a salesman's career.

In our mental lives we can either keep hold of the rudder and steer the course to success, or we can fail to do this, and drift on to the rocks of failure.

There is in connection with the thought forces, what we may term the drawing power of mind, and the great operating law in this connection is identical with that great law of the universe, that "Like attracts like." We are continually attracting to us forces and conditions most akin to those of our own thoughts.

The Law of Attraction.

The law of attraction works universally on every plane of action, especially in the field of sales, because no-one will buy from a man he does not like, unless he has to. Therefore, it is necessary and essential that every salesman study the Law of attraction.

If we desire one thing, and expect another, we are like a house divided against itself—bound to fall.

We must first determine resolutely to expect only what we desire; we will then attract only what we wish for.

Carry any kind of thought about you, and as long as you retain it, you will unceasingly attract to yourself, knowingly or unknowingly, exactly and only what corresponds to your dominant quality of thought.

Thoughts are our private property, and we can regulate them to suit our tastes entirely, by steadily recognizing our ability to do so.

This being so why not study and apply our thoughts to reinforce our power of attraction and to draw closer to us those with whom we do business?

It is possible, and I can assure you it will lessen your work and increase your sales.

If you do not feel kindly towards a buyer, change your mental attitude. In other words, change your thought, and make an effort to attract him towards you, and just as sure as you do, his manner will change, and your orders increase, because the law of attraction is absolute.

And the salesman who is always cheerful, hopeful, confident, courageous, and determined, on his set purpose, will, if he keeps to that purpose, attract to him powers favorable to that purpose.

Honesty and Truth.

Honesty and truth travel hand in hand. They are two very important factors in successful salesmanship, yet there are thousands of so-called salesmen who are daily practising deceit, thinking and believing they are putting it over. What fools! ! I'll grant, "You can fool all the people some of the time, and some of the people all of the time, but you cannot fool all the people all of the time," and there will always be so great a number that can't be fooled, that success along these lines is impossible.

I'll grant that many an honest man talks in a dishonest way, because he thinks he is meeting the dishonesty of the other fellow. It is easy to make a man honest with you by being honest with him.

We should be exceedingly careful in our statements, and, when the time is right to express ourselves, we should do so in a straightforward and honest manner, being careful at all times to temper our talk with QUALITY not quantity. It is not what a man knows, but what he thinks he knows that makes him indulge in quantity. Some one has said, "A real salesman is one part talk and nine parts judgment, and he should use the nine parts of judgment to tell him when to use the one part talk." Talk is necessary in making sales, but falsehood, dishonesty, and deceit, are not. Temporary success may be gained that way, some sales may be made, but permanent great and lasting success is not built on that sort of foundation.

Sentiment and Tact.

There is sentiment in business, and a whole lot more than we realize; when there is none, I shall quit doing business. For a salesman I know of no other quality more helpful to his success than sentiment; if he will use sentiment and tact to reach the sentimental side of his prospect.

I do not mean by that, that he start an investigation or search for sentiment; for if he did that would be calculation and, even if he discovered it he could not make use of it, as sentiment must be discovered by sentiment to be of mutual advantage in preparing common ground.

I have had scores of instances in my experience that have proven beyond doubt the truth of my contention.

Loyalty.

Someone has said, "An ounce of loyalty is worth a pound of cleverness." I say it is worth a ton, because loyalty is the spirit akin to sincerity and enthusiasm; and enthusiasm is the visible manifestation of our inward thoughts. As Emerson says, "Nothing great was ever achieved without enthusiasm." It expresses faith and optimism—Faith in yourself, faith in your employer, faith in the things you sell, and faith in your fellow-men.

Loyalty is a broad-side of force that the enemy cannot stand. It sustains us when the battle is raging, and it cheers us when the victory is complete. It triumphs over obstacles, defeats defeat and laughs at failure.

Finally, salesmanship is the science of selling goods, making sales, and writing the contract between buyer and seller so plain and satisfactory to both parties, that all misunderstanding or explanation is eliminated, to the end that the business relation is mutually profitable to all concerned.

It is not the act of talking about selling goods, or compiling a "Book of Hows," or writing a paper defining how it can be done according to the "Book of Rules," because there is no book of rules that can intelligently govern a man's actions, who is worthy of the title "salesman;" neither is there a "Book of Hows" applicable to the many and varied conditions that a salesman encounters. Furthermore, no one is capable of making a programme for him to follow, because no one knows as well as he does, what he can do best. Every sale and every prospect is different, and must be handled accordingly, and it is the ability to successfully apply the fundamental principles of salesmanship that entitles him to the name of "Salesman."

A man who carries an order book and samples, but whose volume of sales is not sufficiently large to cover his expenses and leave a fair margin of profit on the right side of the ledger for his employer, is no more entitled to the name of "Salesman" than a man who blows a tin whistle is entitled to be called a musician, or a man who goes to sea to be termed a master mariner.

Therefore, it is not "How to do it," that I am bringing to your attention, but "How it can be done." I am not propounding or advocating tricks of trade, but I am defining and recommending the study and application of the accepted and logical science underlying the principles every salesman, worthy of the name, knowingly, or unknowingly applies.

* * *

George A. Simpson was born near Cheltenham, England. He attended school in Cardiff and Pontypool. At the age of thirteen, after the death of his parents in 1881 he went to sea. Returning to Pontypool he went to work in the puddling department of the Pontypool Iron and Tin Plate Company, and later was associated with the Panteg Steel Works in the machine shops and steel casting department. In 1886 he went to Pittsburgh, going direct to the mechanical department of the Sligo Rolling Mills.

During later years Mr. Simpson devoted considerable thought and study to efficiency and organization, and later to advertising and sales promotion.

He was associated for a number of years with the Struthers Furnace Company of Cleveland, as sales agent with headquarters in Pittsburgh, and for years previous to becoming associated with the Steel Company of Canada was connected with the Burger interests of Canton, Ohio, as Special Representative.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, JUNE 12, 1915 No. 24

THE HIGH cost of price-cutting is one of the big subjects confronting the Canadian hardware trade, not only in the retail end but in others as well.

* * *

BECAUSE YOUR debtor has successfully avoided you at the end of one month is no reason why he should be given to the end of the following month to pay up.

* * *

AN ONTARIO hardware merchant was fined $10 this week for selling a revolver without police permission. Other hardwaremen should again take warning. The provisions of the law governing the sale of arms and ammunition have been given in detail in Hardware and Metal several times. Retailers can secure a copy of the Act by sending a request to the Editor of Hardware and Metal, Toronto.

The Markets

FOLLOWING the declaration of war, and again following the changes in the tariff, the hardware markets were more or less in a state of turmoil. Price changes were made right and left to meet the new situation which had been created. Since then, a goodly number of price changes have taken place each week, but the last ten days have probably broken records for rapid and stiff price advances. The market reports this week refer to many important changes which have taken place. The retail hardware trade realizes to-day more than ever before the very direct bearing the metal markets have in governing the prices of the varied lines of goods that are distributed through the retail hardware trade. Let us take for example, spelter. The spelter situation has been followed closely each week in Hardware and Metal's market reports, and in many cases retail hardware merchants have had the foresight to take Hardware and Metal's information on the spelter situation, and use it to advantage in buying ahead certain lines of goods which were bound to advance as a result of the continued advance and high price of this metal. A few of the lines of goods which have advanced as a direct result of the spelter situation are: Sheet zinc, washboards, zinc in oil, dry zinc, poultry netting, galvanized sheets, galvanized wares, including tubs, pails, sprinklers, etc., galvanized pipe, eavestrough, fence wire and staples, galvanized rope and many other lines. Lead is now on the upgrade. Many times during the period when lead remained almost dormant, and all other metals were soaring, the matter was referred to in our market reports and the prediction made that lead's turn would come sooner or later. Last week the climax was reached and the developments began. Higher prices were predicted. This week advances in price affect, among many other lines, white lead in oil, to the extent of $1.50 per 100 lbs., shot, sheet lead, lead pipe, lead fittings, dry white lead, red lead, solder, babbit and other lines. Every retail hardwareman should follow the metal markets closely, and in addition to studying the trend of metals, he should also study the effects that are bound to follow on various hardware lines in making of which the metals are an important factor.

A Period of Tension

PRESIDENT E. G. Henderson, of the Canadian Manufacturers' Association, in his summary of industrial conditions, at the annual meeting of the association held at Toronto this week, expressed the opinion that we have passed the worst, and from now to the end of the war, business should steadily improve. The President, however, followed his optimistic prediction with a warning to the members not to look for an immediate return of prosperity to Canada after the war, but to prepare themselves for a period, not necessarily of hard times, but of tension, that will call for all available resourcefulness and enterprise. President Henderson said in part: "I feel it will be a period that will witness on a considerable scale the weeding out of inefficiency, and place us under the necessity of cheapening our methods of production and improving the quality of our products. For this reason I attach great importance to the proposal that we should equip ourselves quickly and effectively for undertaking research work of every kind related to our resources, and I sincerely hope that plans now under advisement will be brought to early fruition."

Are German Interests?

FOR some time past the whole trade has been watching with some degree of alarm the development in spelter. The market has been soaring and record-breaking prices have prevailed, in fact the market is almost at a standstill and large inquiries from galvanizers are few. As a result of the continued high prices many hardware lines have advanced in price at a rapid rate during the past few weeks. Large buyers of spelter in the United States are backward in coming forward. There are rumors going the rounds in the leading metal centres in the

United States to the effect that German interests are buying up supplies of spelter in order to keep it away from the ammunition makers, and it is claimed that there is evidence to the effect that very large purchases have been made by firms who do not regularly use spelter themselves and who are known not to hold any war contracts. It would be very interesting to know what these firms intend to do with the spelter they have purchased. It is well known that Germany cannot stop the exportation of ammunition from the United States to the Allies, but she may try to secure control of large quantities of raw material needed for ammunition making and thus try to limit the exports to enemies. Reports are circulating that German interests have been trying to secure control of some of the largest gun and ammunition works in the United States and it is quite possible that she has been working through agents in buying up spelter—a very important metal just now. One thing is certain, Germany cannot control the spelter situation by adopting measures of this kind. The British intend to have all the ammunition they require, regardless of cost, and can over-bid Germany on any needed supplies. The greatest danger lies in the fact that the American consumers are the real sufferers. Referring to this American Metal Market, one of the leading authorities in the United States, says: "The real sufferer is the American consumer and it may be part of the German program to make matters so bad for our users of spelter that our Government will be induced to put an embargo on the exports of spelter and spelter products, including brass goods. We cannot imagine conditions becoming so bad as to warrant such an action, but if it should happen by any chance it would knock the spelter market into a cocked hat, as we are producing nearly twice as much spelter at the present time as we are using for our own industrial requirements. If an embargo was placed on the metal it would be dear at 6c per pound."

Before the war, the world's three largest producers of spelter were as follows: First, Germany; Second, Belgium; Third, United States.

The Advance in White Lead

READERS who have been following the markets closely will not be surprised at the sudden developments in the white lead situation. Following the outbreak of the war last August, nearly all metals, with the exception of lead, advanced rapidly in price, and in some cases reached record-breaking high prices. Lead remained practically unchanged until a short time ago when it became evident that there would be an upward movement in the price of lead. It has been claimed for some time past that lead was altogether too low when prevailing prices on other metals were considered, and while advances were expected, few expected them to come so rapidly. Despite the rapid rise in prices during the past two weeks and the present high prices, there are some who claim that lead will go still higher. There is one thing certain and that is that the market at present is governed too much by speculation and the market is in some respects unhealthy.

Hardware and Metal stated last week that an advance in dry white lead had taken place and that lead in oil would follow immediately. This proved to be correct, for shortly after Hardware and Metal had gone to press the advance took place. The advance of 75 cents per 100 lbs. was followed by a further advance of 75 cents per 100 lbs. this week, thus making an advance of $1.50 per 100 lbs. in white lead within one week's time. The prices now quoted for white lead at Toronto and Montreal and at other delivery points are for immediate acceptance and delivery. Quotations on many brands of zinc have temporariy been withdrawn.

An American authority in commenting on the lead situation this week, says in part:

"The dealers have taken the bit in their teeth and the rapid rise in prices, 1½c per pound in two weeks, can be attributed to a great extent to the large buying by these interests who have been paying all sorts of prices for future deliveries. The fact that lead sold at an average price of 3.87c New York in 1914 and was easily obtainable a few weeks ago at 4.25c, does not hinder them from believing that the market is going much higher and some of them are even talking 10c per pound.

In a war market ordinary values count for nothing, but it is well to remember that lead can be produced in almost unlimited amounts and that the production of this country increased 100,000 tons last year, although the market was below 4.00c New York, the lowest average since 1898. Our readers know that we called the turn in lead, but we did not anticipate a 50% rise in a fortnight for we did not believe that the metal would attract such an enormous speculation on the part of dealers. We do not say that lead will not go higher but the market at present is governed too much by speculation to be healthy, and the natural law of supply and demand, as applied to production and consumption, does not cut much figure."

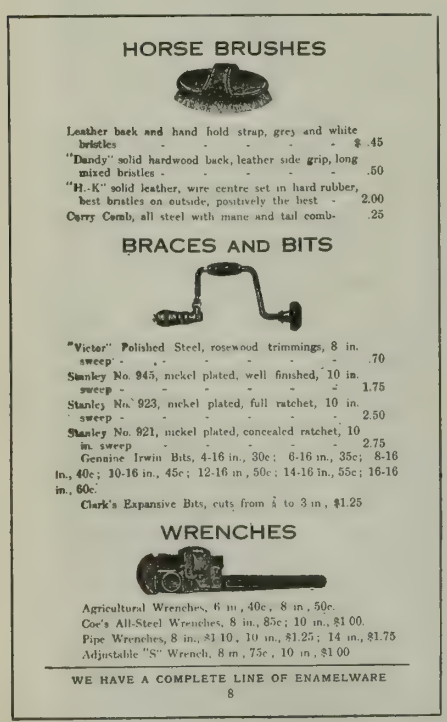
The Metal Situation

METALS are still the centre of interest in the hardware markets and many sudden changes have taken place in quotations on hardware products during the week. Many of the price advances were not unexpected owing to the recent developments in metals, and the fact that these developments have a direct bearing on many hardware products. Spelter is still the chief sensation and continues to make records. Products into which spelter enters are being affected in every direction and among the many lines affected this week are galvanized sheets, galvanized pipe, sheet zinc, fence wire, fence staple, poultry netting, wire rope, and many other lines. Spelter is now quoted at prices which beat all previous records. Lead has been very much in the limelight for the past two weeks, after a long period of quietness and although stiff advances have been made further advances are looked for. The advances in lead have caused advances in sheet lead, lead pipe, pipe fittings, dry white lead, lead in oil, red lead, shot and other lines. Tin is in strong demand, and copper is still booming. The general situation remains much the same as last week, there is no diminution in the demand for metals used in making munitions of war and it is impossible to say where prices will end. It is freely stated that makers of galvanized sheets are losing money at present prices and that sheets should be 1c to 2c per pound higher than they are at the present time.

B. C. FIRM ISSUES CATALOGUE.

Wagstaff & Vestrup, Nakusp, B.C., recently issued an attractively gotten up ten-page catalogue of implements, haying and garden tools, dairy supplies, harness, paints, water and spray pumps, sprays, motor supplies, fishing tackle, shelf hardware, etc.

Two pages from the catalogue are reproduced herewith. The inside front cover shows a large cut of a plow for illustrative purposes. The goods featured on this page include plows of various kinds, scufflers, harrows, mowers, rakes, etc.



Page 3 features haying and garden tools, barn-door hangers, etc. Page 4 features dairy supplies, such as churns, butter prints, and ladles, spades, bowls, milk pails, delivery pails, milk cans, measures, milk pans, etc. An illustration of cylinder churn appears at the top of page 4. Page 5 is devoted to harness, the following lines being featured: collars, sweat pads, traces, team lines, hame straps, breast straps, team martingales, halters, snaps, buckles, axle grease, harness oil, whips, etc. An illustration of a horse collar appeared at the top of page 5. Page 6 is used to feature the various lines of paint and varnish carried in stock. Page 7 is illustrated with a cut of a water pump, and the goods featured on this page include house and well pumps, spray pumps, spraying materials, etc. Page 7, reproduced here, features horse brushes, braces and bits, and wrenches. It is interesting to note that the cuts used to illustrate this page and others in the catalogue were supplied by Hardware and Metal's electro service department.

Page 9 features baseball goods, such as baseballs, gloves, mitts, tennis balls, etc., and also cutlery lines, particularly lines used for pruning purposes. Page 10 also reproduced here, is used to feature motor supplies, including batteries, battery connectors, spark plugs, connection wire, priming cups, relief cocks, copper tubing, quick action switches, pumps, cylinder oil, cup grease, brass fittings, wrought iron fittings, etc.

The inside back cover features fishing tackle. Special reference is made to such lines as baits, flies, lines, leaders, reels, rods, landing nets, etc.

The back cover is used to feature furniture, mattresses, camp cots, etc.

The catalogue page measures 6 x 9 inches. Prices are quoted on all goods featured in the catalogue.

HORSE BRUSHES

Leather back and hand hold strap, grey and white bristles	$ .45
"Dandy" solid hardwood back, leather side grip, long mixed bristles	.50
"H.-K" solid leather, wire centre set in hard rubber, best bristles on outside, positively the best	2.00
Curry Comb, all steel with mane and tail comb	.25

BRACES AND BITS

"Victor" Polished Steel, rosewood trimmings, 8 in. sweep	.70
Stanley No. 945, nickel plated, well finished, 10 in. sweep	1.75
Stanley No. 923, nickel plated, full ratchet, 10 in. sweep	2.50
Stanley No. 921, nickel plated, concealed ratchet, 10 in. sweep	2.75

Genuine Irwin Bits, 4-16 in., 30c; 6-16 in., 35c; 8-16 in., 40c; 10-16 in., 45c; 12-16 in., 50c; 14-16 in., 55c; 16-16 in., 60c.

Clark's Expansive Bits, cuts from ½ to 3 in., $1.25

WRENCHES

Agricultural Wrenches, 6 in., 40c., 8 in., 50c.
Coe's All-Steel Wrenches, 8 in., 85c; 10 in., $1.00.
Pipe Wrenches, 8 in., $1.10, 10 in., $1.25; 14 in., $1.75
Adjustable "S" Wrench, 8 in., 75c., 10 in., $1.00

WE HAVE A COMPLETE LINE OF ENAMELWARE
8

Page 10 from hardware catalogue issued by Wagstaff & Vestrup, Nakusp, B.C.

BROWNLEE'S CATALOGUE.

J. A. Brownlee, Talbot street, London, Ont., hardware, tinware, graniteware, stoves, etc., and conducting an exceptionally large sheet metal working department, recently issued a 16-page catalogue featuring various lines carried by the firm. Mr. Brownlee's slogan is, "A Deal at Brownlee's Is Always a Square Deal."

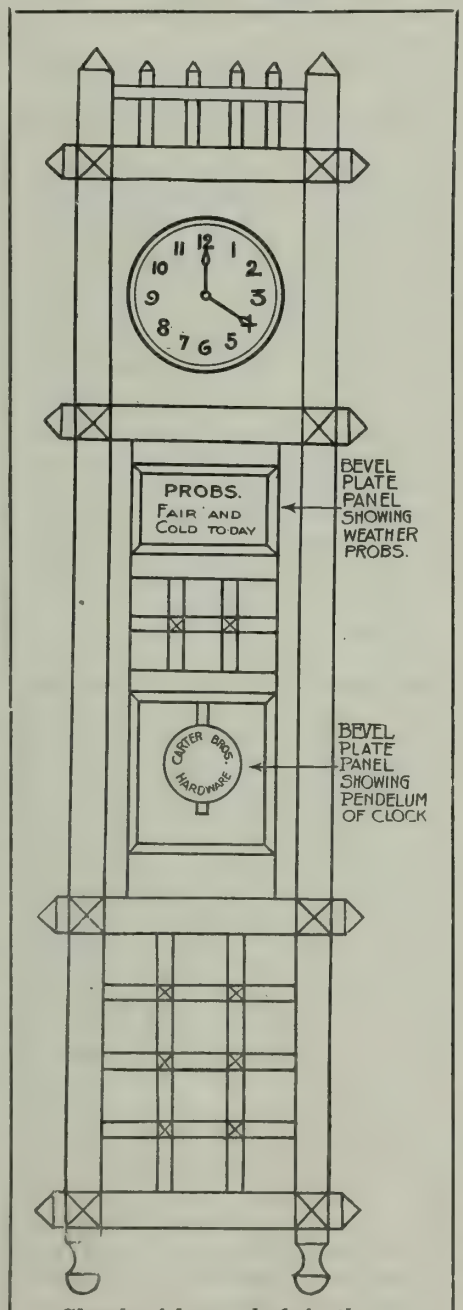
Page from hardware catalogue issued by J. A. Brownlee, London, Ont.

On the front cover of the catalogue appears a likeness of J. A. Brownlee, and immediately below, the following information regarding his business:

"Ten years ago, J. A. Brownlee, who, figuratively speaking, was born with a tinsmith's hammer in his right hand and a soldering pot in the left, opened the store he now occupies at 385-387 Talbot street (opposite Market Square). It was a modest store, and the business was modest, too, because the people of London and district did not know him then as they do now. However, they soon got to know that his word of guarantee was as good as a bond, and that whenever they bought anything at the Brownlee store they could rely upon it being the best. That is why to-day his business is the largest in London."

On the inside front cover of the catalogue reference is made to the various departments of the store, which are as follows:

Hardware, paint, stove, tinware and enamelware, sheet metal manufacturing, and repair department. Under the "Service and Delivery" heading the following appears:



"The growth of our business has made it necessary to add another automobile to our delivery service. Our large motor truck will handle the stoves and heavy hardware. We give prompt and quick delivery of our goods."

The goods featured on various pages are as follows: Page 1.—Paints and varnishes; page 2, tinware, graniteware, galvanized wares, etc.; page 3, screen doors and refrigerators; page 4, household hardware; page 6, sweeping compound; page 7, tools, lawn mowers, step-ladders, etc.; page 8, paints, brushes, etc.; pages 9 and 10, gas ranges; page 11, dustless mops; page 12, metal garages; page 13, coal oil in iron barrels; page 14, barn and house door-hangers, etc.; page 15, garden and lawn hose; page 16, roofing and paving materials page 16, lawn and harvest tools, etc; inside back cover, wall finishes; outside back cover, binder twine, hay-fork rope and other lines in which the farmer is particularly interested.

CLOCK IN STORE FRONT.

IN the Annual Spring Number of Hardware and Metal (March 22 issue) there appeared an illustration and description of the new store front in Carter Bros. hardware store at Picton, Ont. In planning the store front the designer introduced several new and decidedly distinctive features all of which (with the exception of the clock) were described in detail in the Spring Number. The accompanying cut shows the details of the large grandfather's clock which stands in the commodious entrance, and can be viewed by all passers-by on both sides of the street. The clock stands 8 feet 4 inches high.

The frame is of heavy red oak. The face of the clock is exceedingly attractive and large in size. Weather probabilities are shown daily on a bevel plate. The swinging pendulum can also be seen by the passer-by. The name "Carter Bros." appears on the pendulum. As shown in the spring number, portable display stands, the same size as the clock, stand on either side. Seasonable goods are shown on the stands. The clock was designed by Herb Daubney, Picton, Ont. Carter Bros. state that the clock is a splendid advertisement for them. Very few people pass without looking at the time, and hundreds of customers have commented favorably on the novel ideas embodied in the new store front.

Sketch of large clock in the new entrance to Carter Bros. hardware store Picton.

VALUE OF ONE CENT.

Ingram & Davey, Ltd., St. Thomas, recently ran an advertisement in the daily papers under the heading "War Time." The advertisement referred to the purchasing value of one cent and read as follows:

WAR TIME.

The Purchasing Value of One Cent.

To light a 40 watt lamp (36 candle power) for 23 hours.

To make 15 cups of coffee in an electric percolator.

To operate electric chafing dish for 25 minutes.

To operate electric vacuum cleaner for 2 hours.

To warm an electric heating pad for 2 hours.

To run an electric washer and wringer for 1 hour.

To operate electric flat-iron for 2 hours.

To make 22 slices of toast on electric toaster.

"Particularly the Housewife."

We have every electric appliance to lessen the drudgery of hot weather time. Your husband has all office conveniences, tools, etc. "Why not the same in the home?" Call and let us demonstrate our line of HOT WEATHER COMFORTS.

INGRAM & DAVEY, LTD.,
The Big Hardware Store.

UNUSUAL WINDOW DISPLAY.

AN exceptionally novel window display was arranged recently for A. M. Bell & Co., Halifax, N.S., by S. S. Wetmore.

The display which appeared is a miniature reproduction of Berry Bros.' plant, with surrounding features emphasizing the big turn-out of the plant, and its transportation. The plant, as shown in the display, consists of 21 buildings, and there are many chimneys sending forth smoke. In the rear is shown the Grand Trunk station and on a cliff is the aerial warehouse to which packages of Berry Bros.' goods are carried by an endless chain always in motion, for shipment by the Zeppelin. There is a sub-station at the base of the cliff. An air-ship, a hydro-zeppelin, constructed by Mr. Wetmore, floats about the window overhead, passing the aerial station every two minutes, though a notice at the station announces to the public that "owing to atmospheric disturbance it is not safe to land," That explains why

(Continued on page 39.)

The Price of Spelter

Reason for the Advance in the Price of Spelter — Paper Read at the Fourth Annual Meeting of the Metal Branch of the National Hardware Association of the United States.

By W. S. HORNER of the American Rolling Mill Co.

IN the middle of July, 1914, spelter was selling at 4.80c per pound, East St. Louis, the lowest price in five years. The lowest price in history was about three cents in 1895. In the early days of August, just after the war started, spelter declined to 4.72½c. On Aug. 12th, the United States Geological Survey announced its mid-year spelter statistics, showing that the unprecedently large stocks of spelter at the beginning of the year had materially increased during the half year. The unsold stocks in the hands of smelters January 1st, 1914, had been reported at 40,659 net tons of 2,000 pounds, while the stocks on July 1st, 1914, were given at 64,039 tons. The consumption of the United States during the twelve months ending June 30th, 1914, was estimated at 291,750 tons, the stocks reported at the close of the period being no less than 22 per cent. of this quantity.

During the week preceding the issuing of these statistics, spelter had advanced to 5.37½ cents, East St. Louis. Buyers of spelter naturally concluded that the appearance of such extremely unfavorable statistics would operate to depress the market, and as prices advanced further they were confirmed in their view that it was unsafe to purchase. On August 27th a high point was reached, 5.95, and then the market started to decline, reaching a low point of 4.60 on October 13th. This price was 20c per 100 pounds lower than the low point of July, and 12½c below the still lower point reached early in August, after the war had begun. The August advance had occupied 23 days, while the subsequent decline occupied 46 days, or twice as long.

Thus October was half over before the spelter market reached merely the threshold of the spectacular advance which has lately puzzled and concerned the trade. We cannot intelligently discuss this advance and the causes that may have led to it without considering the attitudes that buyers and sellers respectively maintained during the advance.

Let us, therefore, pause for a moment and observe the viewpoints the buyer and seller respectively would occupy at the middle of last October when, after ten weeks of war, spelter was at a lower price than in the early days of the war or just before the war.

Hardware merchants who follow Hardware and Metal's weekly market reports have no doubt noticed the many references that have been made to the phenomenal advances from time to time, since the outbreak of the war last August, in the price of spelter and the consequent effect on the prices of many products in the manufacture of which spelter is used. The accompanying paper read at the fourth annual meeting of the metal branch of the National Hardware Association of the United States deals with the spelter situation in a very thorough manner and should prove interesting to every hardware merchant as well as to manufacturers who use spelter.

The buyer well remembered the spelter advance of two years earlier, culminating in a price of 7½ cents a pound on September 20th, 1912, the highest price in history and three-quarters of a cent above the previous high point reached in 1907. The 1912 advance had been generally regarded as due chiefly to manipulation. Upon the inception of the European war the buyer had been told that the war would advance spelter because England's supplies from Belgium and Germany would be shut off, but with the example of the ephemeral advance in August and the subsequent decline to a lower point than ever the buyer was disposed to dismiss the subject with the observation that when he had not been fooled on the first advance he certainly would not be if there should be another. Presumably it would be simply manipulation.

The sellers, on the other hand, observed that they actually were selling spelter to England and that the brass makers of New England were buying spelter not merely for prompt delivery, but for deliveries far into the future.

A misunderstanding then arose between buyers and sellers, and whether this misunderstanding was encouraged by the sellers is, I think, a debatable question. After the low point of 4.60 was reached on October 13th, the market was subject to frequent and sudden advances, that looked manipulative, with intermediate declines of less extent, until in December a fairly steady market was established at about 5½c. The majority of buyers, except probably the brass makers, thought the market had been manipulated upwards, and were in no mood to buy at prices about a cent a pound above the previous low point.

These buyers eagerly looked forward to the publication of the Geological Survey's semi-annual statistics of production of spelter and unsold stocks in the hands of producers, expecting the statistics to show but a small decrease, possibly even an increase in the stocks as compared with the large stocks reported for July 1st, but on January 4th, the United States Geological Survey announced that the usual statistics would not be published, because it had been impossible to obtain figures from some of the producers.

At once the buyers adopted the view that the sellers had large stocks and wished to conceal the fact. Some of the sellers suggested that the stocks were really very small, and that it was desired to conceal their smallness until the market had advanced further. If this really was their view, it was a very sensible one, for the market advanced more than four cents a pound in less than two months, and if the buyers had had confidence in the market they would have been able to cover against a large part of the advance.

It is desirable to trace in some detail the course of prices since the opening of the year. On the last day of December the market stood at 5½c, East St. Louis, less than one cent a pound above the various low points that had been touched successively in July, August and October.

Then the changes per month were as follows: In January, advanced 2.20 cents; in February, advanced 2.55 cents; in March, declined .95 cents; in April, advanced 4.45 cents.

This made a total advance in the four months of 8½ cents, and left the market May 1 at 13¾ cents, about three times the lowest price of 1914 and more than 6 cents above the highest price ever attained prior to this year.

The question assigned me was "Why did spelter advance?" but before attempting to discuss the possible reasons for the advance it has seemed desirable to show precisely the extent of the ad-

vance and also to show how the market behaved during the advance. At times there have been strong suspicions that the advances were manipulated, but viewing the course of the market during the entire period of the war, it does not look like a manipulated market. Manipulators desire to create confidence in the minds of the buyers, so that they will buy. Profits are not realized merely by marking up quotations; there must be actual buying at the advanced figures. The July advance, followed by a still greater decline, was precisely the thing to prevent confidence, not to instill it. Again, in a manipulative movement there are usually sharp advances at first and slower advances afterwards, as the manipulators approach the point beyond which they cannot go, but in this instance the advances became more rapid as time passed.

I am not prepared to express an opinion whether or not the European war has furnished a sufficient cause for all the advance that has occurred in spelter, but that it has furnished adequate cause for a very considerable advance is beyond question. To avoid complications I shall use as few figures as possible.

World's Production.

The world's production of spelter in 1912 was 1,070,045 net tons, and in 1913, 1,093,635 tons, this not including the production of secondary spelter, from drosses, etc. Of the 1913 production, Germany and Belgium made 530,003 tons or no less than 48½ per cent. The war has greatly reduced this production, and of what production there is, there are no exports. The German and Belgian exports were about 145,000 tons to England and about 40,000 tons to other countries, before the war, indicating that before the war the spelter consumption of the world outside of Belgium and Germany was about 750,000 tons. The production of the United States in 1913 was 346,676 tons, with neither exports nor imports of any consequence.

The actual exports of the United States from July 1st, 1914, to April, 1915, were 102,397,404 net tons, for the nine months, but as the movement did not really start until September, the exports in the seven months ending with March were at the rate of approximately 170,000 tons a year, against the rate of 185,000 tons a year at which Belgium and Germany had previously exported spelter.

The effect of the war upon the consumption of spelter, however, must also be considered. One effect was to reduce very materially the consumption of spelter in the arts of peace.

Great Britain's exports of galvanized sheets, for instance, were 129,239 tons in the seven months, August, 1914, to February, 1915, against 612,047 tons in the seven months a year earlier, showing a decrease on no less than 79 per cent. In the United States the actual consumption of galvanized products may possibly not have decreased, but floating stocks of galvanized sheets and other galvanized products have been reduced as much as possible, so that the consumption of spelter itself has been reduced temporarily at least.

On the other hand, the war has caused a very large demand for cartridges, involving the consumption of brass, made from approximately two parts copper and one part spelter. The statistics of exports from the United States, comparing the nine months ending March, 1914, with the nine months ending March, 1915, show an increase in brass, in bars, plates, sheets, etc., from 4,162,556 pounds to 22,051,699 pounds, which would represent in spelter an annual rate of, say, 5,000 to 6,000 net tons. In articles made from brass, on which only the value is reported, there was an increase of $1,300,000 in the nine months, obviously representing only a negligible quantity of spelter.

In cartridges, which the Government reports under the heading "explosives," there was an increase from $2,541,258 to $9,570,077. While it is impossible to estimate what proportion of this value was represented by the spelter involved, it is evident that the tonnage could not have been large, because if the entire value lay in the crude brass, allowing nothing for the cost of making and loading the cartridges, the spelter required would be only at the rate of 10,000 to 20,000 tons a year. The actual spelter involved, therefore, was inconsequential.

Nevertheless, the brass mills in New England have for months been reported as very busy. Either they are making products which are not returned in the Government export statistics as brass, manufactures of brass, or cartridges, or it does not require a very large tonnage to make them busy.

The exports of brass in various forms may, however, increase somewhat in future, and, seeing that the exports of spelter in the seven months ending March 31st were at the rate of 170,000 net tons a year, the new demand upon the United States for spelter and brass may be forecast at 175,000 to 200,000 net tons a year, representing from 48 to 55 per cent. of the United States production in 1913.

Naturally so large a demand cannot be created suddenly without the metal becoming relatively scarce. The only question is how scarce, and what price the scarcity will justify, whether three times the low price of 1914 and practically double the highest price prior to the war, or some other higher or lower multiple of these prices.

There is also a question whether or not there are concealed speculative stocks in the United States. Obviously, if there were such stocks they would be very carefully concealed, for the holders would be playing for such high stakes that no chances would be taken.

UNUSUAL WINDOW DISPLAY.

(Continued from page 37.)

the airship does not stop at the station. The aerial station is fitted with telephone, searchlight and klaxhorn.

A train of four or five cars moves about, enters the railway station to load up with goods, calls at the substation, and then crosses a 9-foot trestle work. Near the railway station are the Detroit and Cleveland navigation piers, standing out in mirrored water, and at the piers are two miniature steamers very completely equipped, loading goods.

There is also the Michigan Central station near the centre of the display, built of varnish cans and the gums from which the varnish is manufactured. The steps leading to the station entrance are packages of stain; while to the front is a lake and a rockery, built of varnish gum. At the base of the cliff is shown a pretty effect of varnishes inlaid in crimson paper touched with gold.

Near the Grand Trunk sub-station a big water-power wheel revolves and close to it are a water tank and the tank-man's shanty. A train going in each direction from the Michigan Central depot lends to the busy effect.

The little electric train constantly operating travels a circuit of 40 feet and is covered with Berry Bros.' advertising matter, the tone of which pervades the whole display, and "Halifax, the Gateway of Canada" looms up large in the transportation connections. The buildings, trains and ships, including the hydro zeppelin, were built from wood and paper by Mr. Wetmore, and the cliff and rock effects, etc., are of materials suitable, but outside of these, varnish cans and the different grades of gum from which they are manufactured make up the construction materials of the display, while in the extreme rear is a very pretty scenic sunset effect, from Mr. Wetmore's brush. The mechanical part of the combination which is visible only behind the scenes is as wonderful as the effect from the front and is all of Mr. Wetmore's own construction, electricity being the power utilized.

To dress suitably for your work does not mean that you are at liberty to offend your customers by wearing dirty working clothes.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Fire Losses.

Russell, Ont. — In the recent disastrous fire in the business section of this town the tinsmithing business of D. W. Murray was destroyed.

Hardwaremen Enlist.

Jas. A. Moir, of the Winnipeg office of Beatty Bros., Ltd., has enlisted for active service with the 44th Battalion, and is now in camp at Sewell, Man.

Lieut. J. A. Dalton, of W. B. Dalton & Sons, wholesale hardware, Kingston, Ont., has enlisted for active service with the 39th Battalion at Belleville, Ont.

To Represent Ontario Division.

W. H. Lamont, credit manager, H. S. Howland, Sons & Co., Toronto, and vice-president Ontario Division Canadian Credit Men's Association, will represent the Ontario division at the National Council to be held at Winnipeg, June 22-23.

Clean-Up Movement

In Cowansville, Que., the clean-up movement amounts to a general order on the part of the Board of Health for a cleaning-up of all premises during the first two weeks in June. A general inspection will be made and offenders against the civic legislation will be penalised according to law.

Dominion Incorporations.

St. Lawrence Machinery, Ltd., capitalized at $50,000; head office, Montreal. To carry on the business of tool makers, brass founders, etc.

United Specialties Mfg. Co., Ltd., capitalized at $50,000; head office, Montreal; to take over as a going concern the United Specialties Mfg. Co., Montreal.

Personals

Chas. F. Hemmenway, formerly connected with Smith Hardware Co., Montreal, who have since discontinued business, is now travelling direct for Smith & Hemmenway Co. of New York, calling on the wholesale hardware trade in Ontario and Quebec. D. G. Smith of the same firm is now on his way through to the Pacific Coast taking in all important points.

At the Front.

Corp. W. T. Hall, of the Queen's Own Rifles, Toronto, is reported wounded. Before enlisting, Mr. Hall was in the hardware department of the T. Eaton Co., Toronto.

L. J. Stewart, who enlisted with the 90th Winnipeg Rifles at Winnipeg, is reported wounded. Before enlisting, Mr. Stewart was with the Consolidated Paint and Glass Co., Winnipeg, Man.

Business Changes.

New Toronto.—F. J. Hicks has sold out to W. H. Reveley.

Bawlf, Alta.—D. A. Fraser has taken over the hardware business of Molstad & Anderson.

Fredericton, N. B.—Lawlor & Cain have dissolved partnership, Joseph A. Cain continuing.

Balmoral, Man.—D. McLaren, hardware and furniture, has been succeeded by McLaren & Barbour.

Saltcoats, Sask.—I. G. Crossley, hardware and implements, has been succeeded by T. J. & A. Warren.

Preston, Ont.—Frank Melton has resigned his position as manager of the Canadian Buffalo Sled Co. William Ewald, formerly manager Canadian Machinery Corporation branch, at Hespeler, has taken over the management of the Canadian Buffalo Sled Co.

Addition to Plant

The Swedish Crucible Steel Company, of Canada, Limited, Windsor, Ontario, are putting up a large frame addition for temporary use, they will erect a large cupola which will give them a capacity of an additional 100 tons of gray iron, or a total capacity of 120 tons. The cupola will be 42 feet high. Other buildings will be erected for the fall's business. They report a very good increase in business for the month of May. A number of new pieces of machinery have been added to increase their working facilities.

Placing War Orders.

Purchases of $100,000 worth of construction material of all descriptions, from cement mixers and diving outfits to chisels and hammers were recently made from Canadian manufacturers and distributors by the Canadian war purchasing committee. W. Shives Fisher, a member of the firm of Emerson and Fisher, of St. John, N. B., represented the commission in connection with the majority of the negotiations. These materials are to be used in connection with the operations of the Canadian Overseas Railway Construction corps, organised some time ago by the C.P.R.

Winnipeg Firm Branching Out.

On the 1st of June a change of interest to the hardware trade of Western Canada was effected, when the O-rib-O Manufacturing Company, Ltd., through its president, Mr. J. Brockest, bought out the business of F. J. C. Cox & Co., Winnipeg, who for some years have been sellers of building paper.

The O-rib-O Manufacturing Company bought the F. J. C. Cox warehouse on Bannatyne street with the business, and will continue to keep the roofing stock there. This roofing will be marketed through the organization now handling the line of sheet metal products which the O-rib-O Company manufacture, and the Enterprise stoves and furnaces for which Mr. Brockest recently secured the Western agency.

Mr. S. R. Frankling, who has been acting as manager for F. J. C. Cox & Co., now joins the O-rib-O Mfg. Co. as sales manager.

WHAT OUR READERS SAY.

Like all good papers, Hardware and Metal occasionally receives a cancellation. The following, received a short time ago, is typical of the few received:

Souris, Man.

Hardware and Metal,
Toronto, Ontario.

Gentlemen:—

Having sold our hardware business, we ask you to discontinue your paper. We have just received our Spring Number and consider it the best you have yet gotten out. Containing as it does many suggestions that are bound to be a great help to every hardwareman that follows them. We have been subscribers for many years and in every issue have found some idea that was a help in our business.

Yours truly,
CURRY & MITCHELL.

Using Twelve Autos.

The travelling staff of H. S. Howland, Sons & Co., Ltd., Toronto, is now using twelve automobiles, four having been added during the past few weeks. The travellers now using autos in calling on the Ontario retail hardware trade are as follows:—J. C. Northcott, London, Huron and Bruce District; H. D. Wilson, Muskoka District; W. H. Cruickshank, North of Toronto District; F. L. Smith, Owen Sound District; J. N. Kidd, Eastern Ontario District; J. R. Johnston, London District; W. A. Fetherston, Rural Districts; L. Ross, North Shore District; S. Thompson, City of Toronto; W. B. Baiden, City of Toronto; P. C. Rodger, City of Toronto; W. F. Cotton, City of Toronto;

W. L. HELLIWELL,

General manager, Gurney North-West Foundry Co., Winnipeg; president, Canadian Credit Men's Association, Winnipeg. A meeting of the National Council of the Association representing all branches will be held in Winnipeg during the week commencing June 21.

To Meet in Winnipeg.

The National Council of the Canadian Credit Men's Association, Limited, Dominion-wide organization, formed in the interests of wholesalers and manufacturers granting credit, will hold its annual meeting in Winnipeg on the 22nd and 23rd of June. Delegates will be present representing the different provinces of Canada.

The association, which was formed in 1910, has grown rapidly, and organized, as it is, with a view to the promotion of high ideals in business and a higher plane of public morality with respect to credits and credit granting, it is easy to understand why it has been possible for this body, starting from a mere handful of credit men, to form a Dominion-wide organization, with branches in all the principal cities of the country.

Hardware Letter Box

Moulding for Maps

Doherty Bros., Kinmount, Ont.—Will you please give us the names of some firms who handle mouldings for the top and bottom of maps.

Phillips Mfg. Co., Carlaw Ave., Toronto, Ont.

Geo. H. Hees & Sons Co., Ltd., 52 Bay Street, Toronto, Ont.—Ed.

Gasoline Irons

The E. J. Coles Co., Woodstock, Ont. Could you give us the names of firms who are manufacturing Gasoline Irons.

Taylor-Forbes Co., Ltd., Guelph, Ona.

Acorn Brass Mfg., Co., Aurora, Ont.

National Stamping & Electric Works, 418 S. Clinton St. Chicago, Ill.

Royal Iron Mfg., Co., Big Prairie, Ohio.—Ed.

Address of Mining Publications

R. Chesnut & Co., Fredericton, N.B.—Will you kindly furnish us with names and addresses of Mining Journals published in England.

The Mining Magazine, Salisbury House, London, E. C.

Teh Mining Journal, Mansion House, 15 George St., London E. C.—Ed.

"Koted" Paper.

McKinley & Northwood, Ltd.,Ottawa, Ont.—Please advise us if you know of a building paper called "Koted" paper and if so kindly advise where we can procure same.

Bird & Sons, Heintzman Bldg., Hamilton, Ont.—Ed.

CATALOGUES AND BOOKLETS

Lathe turrets made by Fay & Scott, Dexter, Me., are dealt with in a bulletin recently issued. The illustrations show some new designs of lathe turrets, carriage and bed types, particularly adapted to the manufacture of shrapnel shells. A brief description is given of each style together with tables giving the principal dimensions and other particulars.

The Westcott Chuck Co., Oneida, N. Y., are distributing a leaflet describing the Westcott spur geared scroll cutting-off chuck, especially adapted for shrapnel shell work. The essential features of this chuck are described, and a table is included giving the principal dimensions of each size.

WEEKLY HALF HOLIDAY.

(Continued from page 31.)

STAYNER—No half holiday.

SIMCOE—Thursday afternoon, June, July, August, September.

SMITH'S FALLS—Wednesday afternoon, June, July, August.

TAVISTOCK—No half holiday.

THORNBURY—Thursday afternoon, June, July and August.

TILLSONBURG—Wednesday afternoon, June, July and August.

C. S. WOODS,

Recently appointed Central Ontario traveling representative of Beatty Bros., Ltd., Fergus, Ont.

TRENTON—No half holiday.

THOROLD—Wednesday afternoon, June, July, August.

UXBRIDGE—No half holiday.

WATERLOO—Wednesday afternoon, during June, July and August.

WALKERTON—No half holiday.

TILBURY—No half holiday.

WELLINGTON — Thursday afternoon, June, July and August.

WELLAND—Wednesday afternoon, June, July and August.

WHITBY—Thursday afternoon during July and August.

WEST LORNE—No half holiday.

WEST TORONTO—Wednesday afternoon year round.

WINDSOR—No half holiday.

WINCHESTER—No half holiday.

WALKERVILLE—Thursday afternoon, June, July, August.

WALLACEBURG—No half holiday.

WATFORD—Wednesday afternoon, June, July, August.

WEBBWOOD—No half holiday.

Practical Course for Sheet Metal Workers

Article No. 34 of Series

By CHARLES SEIVERS

IN this issue is shown a very simple method of cutting mitres or patterns for a finial or post, one square in plan, the other octagon in plan.

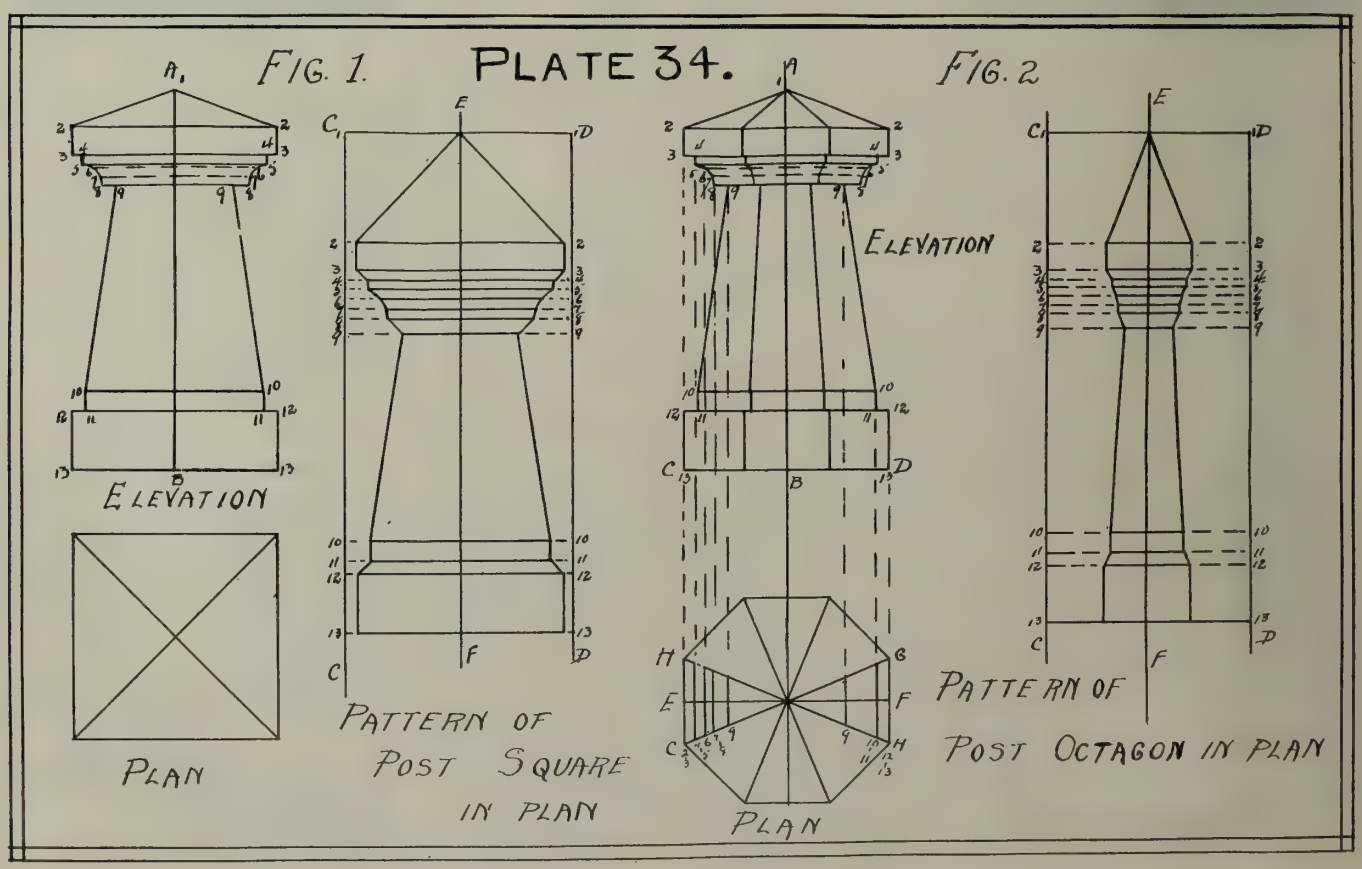
In Fig. 1 is shown an elevation and plan of the post, square in plan.

As already described in a previous number a square mitre can be cut from the profile or section of moulding, in this case after dividing the curved mouldings into equal number of parts, draw a line through centre of elevation as shown by A-B.

Draw two parallel lines as C-C and D-D, and at right angles draw C-D, from this point lay off the spaces between points on profile as 1-2-3-4, etc., between stretchout lines, and parallel to them, draw a line as E-E, this line to correspond to A-B, and to be used to set off measurements from.

Measure from line A-B on elevation to outer edge where each division ends, and set off from line E-E on pattern, putting measurements on line 1 of elevation on line 1 of pattern, line 2, on line 2 and proceeding carefully with remaining lines in similar manner.

When all are set off a line drawn through points obtained will give outline of pattern desired. In Fig. 2 is shown the elevation of a post octagon in plan on a line parallel to its base as C-D.



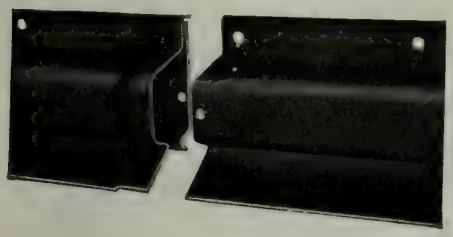
The accompanying article is No. 34 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

Draw a plan view of post as shown by octagon drawn on line E-F. Divide the profile of elevation as described in Fig. 1, and from each point draw a line parallel to centre line A-B, until it intersects the mitre lines on the plan.

In order to keep the lines from being bunched up too close, the upper part of post from points 1 to 9 are drawn on one-half of plan and from 9 to 13 on opposite half of plan as shown by G-G and H-H.

Draw two parallel lines and connect at right angles as C-C and D-D and C-D, from C-D on each line lay off the divisions on profile. Parallel to C-C draw a line as E-F. Measuring from line E-F on plan to the mitre lines G and H, set off the distance on line 1 on line 1 on stretchout. On line 2 of plan on line 2 of stretchout and repeating in similar manner on remaining lines. When two points as 2 and 3, 4 and 5, etc., come on same line, the same measurement does for both.

When all are set off a line drawn through the points obtained will give outline of pattern desired. Should the post be any regular polygon in plan the method of developing the pattern would remain the same.



New Hardware Goods

Offered Canadian Hardwaremen

SLIP JOINT TRACK.

Wagner Manufacturing Co., Cedar Falls, Iowa, recently made a change in their Ever Tight Track, whereby the two

Tracks ready for installation.

Ever Tight and Rain Shed Tubular Barn Door Tracks.

sections of track are joined together in a slip joint. The accompanying illustration show the new slip joint, which is said to insure a perfectly smooth running joint. The company states that this track does away entirely with any brackets, joint splices, etc., and at the same time makes a joint that is easily put together.

NEW TELESCOPE CASE.

A new design in metal vest pocket flashlights is the "Kwik-lite" Telescope Case. (Illustrated herewith.) The new design, consists of two parts drawn into

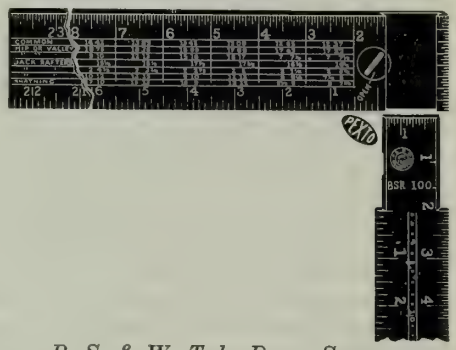
New Telescope Case.

shape from a solid sheet of metal, the upper part telescoping into the lower, and when pushed together, they firmly lock. With a slight pressure on the side of the case, the two pieces can be pulled apart, making it an easy matter to insert the battery.

There is not a hinge on the entire case, and no clasps, the makers claim, which catch and tear the pocket. They are supplied in a variety of finishes, including nickel, gun metal, statuary bronze, silver and gold.

This is one of the many new designs shown in the thirty-two page "Kwik-lite" catalogue just issued by the Usona Manufacturing Company, Inc., No. 1 Hudson street. New York City, and No. 309 S. St. Clair street, Toledo, Ohio.

STROP-BACK HONE.



American Hone Company, Olean, N. Y., offers to the Canadian trade the

Strop Back Hone.

"Cushion Strop-Back Hone," here illustrated. The makers claim that some of the greatest improvements in devices for razor sharpening are found in this hone. The makers claim that with this hone, although the stroke is shorter than with the swing strop, yet fewer strokes are needed to get the most pleasing edges. The makers also claim that with the swing strop much depends upon the hand holding the strop—whether the leather is pulled tight or left loose. It is possible to strop correctly on a loosely held strop, but it is very difficult. With this cushioned strop the surface is constantly flat, 99 per cent. of stropping uncertainty is removed.

The makers also state that it is a

P. S. & W. Take-Down Square.

demonstrable fact that the Cushioned Strope as perfected on this strop-back hone represents the highest efficiency attainable. Every one is genuine shell horsehide and finely finished. The results are the same in the hands of an expert as in the hands of a novice.

TAKE-DOWN SQUARE.

The Peck, Stow & Wilcox Company, Southington, Conn., are offering to the Canadian trade a new take-down square. The manufacturers state that when the tongue slides into the grooved portion of the square it is thrown forcibly against the shoulder by a button which works on a cam. This not only means that the square is always perfectly rigid and true, but that the graduation is also absolutely accurate when the parts are locked together for use. It is also impossible to separate or unlock the square unintentionally while using it. Accuracy is further secured by the unusually careful machining of the joints to a perfect fit.

It is also a very convenient tool as well as being strong and reliable, inasmuch as it needs no specially made key for unlocking it. The button is constructed with a slot so that the owner can use a coin or any other piece of metal that will fit into it. All the edges of the square are perfectly straight and there are no protruding parts so that when assembled it is as rigid and accurate as a solid square.

This square is made in all the usual numbers and finishes including those which show rafter framing table.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—The Steel Corporation—The Real Issue.

The Steel Corporation.

From the New York Journal of Commerce.

THE unanimous decision of the Circuit Court of Appeals at Philadelphia in favor of the United States Steel Corporation in the anti-trust suit virtually sustains the contentions of that organization that it is not monopoly and does not effect an unlawful restraint of trade in the products of the iron and steel industry. It follows substantially the lines of the Supreme Court decisions in the Standard Oil and Tobacco cases in interpreting the law, but holds that its application does not bring this corporation within its prohibition and require its dissolution.

In effect, it upholds the contention upon which counsel for the Corporation have insisted, that in the regulation of competition within reasonable limits it has not had an injurious effect upon the competing companies, which have gained in their proportion of the business, upon the industry and trade as a whole, or upon any interest of the public. This suit was started in the midst of what was not so much a genuine anti-trust agitation as an attack upon large and powerful corporations which were a legitimate result of industrial development in this country. It was never fairly justified and there seems to be no sufficient justification for carrying it any farther.

A Soft Answer.

From the Credit Men's Bulletin.

THERE is nothing to be gained by allowing yourself to become aroused by anything that a man with a kick may write you. There are a thousand things which might have put him in a bad humor, all of which you know nothing at all about.

It is a good plan in adjusting any kind of a complaint, if it is impossible to give a man an immediate answer, to write him that his complaint is being investigated and he will then understand that the matter has not been neglected.

Possibly the best way to get the right attitude in answering a customer's complaint, or his attitude towards an unpaid account is to consider how you would handle this customer if he came into your office. Certainly you would not pick a quarrel with him, you would not let yourself be other than courteous and polite throughout his call, you would take him all through the house if necessary just to demonstrate how desirous the firm was to give him a square deal.

It must be borne in mind, also, that a great many merchants, especially those who are doing a very small business, do not as a rule have the proper knowledge or acquaintance with business customs and are therefore likely to say and do things that you as experienced business men would not countenance in your own establishment. To bear this in mind will frequently help in adjusting the customer's complaint with the greatest degree of satisfaction to all concerned."

The Real Issue.

From the Boston Post.

BEFORE there ever existed any law, international or otherwise, the lowest brutes of the field shed their blood to defend their young. The Barbarians of the forests fought to the bitter end to shield their women and their children. Up through the weary, blood-stained centuries to the ancient civilizations, through the mediaeval ages to our modern civilization, the idea has grown apace that it is the duty of the nation to protect its citizens wherever they might be on legitimate errands.

Finally, there grew up a universally recognized code of international law, emphasizing and guarding the personal rights of individual travelers, and especially neutral travelers on the high seas and elsewhere—rights that all nations even when at war must respect.

Now along comes Germany in the twentieth century, and sets up the infamous, incredible claim that she is justified in deliberately slaughtering innocent neutrals, because, forsooth, to spare them would interfere with her plans of submarine warfare. And so, knowingly and without even a warning, she torpedoes and sinks a great passenger ship, and sends to sudden death over 1,000 non-belligerents, including over 100 American citizens—men, women, children and babes at breast.

For this horrible, unbelievable crime against international law, against civilization, against humanity, she was called to account by President Wilson in a note, remarkable for its self-restraint and for the opportunity it gave her to make any possible amends, to disavow responsibility and to take immediate measures to prevent the repetition of such a terrible catastrophe.

The war-crazed chancellery at Berlin replies with an attempt to excuse the inexcusable. The claim is made that the Lusitania was an armed auxiliary cruiser. It is not true. Collector Malone, of New York, whose special business is to know the facts, certifies that the Lusitania carried no armament. Germany insults the good faith of our government when she makes such a false assertion. Nor was the steamer an auxiliary of the British navy. She was liable to be requisitioned, as are all merchant ships of all nations at war. But she had not been called. She was beyond cavil an unarmed merchant vessel.

The German note claims that she carried Canadian troops. Not a scintilla of evidence has been produced to show this. The United States government has used extreme care that no troops should pass through our borders or be shipped at our ports. The note further undertakes to tell the United States that our laws against the presence of explosives on passenger ship were violated. This is also untrue, because it was long ago decided that cartridges for small arms do not fall within the law. And even if these allegations as to the cargo were true, it was Germany's plain duty under long accepted international law to safely remove passengers and crew before sinking the ship.

Only in barbarism and piracy can any adequate excuse be found for the murders of the innocent passengers on the Lusitania.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

The market reports this week indicate that the hardware trade is passing through a period of sudden price advances, caused largely by changing situations in the metal markets. Recent developments in lead have caused stiff advances in the price of many lines. White lead in oil has advanced $1.50 per 100 pounds. Dry white lead, red lead, lead pipe, solder, lead fittings, sheet lead, shot and other lines have advanced in price. The continued high price of spelter has caused further advances in galvanized sheets, galvanized pipe, wire, staples, poultry netting, etc. Regarding galvanized sheets it is claimed that even at advanced prices the makers are losing money when present costs of production are considered. Prices on brass and copper wire, brass shoe rivets, etc., have advanced considerably. The oil market is weaker and prices have declined at Toronto. Paris green has advanced. Owing to the many sudden changes which are taking place, there is a great variation in the prices being quoted on certain lines. Some wholesale firms still have on hand stocks of certain goods bought some time ago at low figures. Other firms having disposed of stocks bought at low prices, now have to enter the market and pay exceedingly high prices. It is obvious that the latter are at a disadvantage when meeting low prices quoted by the former. Quotations on many lines are for immediate acceptance and delivery and subject to stocks on hand. In some cases prices have been temporarily withdrawn. The markets this week, as in recent weeks, contain valuable information for the hardwareman. June business with hardware jobbers is showing a good improvement over May.

MONTREAL.

MONTREAL, June 10. — The metals have increased their dominance of the hardware market situation this week. Spelter is the chief sensation, but lead is still very much in the limelight, and in sympathy with tin has firmed up, and copper and antimony and very strong. Products are being affected in every direction and the advances on everything into which spelter enters in any degree are such as provide matter for serious consideration. This seriousness has been brought home by the report that the British Government proposes to commandeer all supplies of spelter for the use of the war department. The report is considered as semi-official and likely to be carried out. Lead has been principally interesting to the paint men, but lead products are also affected and it is considered that the same action as proposed in relation to spelter may be taken by the British Government in regard to lead, in order to maintain the output of ammunition.

Price advances cover sheet lead, lead pipe, lead fittings, galvanized sheets, solder, sheet zinc, Canada plates, Terne plates, tinned iron, black sheets, galvanized pipe, fence wire, brass and copper wire, staples, poultry netting, galvanized wire rope, etc.

The movement of goods shows some slight improvement as regards the country, Some country districts are a little better than at this time a year ago, but the city continues dull, particularly as regards the heavier materials. The activity is great in relation to the volume of business on account of the great number of small orders, but the profits are generally satisfactory on this trade. The warm weather livened up the demand for seasonable lines, particularly lawn equipment.

The Metals.—Spelter provides the sensation in the metals this week, but lead is not much over-shadowed, and there are advances all along the line—tin, copper, antimony, etc., all being affected to a more or less extent. The semi-official action of the British Government, as seen in the announcement that spelter is likely to be commandeered for military purposes, practically means a cancellation of all contracts between British and Canadian firms, and the confining of manufacturing operations to sheets alone. Advances are general in all lines where spelter is a factor. Lead is now about 50 per cent. ahead of the level of two weeks ago, and all products record materially advanced prices. Higher prices for copper are resulting in advanced quotations generally for brass and copper manufactures. Altogether it is difficult to see where the metal markets will end if the war continues.

Tin.—The decline in tin on the local market, although it did not go so low as New York proportionately, has been checked up, an upturn in the latter and London markets, and quotations have been advanced 1c, to 47c-48c. This firmness was predicted as the result of the rapid rise in lead values. Latest advices are that, while London is still advancing, New York reports a smaller inquiry from consumers and sellers very shy. The state of the trade continues strained and excited, and the advance of an additional $5 per ton in lead adds to this condition. New York's gain for the week is 2¼c to 40¼c.

Spelter.—The report that the British Government is likely to seize all spelter stocks for the use of the war department has been the sensation of the week in this market. This is regarded as semi-

MONTREAL QUOTATIONS.

Tin	47c-48c
Spelter	29c-30c
Copper	21c
Lead	7¾c-8c
Antimony	40c
Solder, ½ x ½	27c-29c
Solder "strictly"	30c-32c
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp	13c
Sisal	11c
Lath Yarn	9¾c

For quotations on other hardware goods see weekly report and current quotations.

official news and contracts between British and Canadian firms are in a state of suspension if not complete cancellation. This applies more particularly to miscellaneous products than to sheets. The advance in the local market is 3c a pound, to 29c-30c, the increase in New York being about the same amount to 26c and 27c. Products into which the metal enters in course of manufacture are more affected this week than since the war began, the sustained high values beginning to be directly felt as old stocks are exhausted. Strange to say, late advices from New York are that the demand in the galvanizing trades has dropped to the ground with the inquiry from war contractors also easier. It may be that the consumers are just beginning to realize that, with their immediate needs satisfied, they are facing a market which has practically doubled since May and nearly trebled since the 1st of April. At the present level it would not require very heavy offerings to start a movement towards lower prices, in the New York opinion. Paper profits are estimated to run into the millions, but they may vanish as they have often done before. Generally speaking, the factor seems to be overlooked that the ordinary consumption at the present prices is likely to show a very material reduction, and it remains to be seen whether this has been figured on in the relation of supply and demand.

Lead.—Another advance of $5 the ton by the American trust brings the New York quotation to $5.75 and Montreal to $7.75 and $8. Sheets, pipes and other products have followed in the procession. The top of the movement does not seem to have been reached and in New York there is talk of 10c lead. At the moment, outside handlers are getting considerably above the Trust quotation, and immediate advances are, therefore, to be expected. In relation to the higher prices, however, it is pointed out that the American production is practically unlimited and it is a question if the market at its present level is not the result of speculation and, therefore, unhealthy.

Copper.—Copper continues at 21c on the local market and is very firm, while all copper and brass products are rising in price as the sustained high cost of raw materials affects the situation more and more. An advance is logical with New York at 19½c—nearly 1c above a week ago—and predicting a further increase of ½c. New York reports a very strong demand by domestic consumers.

Antimony. — This market continues without much change. British supplies are being exhausted and are practically unobtainable at second hand. A further advance of about 1c is recorded in the United States for Chinese and Japanese, while Montreal remains nominally about 40c.

Solder.—Lead has now become a strong influence in the solder situation and prices are advancing. Local quotations up to the present are advanced 2c from the bottom with the top prices still holding. Half-and-half is quoted 27c to 29c and "strictly" 30c to 32c.

Sheet Zinc.—Perhaps no one item in the metal list shows a greater change than sheet zinc. Before the war broke out the price was between 7c and 8c, whereas 36c is now being quoted and there is very little available even at this high figure. This is an advance of 10c for the week.

Sheet Lead.—The advance of 75c all round on lead sheets made last week is followed by another increase of 50c and there is prospect of a continued rise in values. The following quotations are now in effect:

Sheets, 2½-lb. sq. ft	$8.75
Sheets, 3-lb. sq. ft.	8.50
Sheets, 3½-lb. sq. ft.	8.25
Sheets, 4-6 lbs. sq. ft.	8.00

Lead Pipe.—The advancing lead market also has its effect on lead pipe. The advance of 1c last week is followed by another of ¾c this week. Lead pipe is now quoted at 9¾c and lead waste pipe at 10¾.

Lead Fittings.—Fittings are also in the price parade, and an increase of 10 per cent. is noted; traps and bends are now 30 per cent. off as compared with 40 per cent. Lead wool is another item on the list, showing an advance of 1c, from 8c to 9c a pound.

Galvanized Sheets. — Continued advances in spelter have further affected the quotations for galvanized sheets, which are up another 25c all round, while further increases are not unexpected. The following quotations are now in effect:

Queen's Head and Gorbals Best Best—	
16-20 gauge	$4.80
22-24	5.00
26	5.25
28	5.50
Fleur-de-Lis and Colborne Crown—	
16-20 gauge	$4.55
22-24	4.80
26	5.05
28	5.30
Apollo—	
14 gauge	$4.30
16	4.30
18-20	4.50
22-24	4.60
26	4.70
28	5.20
10¾ ozs.	5.40

Galvanized Plates.—Galvanized Canada plates are affected similarly to sheets, the advance being 25c. with the following quotations now in effect:

	Apollo	Crown	Gorbals
18x24x52	$ 6 00	$ 6 00	$ 6 00
60	6 25	6 25	6 25
20x28x47	6 25	6 25	6 25

Terne Plates.—Charcoal terne plates have advanced 25c. Quotations are now as follows:

Dean or I. G. Grade—	
I.C. 20 x 28, 112 sheets, 216 lb.	$9 25
200 lbs.	9 00

Tinned Iron.—An advance of 25c is recorded for tinned iron. The quotations now in effect are:

72x30 up to 24 gauge, case lots		$ 9 75
Less case advance 25c.		
72x30 up to 26 gauge, case lots		10 25
20x28x94	12 50	12 50

Black Sheets. — There are general changes in the list for black sheets, advances being from 10c to 30c. The new list is as follows:

10 to 12 gauge	$3 00
14 to 24 gauge	2 85
26 gauge	2 95
28 gauge	3 00

Galvanized Pipe.—The quotations for galvanized pipe continue to advance almost weekly in sympathy with the spelter market. The double lists in effect for some weeks have disappeared for the time being in favor of the following:

Buttweld.	Per 100 feet.
¼" and ⅜"	$ 3 66
½"	4 42
¾"	5 40
1"	7 99
1¼"	10 81
1½"	12 92
2"	17 39
2½"	27 49
3"	35 95
3½"	43 24
4"	51 23
Lapweld.	
2"	18 87
2½"	28 08
3"	36 72
3½"	44 16
4"	52 32
4½"	62 23
5"	72 52
6"	94 08
7"	123 76
8" x 25 lbs. per foot	130 00
8" x 28 lbs. per foot	149 76
9"	179 40
10" x 32 lbs. per foot	166 40
10" x 40 lbs. per foot	214 24

Fence Wire.—The price of spelter has also affected fence wire to a material degree. New prices which have been adopted are as follows:

Barb	$3 05
No. 9, coil spring	3 00
No. 9, plain galvanized	2 95
No. 12, plain galvanized	3 10
No. 13, plain galvanized	3 20

Brass and Copper Wire.—The prices of brass and copper wire have been steadily advancing with the market for raw materials. Copper wire is now quoted 40 per cent. off. Brass wire, 3 to 24 gauge, is quoted at net list and 25 to 36 gauge 5 per cent. off. Some firms, however, still quote 5 per cent. off and 10 per cent. off, respectively. Snare wire is quoted as follows: No. 20, 52½c; No. 22, 53½c; No. 24, 57½c; and No. 26, 67c. Brass jack chains are now 35 per cent. off.

Staples.—Further evidence of the effect of costly spelter is to be found in advances of $1 on staples. Galvanized staples are now $4 in kegs and $4.25 in 25-lb. boxes.

Galvanized wire roofing nails have also been advanced, the quotations being $6.50 as compared with a former figure of $5.75.

Poultry Netting.—Poultry netting, in which there is a very fair movement, advances on account of the spelter influence. The discount has been brought down from 45 per cent. off to 40 per cent. off.

Galvanized Ware.—The advances in galvanized ware made a week ago were quickly absorbed, and such have been the increases recorded in spelter that there are radical price changes predicted to take effect before the end of the week. It is stated that the development of England taking charge of spelter stocks for war purposes—if such a step is taken—would be to cut off supplies for anything but sheets. The expectation that the next change in the price list will be to drop all discounts in favor of net list prices.

Copper Rivets.—Advances in the prices of copper rivets are still predicted, and it is thought that the change cannot long be wederred, as higher quotations are warranted by the position of copper.

Screws and Bolts.—Brass screws have not yet been advanced, but the predicted higher prices are fully warranted by the rise in brass wire. Other screws and bolts are in fair demand in the outside districts, but the city trade is quiet.

Builders' Hardware and Materials.—New lists on builders' hardware are still being awaited, evidently being further deferred by the unsettled state of the metal markets. However, a working basis has been in effect for some time with an all-round advance averaging about 10 per cent. Demand for hardware and materials is slow, and prospects are anything but bright for the building season.

Iron, Steel, Nails, Etc.—Consumption of bar iron and steel is very light, the former is quoted at $2 with 5c off on car orders. The movement of nails and fencing continues very fair, considering the season.

Cutlery.—The June demand for cutlery has been very fair and continues so. Also there has been considerable inquiry for plated ware. June weddings are evidently helping in this department.

Oakum.—The market for oakum is rather unsettled. While some firms are quoting the same prices as before the war, others have made advances and one house reports increases of 75c on plumbers' spun.

Galvanized Wire Rope.—Wire rope has been making some important advances, the galvanized being particularly affected. Galvanized, 1st grade, 6 strands, 24 wires, ⅜ in., from $5 to $7.25; 1-in., $16.80 to $21. Black, 1st grade, 6 strands, 19 wires, ⅜-in., $5 to $6, and 1-in., $15.10 to $18.50.

Seasonable Lines.—The recent warm spell had the effect of starting a brisk movement of summer lines to outside points. This was particularly noticeable with regard to lawn tools; garden equipment and harvest lines are also going well.

Stoves.—There is little change in the stove business, although the hot spell was good for gas and oil stoves. In the heavier goods things are very dull.

TORONTO.

TORONTO, Ont., June 10.—There have been many developments in hardware circles this week, and many price changes have taken place. There has also been some improvement in business, and a brighter feeling prevails in the hardware trade. The more seasonable weather has created a better demand for summer lines, although there is room for improvement yet. Conditions in the country districts are satisfactory, and the crop prospects continue favorable, which is having a beneficial effect on business. The city trade is showing some improvement in the demand for seasonable lines, but the building trade is quiet and builders' hardware is moving slowly. Trade is being stimulated by the orders for war materials. Harness makers are reported to be very busy on government work. There is a tendency for consumers to buy in small lots and to keep stocks as low as is convenient.

The spelter situation is seriously affecting the galvanizing trade. The metal is practically unobtainable except at extravagant figures, with the result that prices of galvanized sheets have again been advanced. Higher prices on galvanized pipe, galvanized wire and brass wire have also to be noted. Conditions are such that it is impossible to say what will happen to the market, but there are no signs of any relief. Lead pipe, sheet lead and fittings have advanced in consequence of the increase in the cost of pig lead. The rope market is very firm, and an advance in Manila is anticipated. Prices on sheet zinc are higher, but have been withdrawn on account of conditions in the market.

Metals.—A strong tone characterizes the metal markets, and higher prices are the general rule. The demand for those metals used in the manufacture of munitions is gradually increasing, and there is some improvement in the ordinary business. Spelter is again in the up-grade, and the market is erratic. The situation is becoming increasingly serious, as the metal is very scarce. Lead has advanced sharply, and the market is active. Tin, copper and aluminum have all advanced, and solders are firm in consequence of the strength in the tin market.

Tin.—The market is higher after considerable activity, and business in futures is heavier. The present price is considered moderate, but there is a temporary absence of speculation, and the market will probably not advance much higher in the meantime. Tin has advanced 3c locally, and is quoted at 45c per pound.

Copper.—The market is strong and higher. There is a distinctly better tone in the market, and copper is in a strong position. The heavy consumption of copper for munitions continues, and no reduction in this direction is looked for, the tendency being in the direction of an increase. Copper has advanced ½c, and is being quoted locally at 21½c to 22c per pound.

Spelter.—The situation is unchanged, and conditions in the market do not improve. The British Government contemplate, it is claimed, commandeering all stocks of spelter in Great Britain and prohibiting the use of spelter for galvanizing except for Government work, including what may be required for munitions. Quotations have advanced 2c, but are purely nominal at 32c per pound.

Lead Advanced.—The market is strong, and the Trust has advanced prices another $5 per ton at New York. The market appears to be in the hands of the speculators, and a higher level may be reached, notwithstanding the fact that production can easily meet the consumption. Lead has advanced 1¾c, and is quoted at 8c per pound locally.

Antimony.—The market is firm and more active on account of good buying. There is a growing demand for antimony for munitions, and all available supplies are being reserved for this purpose. There is a shortage of metal in the local market, and indications point to higher figures. Quotations are nominal at 40c per pound.

Aluminum Advances.—The market is strong, and quotations have advanced 4c, being nominal at 30c per pound.

Solder.—Business is quiet, but prices are firm, due to strength in the tin and lead markets, with higher prices looked for. Prices are given in panel and in the current market quotations.

TORONTO QUOTATIONS.

Tin	45c
Copper	21½c-22c
Spelter	32c
Lead	8c
Antimony	40c
Aluminum Ingot	30c
Aluminum Pattern	29c lb.
Solder, ½ x ½	27c lb.
Wire Solder	33c lb.
Wiping Solder	23c lb.
Tinker's Bar Solder	29c lb.
Wire Nails	$2.35 base
Cut Nails	$2.70 base
Pure Manila Rope	15½c base
British Manila Rope	13c base
African Hemp Rope	13c base
Sisal Rope	10½c base

For quotations on other hardware lines see weekly report and current quotations.

Sheet Zinc.—Prices continue on the up-grade and shortage of zinc is seriously affecting the sheet zinc trade. Quotations on sheet zinc are nominal at 31c on 5-cwt. casks.

Galvanized Pipe.—Higher prices equal to an advance of 12 per cent. are announced for galvanized pipe. The advance was predicted in these columns last week, and is entirely on account of the shortage, and consequently high price of spelter. Black pipe is unchanged. The following are the new prices for galvanized pipe:

Buttweld.	
¼" and ⅜"	$ 3 66
½"	4 42
¾"	5 41
1"	7 99
1¼"	10 81
1½"	12 93
2"	17 39
2½"	27 50
3"	35 96
3½"	43 24
4"	51 23
Lapweld.	
2"	18 87
2½"	28 08
3"	36 72
3½"	44 16
4"	52 32
4½"	62 23
5"	72 52
6"	94 08
7"	123 76
8"x25 lbs. per foot	130 00
8"x28 lbs. per foot	149 76
9"	179 40
10"x32 lbs. per foot	166 40
10"x40 lbs. per foot	214 24

Lead Pipe Advances.—Another advance in lead pipe is announced as a result of conditions in the lead market. The new prices are as follows: Lead pipe, 9.75c; waste pipe, 10.75c net; traps and bends 30 per cent. off list. The market is very firm, and higher prices are probable if the lead market continues to advance.

Galvanized Wire Advance.—Prices on galvanized fence wire have advanced 30c per cwt. Prices, however, have been withdrawn by some firms on account of the spelter situation. The new quotations are as follows: Barb wire, $3.02; No. 9 coil spring, $2.90; No. 9 plain galvanized, $2.80; No. 12 plain, $2.95, and No. 13 plain, $2.90 per cwt. Some firms are still quoting at last week's prices—30c per 100 lbs. less than the foregoing.

Brass Wire.—The high cost of spelter has made an advance in brass wire necessary. In 3 to 24-gauge net list and 25 to 36-gauge the discount is 5 per cent.

Galvanized Sheets Advance.—The possibility of a further advance in prices of galvanized sheets was predicted in these columns last week. The new prices are now in effect and represent an advance of 25c per cwt. The spelter situation is entirely responsible for this, and the outlook is serious for the trade, as prices will probably go much higher. Many of the leading sheet mills are declining business.

Canada Plates.—New prices are announced for Canada plates. Ordinary 52 sheets are quoted at $3.50, and all-bright, $4.60.

Bar Iron and Steel.—There is no change in the situation, and business is dull except for war materials. Prices of bars are firm, but unchanged, at $2 base.

Galvanized Ware.—Prices are firm at the advance reported last week. Unless the spelter situation improves higher prices for ware may be expected.

Rope.—The market is very firm, and an advance in the price of Manila rope is anticipated. There is no change in the situation as regards raw materials, all markets being affected either directly or indirectly by the war. Prices are firm, and are given in the current market quotations.

Wire Nails.—Quotations are firm at $2.35 base, and fair business is reported. Cut nails are quoted at $2.75 base.

Babbitt Metal.—Some brands of babbitt metal have advanced 5c per pound in consequence of the higher price of pig metals.

Fittings Advanced.—Malleable iron fittings have advanced, the new discount being 37½ per cent., as against 40 per cent. Prices of cast iron fittings are unchanged.

Shoe Rivets.—A new price has been issued on brass shoe rivets. Discount 7½ per cent. and add 10c per pound net.

Shot Advances.—Following the higher price of lead, shot has been advanced to $10 basis.

LONDON.

LONDON, Ont., June 10.—Many price changes have taken place this week. White lead has advanced $1.50 per 100 lbs. Galvanized pipe has advanced, also galvanized wires. The recent warm weather has had a beneficial effect on business, and retailers report a very fair movement in seasonable goods.

Wire Advances.

Galvanized wire has advanced 10c per 100 lbs., and the prices now in effect are: Barb, $2.75 per 100 lbs.; No. 9 plain galvanized, $2.50 per 100 lbs.; No. 12 galvanized, $2.65 per 100 lbs.; No. 13 galvanized, $2.75 per 100 lbs.; No. 9 coil spring, $2.55 per 100 lbs.; No. 12 coil spring, $2.75 per 100 lbs.

Galvanized Pipe Advances.

Galvanized iron pipe has advanced 5 points. The new prices are shown in current market quotations.

White Lead Advances.

An advance of .75 cents per 100 lbs. has taken place in quotations on white lead. Pure lead is now quoted at $9.85 in ton lots, and $10.15 in less than ton lots.

Oil, Turpentine, Etc.—No change has taken place in turpentine or oil since last week. Turpentine is quoted as follows: Single barrels, 68c per Imperial gallon; 2 to 4-barrel lots, 67c per Imperial gallon; 5-gallon lots, 75c per Imperial gallon.

Linseed oil is quoted as follows:

Raw Linseed—

1 to 2 barrels	82c per gal.
3 to 5 barrels	81c per gal.
6 to 9 barrels	79c per gal.

Boiled—

1 to 2 barrels	85c per gal.
3 to 5 barrels	84c per gal.
6 to 9 barrels	83c per gal.

Galvanized Goods.—The continued high price of spelter has caused price advances on many lines of galvanized wares.

Late Price Changes.

Just as we are going to press, a report from our London representative states that linseed oil has been reduced 2 cents per gallon; turpentine has been reduced three cents per gallon; paris green has advanced two cents per pound.

WINNIPEG.

WINNIPEG, June 7, 1915.—Heavy rains during the past three days more or less general over the whole of the Canadian West have created a greatly improved feeling in the business world.

Noticeable in the past week is the activity in the smaller towns from which there is a comparatively much better enquiry than from the larger centres.

Builders' hardware is quiet. Building permits are insignificant as compared

with former years and there is no prospect of improvement.

In paints and oils both city and country trade is satisfactory. The country trade has shown a very marked improvement during the past 30 days. All zinc products are very firm, and this leads to a probability of higher prices in many lines of paints. Linseed oil, though steady, is of course dependent in the long run on flax. The flax market here is erratic, but the trade generally looks for higher prices. This would, however, depend on industrial conditions. Should there be an era of real industrial activity, prices of both raw and boiled oil would go far.

As yet there is no ease up in glass prices, but it is significant that Winnipeg jobbers have instructed their men on the road that they may book glass at current prices for shipment until October 1. The terms are 2 per cent. off for 30 days or 60 days net, according to date of shipment.

Notwithstanding the recent advances in barbed wire of 30 cents per spool on Lyman wire, 33 cents on Glidden and Baker wire, and of 35 cents on Alberta Special, the demand continues active. Jobbers' stocks are low and shipments go into consumption as fast as they arrive.

Paris green is in demand, and the demand for sprayers and mixtures has been so active that the supply is practically sold out.

Reform in the Cutlery Industry

Series of Conferences Between Employers, Labor Leaders and Workmen in Sheffield—Said to be Minimum of Goods at Maximum of Cost. Advocating Specialization.

THERE has been a good deal of discussion in Sheffield, Eng., of late on the subject of reorganization of the cutlery industry upon a modern basis and the Ironmonger in a recent editorial states that this has culminated in the calling of a series of conferences between employers, labor leaders, and workmen, the first of which has been already held. The task, however, is heavy, and few cutlery manufacturers believe that the effort will be successful. The public is under the impression that the stubborn opposition to reform is wholly due to the conservatism of the workmen and that this will continue to be a stumbling-block, but those who really know the industry are aware that the masters are quite as much to blame for its backwardness in certain directions, and that they are, as a class, deficient in those qualities which are essential to the carrying out of drastic reforms in workshop organization and salesmanship.

One of the most noticeable and unfortunate features in the manufacture of cutlery in Sheffield is the enormous waste of time that goes on, the result being a minimum output of goods at a maximum of cost. No successful competition in the world's markets is possible unless this waste is stopped. The Sheffield system has few redeeming features. It is true that it yields a certain proportion of goods of the highest excellence, but it is full of anachronisms and calls for a root-and-branch reform. One of the best of the numerous suggestions for improvement at present under consideration is that of specialization in production. Every maker in Sheffield strives to produce the largest possible variety of articles and patterns. A manufacturer introduces, let us say, a pen-knife of novel design which becomes popular and sells freely. As soon as other makers learn of its success, they proceed to manufacture a similar knife. The total possible sales of this particular class of knife might keep two makers continuously employed, and if the production were limited to them they would be able to turn out the article at the minimum expense. But when the sale is divided amongst thirty or forty houses the individual output is negligible, the cost of production grows excessive, and the knife can be easily undersold by foreign makers who work without such a handicap. The advocates of specialization would allow the inventor of a novelty to retain its sole manufacture and to supply others who wished to factor it at a price that would leave them a fair margin of profit. The economy of such a plan would cheapen the article to the public, while yielding a satisfactory profit to the maker and to the distributors, but a good deal of organization would be needed to ensure its success, and the manufacturers would need to cultivate the co-operative spirit to a high degree and to learn to place confidence in those with whom they have been in competition for years.

The plan of works specializing in a limited number of sizes or patterns is common in Germany and in other countries where trade is regulated by large organizations of manufacturers.

SOME SALESMEN.

Some salesmen have but one object constantly before them. To make sales, preferably big sales. They will get through with one customer as far as possible in order to get the next one, perhaps paying scant attention to customers who are looking for low-priced articles when "bigger game" is in view. Salesman of this stamp neglect the little courtesies which make permanent customers. They will sell goods to people which they can be sure will not prove satisfactory to the purchasers. Thus they make one sale in the present and perhaps throw away many dozen purchases for the future. This, however, does not worry the get-'em-at-any-cost salesman. He looks only at the present, quite forgetful of the future.

ALLIES PURCHASING AGENTS.

The Trade and Commerce Department, Ottawa, has published the following list of purchasing agents for military purposes for the Allied Governments:—

International Purchasing Commission, India House, Kingsway, London, Eng.

British.—Col. A. G. Barton and F. W. Stobart, Ritz Carlton Hotel, Montreal.

French.—Hudson Bay Co., 56 McGill Street, Montreal; Captain Lafoulloux, Hotel Brevort, New York; Direction de l'Intendance Ministere de la Guerre, Bordeaux, France; M. De la Chaume, 28 Broadway, Westminister, London.

Russian.—Messrs. S. Ruperti and Aieksieff, care Military Attache, Russian Embassy, Washington, D.C.

MAKING USE OF ODD CORNERS.

(Continued from page 30.)

display—they had to look because there was a distinct break in the store fixtures, and a special display stood before them.

The background was made from wall board, and covered with light grey wall paint. The stencilling was done with "rich green." Ferns and flowers added greatly to the display. The expense connected with arranging these interior displays is very small and they can be made by any clerk who cares to give a little time and thought to the work.

Take a look around your store and see if there is not room for improvement in your display methods. Find out if you are using all space to best advantage, and last but not least—if there are any junk corners have them cleaned out and start them making money for you.

New Standards for Rosin

Directors of Savannah Board of Trade Adopt the New Standard for the Various Grades of Rosin—Effective June 14. New Era in Industry.

At a recent meeting of the Board of Directors of the Savannah Board of Trade, Savannah, Ga., a new standard was adopted for the various grades of rosin. The rule becomes effective on Monday next, June 14. A number of retail hardware merchants will be interested in the "New standard," which has been adopted, but those chiefly interested are hardware and paint jobbers and varnish manufacturers. Following is the resolution adopted:—

"Resolved: By the directors of the Savannah Board of Trade, in regular monthly meeting assembled,

"That in addition to the general rules and special rules governing the naval stores trade now in effect, the following rule be and the same is hereby adopted:

"That this association formally adopts the new standard for the various grades of rosin, prepared, suggested and submitted by the Bureau of Chemistry, Department of Agriculture of the United States of America, the technical description of said standards in component colors according to the Lovibond scale being as follows:

	Yellow.	Red.
W W	20	2.1
W G	20	2.5
N	25	3.3
M	30	4.5
K	35	5.8
I	40	7.6
H	45	9.4
G	50	15.5
F	75	34.5
E	100	52.5

"Based upon a seven-eighths of an inch cube.

"Grades D and B to remain as at present.

"That authority to issue or cause to be issued the new standard rosin type samples is hereby delegated to the committee on inspection of naval stores of this association.

In using these type samples all grading to be as follows:

"That this rule become effective on June 14th, 1915."

A letter sent out by the Board reads as follows:

"The new standards and methods for grading rosin are therefore effective June 14, and will be used at the principal primary ports in the south.

"The adoption of the standards and methods proposed by the Bureau of Chemistry, Department of Agriculture of the United States of America, by this association and other commercial bodies is the beginning of a new era in the naval stores industry.

"Producers of naval stores should insist that their rosin be graded according to the standard types suggested by the Department of Agriculture, U.S.A., and adopted by this association.

"Consumers of naval stores should, for their own protection, insist that all purchases of rosin they may make, be based upon the official standard of the Savannah Board of Trade, as aforesaid, and that in the event of a difference of opinion as to grading the Bureau of Chemistry, Department of Agriculture, Washington, D.C., is to act as sole arbitrator.

"The new standard rosin type samples have been prepared by and may be obtained from the supervising inspector of naval stores for the State of Georgia, Savannah, Ga. Each box of type samples will be examined by the committee on inspection of naval stores of this association, before being issued, and will have a certificate as to the approval by said committee stamped thereon.

"Savannah Board of Trade."

PAINT MARKETS.

(Continued from page 52.)

has declined here 2c as a result. The following prices are quoted in Toronto.

	Raw.	Boiled.
Single barrels	.80	83
3 to 5 barrels	.79	82
6 to 9 barrels	.78	81

Turpentine.—The market in Savannah is weaker and prices locally have declined 3c per gallon. The following prices are being quoted in Toronto: Single barrels, 65c; 2 to 4 bbls., 64c, and 5-gal. lots, 72c per Imperial gallon.

White Lead.—As predicted in these columns last week, prices of lead in oil have advanced, due to the upward movement in the lead market. Towards the end of last week the price advanced 75c; this was followed by another advance of 75c, making a total of $1.50. Lead is therefore $1.50 higher with the usual 30c extra for less than ton lots. The ton price for pure lead is $10.45 per 100 lb. in ton lots, plus 30c per 100 lb. in less than ton lots. The new schedule is given in the current paint market quotations. Booking date has been cancelled and quotations are subject to immediate acceptance.

Red Lead.—New prices for red lead are also announced and are as follows: Genuine, in casks, $8.25; in kegs, $8.60; No. 1 in casks, $7.75 per cwt.

Zinc in oil.—The new prices for zinc in oil are as follows: Pure, 18c; No. 1, 14c; No. 2, 11½c per pound. These prices, however, are purely nominal on account of the abnormal conditions in the zinc market.

Colors.—The dry color situation is unchanged, some colors being very scarce, particularly blues and vermilions. Prussian blue in oil has advanced from 50c to $1, and Prussian blue in Japan from 75c to $1 per cwt.

Mixed Paints.—An advance in price of mixed paints is expected on account of the increase in cost of lead and zinc white.

Glass.—The situation is unchanged and efforts are being made to adjust the price list to suit prevailing conditions. Business is quiet and prices holding firm.

Putty.—Putty is moving slowly, but prices are firm. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.50
Bulk drums, 100 lbs.	2.70
Bulk drums, 50 lbs.	2.75
Bulk drums, 25 lbs.	2.80
Bulk drums, 12½ lbs.	3.05
Cased tins, 25 lbs.	3.00
Cased tins, 12½ lbs.	3.20

Other Advances.—Among other advances in price noted this week are the following: Red lead, 1c per pound; litharge, 1c per pound; dry white lead, 1c per pound; zinc in oil, 2c per pound; Paris green, 2c per pound. Quotations on some lines of zinc have been withdrawn.

Well strained rosin equal to or better than the type marked "WW" is graded "WW"
Well strained rosin equal to type "WG" but darker than "WW" is graded "WG"

"	"	"	"	"	"	"N"	"	"	"	"WG"	"	"	"N"

From the most Palatial House-

For Every Finishing Need in the Modest Cottage or the Most Pretentious Home or Skyscraper—There is a Perfect Berry Brothers Varnish.

In selling varnishes to your trade—no matter the class or size of the job—do not lose sight of this important fact:

For 57 years Berry Brothers' products have been the choice of home owners, architects, builders, painters and decorators—because of sheer merit.

By selling Berry Brothers' Varnishes—you are promoting the best interests of your customer as well as your own. Among the most widely used Berry architectural finishes and the ones you should sell the most of are these two sterling products:

LUXEBERRY WHITE ENAMEL

Used on woodwork, metal or plaster it gives a beautiful rich, durable and washable finish — whitest white that stays white. It will not check, fade or turn yellow.

LIQUID GRANITE FLOOR VARNISH

A perfect floor finish as lasting as its name implies. It produces a tough elastic surface of surpassing beauty. It will not wear white, check or peel under the hardest kind of hard wear and tear.

Sell your trade a varnish that has proven itself by years of actual service—a varnish that sells on its own merit. Write for dealer proposition.

Weekly Paint Markets

MONTREAL.

MONTREAL, June 10.—The advance in lead has been the feature of the paint situation in Montreal during the week. Pig lead has shown increases in price amounting to about 50 per cent. within the past fortnight, and the prospects are for higher price levels. The first development came a week ago when dry white lead was advanced 75c, and at that level quotations were immediately withdrawn, and higher prices for white lead in oil were predicted. The paint dealers decided late last week upon an advance of 75c on lead in oil for immediate acceptance and delivery. This week another meeting was held to deal with the developments and a second advance of 75c was made, also for immediate acceptance and delivery, the future remaining very unsettled. The lead basis is now $10.45 per 100 lbs. in ton lots, with 30c extra for less than ton lots.

At the same time such has been the advance in zinc that quotations have all been withdrawn, there being reports as high as 32c on the other side of the line. Red lead has also been affected to the extent of about $2.25 per cwt., and other lead products have been similarly advanced. The situation is regarded as very serious, with prospects that the British Government may take charge of all zinc for war purposes, and also commandeer lead as a further step in the direction of insuring supplies for the manufacture of war materials.

Linseed Oil.—Although the oil market has been still weaker during the past week, dealers generally have not changed their quotations. Lower prices are warranted by the position of flax, but at writing there has been a firmer tone on reports of cold weather in Western Canada, and it may be that an upturn will offset the recent decline. Firms which have been maintaining low quotations throughout the unsettled market of the past couple of months still put the price at 80c and 83c for raw and boiled respectively, while the top of the list has been dropped 6c to 82c and 85c. However, the opinion of a manufacturing authority is that the trade price this week, on the existing flax market, should be 78½c and 81c; against is the high quotation of 83c and 86c, which has been maintained by one firm. Crushers report a continued active demand.

	Raw.	Boiled.
1 to 2 barrels	80-82	83-85
3 to 5 barrels	79-81	82-84
6 to 9 barrels	78-80	81-83

Gasoline and Benzine.—A further decline of ½c is noted in the price of gasoline, the flat quotation now being 14c for both drums and tank wagon. Benzine is quoted at 14½c. The movement is very fair, and there is an active demand for lubricating oils and greases.

Turpentine.—Quotations in the trade are following the turpentine market in a downward direction. Refiners are still quoting 64c for the single-barrel basis, and some dealers are down this low with their prices, as compared with 65c a week ago. The top figure is heard at 68c, as against 69c last week.

	Per gal.
½-bbl. lots	68-72
1-bbl. lots	68-64
2 to 4-bll. lots	64-68
5 to 10-bbl. lots	63-67

White Lead.—The remarkable advances in the price of white lead are due to the rapid rise in the lead market which recently followed the lead of spelter, antimony and other metals. Lead has shown gains of 50 per cent. in two weeks, and there are indications that the movement has not reached the limit. Some predictions are heard that even the present price may be doubled before the advance is checked, but against this it is argued that there is practically an unlimited supply, and that higher values are not warranted, and if attained will be the direct result of speculation and market manipulation.

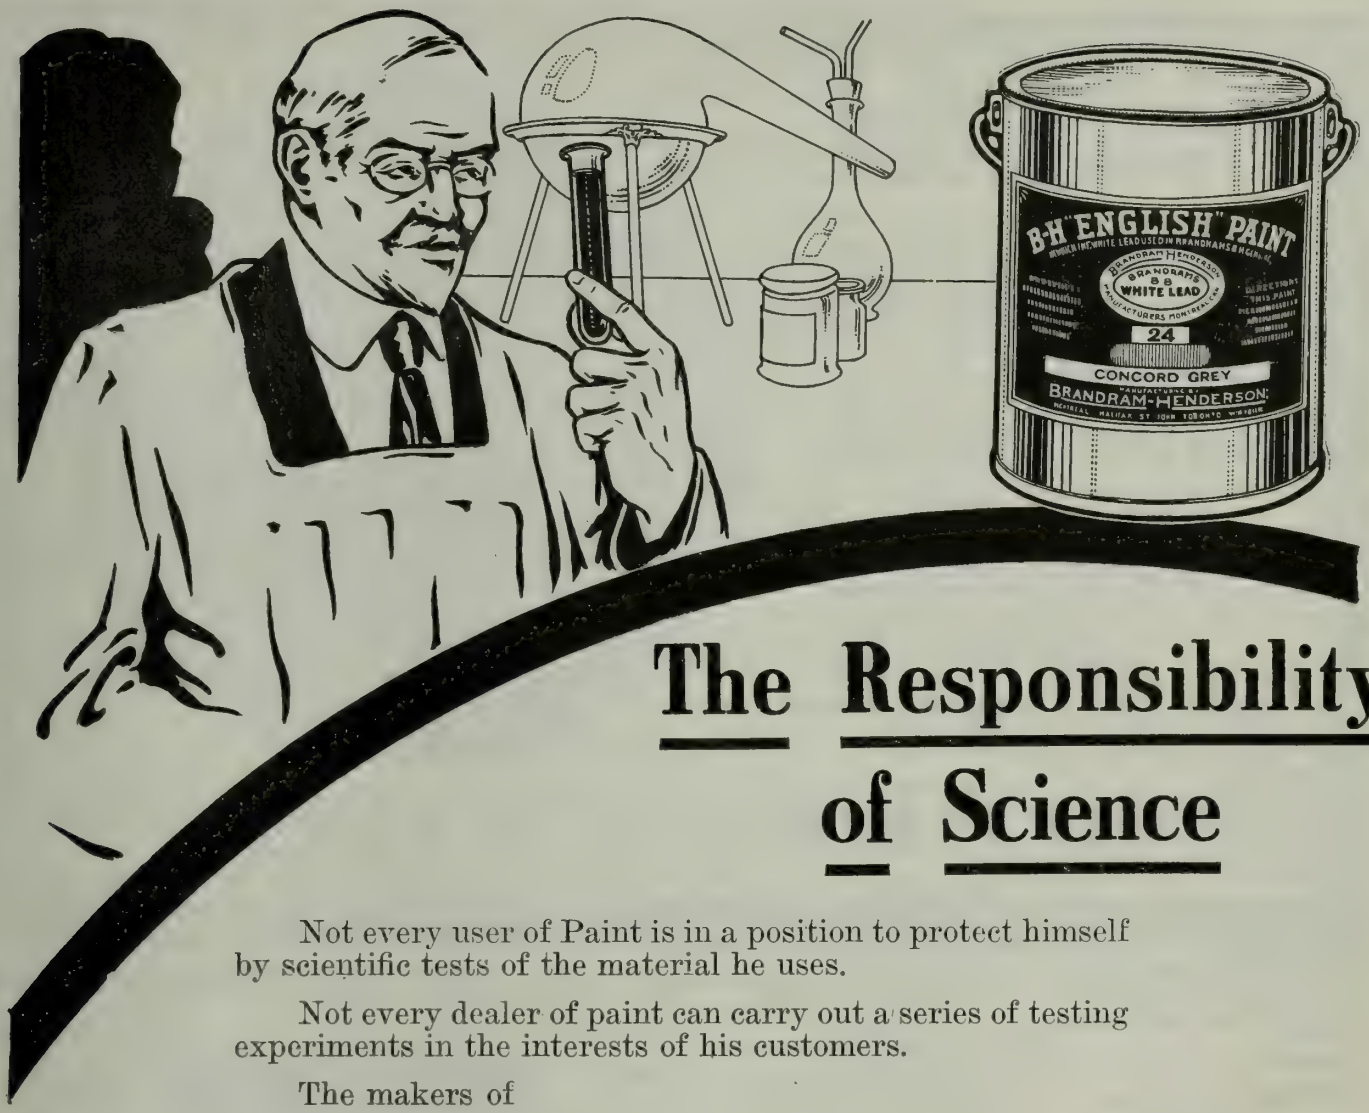
Zinc in Oil.—Zinc has been very seriously affected by the war conditions, and has been following the spelter market in its rapid rise. Quotations of 16c the pound are heard in the trade for pure in 25's, but prices generally have been withdrawn. It would probably cost 10c a pound higher if the price were based upon the present value of raw material.

Dry Colors.—The shortage of dry colors is becoming daily more acute. The present situation is that prices for all vermilions and blues have been withdrawn, and there is small chance of the existing small stocks being replaced for a considerable period.

Colors in Oil.—Colors in oil are being similarly affected and quotations on vermilions and bright blues are canceled in practically all cases. Other reds are also influenced and recent advances of 3c a pound have been made for both Venetian and Indian, the former now being quoted at 16c and the latter at 19c.

Paris Green.—Further effects of war conditions on chemical supplies are to be found in another advance in Paris green. Quotations are up 2c all round. Sulphate of copper and arsenic, which enter largely into the manufacture of the product, have both risen in value as the result of the conditions prevailing.

Glass and Putty.—There is a firmer tone in the glass market recently noted. The same basis list of prices prevails, but there is a difference in that it is being much more closely adhered to than for the past couple of months. Putty is firm on the recent advance, with prospects of further increases in sympathy with the higher cost of whiting.



Whiting.—Freight quotations of 36 shillings, as against 8 shillings a year ago, are advanced as an argument for higher values for whiting, and higher figures are to be looked for when present stocks are exhausted.

TORONTO.

TORONTO, Ont., June 9.—The advance in white lead predicted in Hardware and Metal last week has gone into effect and even at the new prices it is doubtful if the top of the market has been reached. Pig lead has advanced again recently, and a still higher level is possible. Red lead, dry zinc and zinc in oil are also higher. Under the circumstances, an advance in mixed paints is highly probable. Turpentine and linseed oil have declined 3c and 2c respectively on account of weakness in the market. Collections are only fair. Business is showing some improvement. More seasonable weather is bringing about better conditions and the prospects of higher prices have had a tendency to stimulate buying.

Linseed Oil.—The flaxseed market is weaker in Winnipeg and the price of oil

(Continued on page 50.)

The Responsibility of Science

Not every user of Paint is in a position to protect himself by scientific tests of the material he uses.

Not every dealer of paint can carry out a series of testing experiments in the interests of his customers.

The makers of

B-H "ENGLISH" PAINT

have accepted this responsibility, and their guarantee of the correct scientific proportions of

B-H "ENGLISH" PAINT

can be accepted absolutely by the Trade and the Consumer.

The ideal proportions of 70% Brandram's B. B. Genuine White Lead and 30% Pure White Oxide of Zinc as the basis, is not a lucky hit; it is a final deduction from scientific data and demonstration.

Scientific certainty is a strong selling point.

BUFFALO

"A" GAS ENGINE OIL
is offered as a

SURE CURE for ALL Gas Engine troubles due to poor lubrication.

Costly delays and breakdowns during the busy season will positively be eliminated if Buffalo "A" Gas Engine Oil is used.

Sell your customers this oil and it will not fail to make you friends, and increase your business.

Is sold under an ABSOLUTE MONEY-BACK GUARANTEE to DEALERS ONLY.

Prairie City Oil Co., Limited
WINNIPEG, MAN.

Handle your Oils and Gasoline with the
Wayne Pump

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

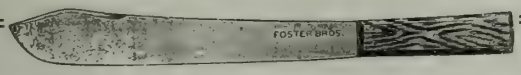
Did You Ever Buy Fireplace Goods From US?

This is not merely a side-issue with us



It is our Business and we are Specialists therein. We give you the best there is in Service and Our Motto is "QUALITY."

WRITE FOR CATALOGUE AND PRICES

The Barton-Netting Co., Ltd.

9 and 11 Pitt St. East, Windsor, Ont.

Long years of experience in manufacturing up-to-date cutlery has placed the name of Foster Bros. as the "Seal of satisfaction" on every piece of cutlery we sell. Every safeguard has been provided to insure long life to our products, great care has been exercised in their making and their finish is extra fine.

We offer a complete line of butcher knives, cleavers and steels. All hand-forged double shear steel, hand-ground and tempered in a manner that has made them world-wide for their wonderful cutting qualities.

No brand of cutlery is more favorably known to-day. It has been on the market for 25 years. Our cutlery is carefully inspected before leaving the factory, and is guaranteed to give satisfaction and to be the highest quality it is possible to produce.

Do you carry them? If not, ask your Jobber for particulars or write for descriptive catalogue.

PAINT AND VARNISH MAKERS

WINNIPEG and CALGARY

A Straight Talk from the Manager

Can You Afford to Lose Money?

IN a certain Ontario city there is just one hardwareman who is not subscribing to Hardware and Metal, and he lost $2.90 thereby in one little transaction last week.

It happened this way: The hardwareman sold a quantity of galvanized pipe to a customer, basing his price upon the last quotation which had been made him by his jobber's salesman. Not having the pipe in stock, he ordered it from his jobber, and was surprised when the invoice was received to learn that his cost price was $2.90 *more* than his selling price. He complained to the jobber, who pointed to the market report in the previous issue of Hardware and Metal, announcing a further advance in the price of galvanized pipe.

"You lost exactly $2.90 on that one sale," said the jobber, "because you were not a subscriber to Hardware and Metal. That amount would have paid your subscription for practically a year and a half."

The hardwareman who does not subscribe for and read Hardware and Metal, is losing money every week. And don't forget that it is even more costly to neglect the advertisements than to overlook the market reports.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

The Duncan Electrical Mfg. Co., Limited

86 Grey Nun Street, Montreal, P.Q.

Sales Agents: Saunders & Wainwright, St. Nicholas Bldg., Montreal.

DELTA FILES ARE GOOD —VERY GOOD

in fact we have found, by exhaustive working tests against other files, that **they cut deeper and have a longer-lasting cutting edge.**

Delta service helps the piece-worker to do a bigger day's work, and it increases the production and reduces the file expense of the Manufacturer.

The "Delta" makes friends immediately everywhere Mechanics will go out of their way to get them.

The connection you build up by supplying "Delta" Files will greatly help the sale of other mill supplies.

This is the only line of files from 3 to 24 inches made absolutely of crucible steel—and we stand back of it with a satisfaction or money-back guarantee.

"Delta" dealers are supplied with attractive display signs, and we circularize their vicinity mentioning them as our local distributors, etc., etc.

Would you like the agency? **We have a splendid proposition to offer, ask about it.**

BAR IRON

THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because—

It is exceptionally convenient, quick acting and an oil saver.

Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted as the flow of oil stops the instant the pressure on the plunger stops.

A sure good sale and splendid profit. Order it now.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

KINDLY MENTION THIS PAPER WHEN WRITING ADVERTISERS

Big Profit and Satisfaction in Selling
"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD.
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test—and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

Send for our new Catalogue F.

Pumps that Carry Good Will

Dealers that sell McDougall's "Aremacdee" Hand or Motor Metal Force or Lift Pumps give their customers lasting satisfaction.

Every pump sold stays sold—gives the dealer no trouble.

They are metal — hand fitted valves — air-tight — strong — lasting.

The big catalogue tells you exactly what the line is—get it for the asking.

No. 1 Fire Pot
The No. 1 Fire Pot
is made to meet the requirements of critical users, and is very popular because it will do a wider range of work than any other Fire Pot on the market. The tank is made of heavy galvanized iron, reinforced and fitted with bottom ring. The burner is swiveled, giving the user always perfect control of his fire. The No. 1 will heat perfectly a pair of twelve-pound coppers and melt a pot of lead at the same time if desired. Try it and you will be pleased and satisfied. Jobbers will supply at factory price. Send for catalog—it's free.

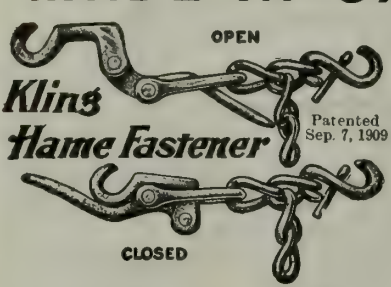
UNION FACTORY
PINE MEADOW, CONN., U.S.A.

PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire



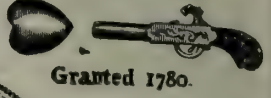
with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.

You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

The Banwell-Hoxie Wire Fence Co., Ltd.
Winnipeg, Man.
Hamilton, Ontario

MADE IN CANADA



Like the British Navy, there is no getting away from it. Always ready for instant use. On or off in a jiffy. Holds like grim death. So simple a child can fasten it. Keeps the hames always uniformly tight. Safe and Strong. A fast seller, with a big profit for the dealer.

All Jobbers should or do sell it. $2.25 per dozen.

The Razor with Perfect Blades

Retail price complete with five Perfect Blades, $1.25. Extra blades, package of five, 35 cents.

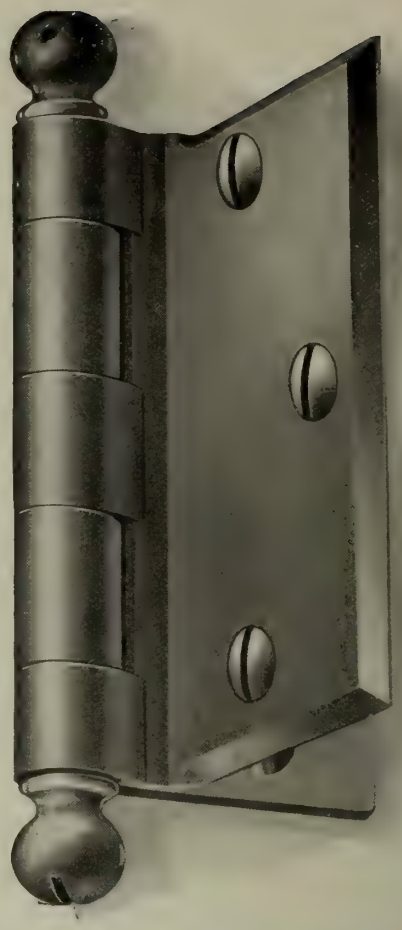
STANLEY Wrought Steel Beveled Half Surface Door Butts

THESE butts are reversible and can be made either right or left hand by simply unscrewing the ball tip, reversing the pin and screwing the tip in the opposite end. One tip is slotted so that it is easily removed.

Time and labor are saved in hanging doors with these butts, as the jamb only is mortised, the door put in place, and the ornamental leaf screwed to the surface of the door.

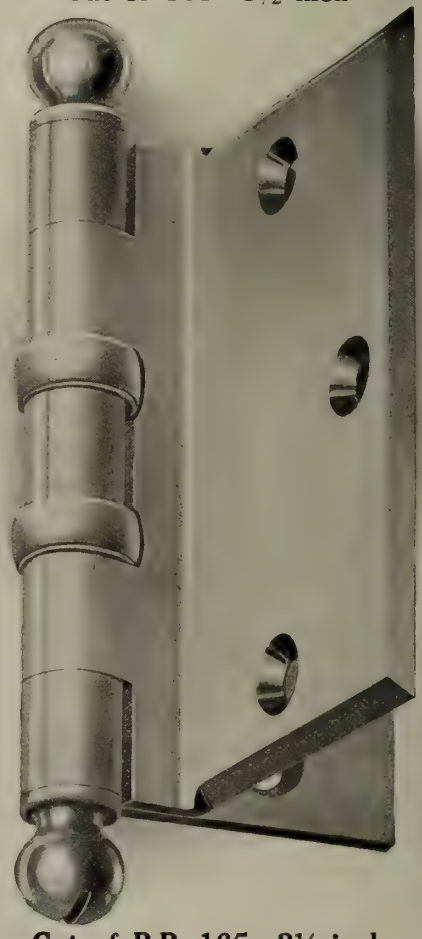
The screws are wrapped separately from the butts, and both are packed in strong anti-tarnish paper to protect the finish of the butts. **Oval head** screws are packed for the surface leaf, flat head for the jamb leaf.

The advantage of oval head screws over round head is apparent; the extra purchase obtained in the countersink holds the butt rigid. Round head screws do not fill the holes, are less attractive, and will *not* hold butts firmly.



No. 165 butts are also furnished with ball bearings and numbered BB165. By the use of these washers all friction in the joint is practically overcome. The hardened tool steel balls are set in a case-hardened raceway and each bearing will sustain a crushing weight of 2,000 pounds.

We also furnish these butts sherardized before plating which makes as good a rust-proof finish as it is possible to obtain. The simplicity of the design and the labor-saving features have made these butts very popular.



Visit our Exhibit at the Panama-Pacific Exposition in Palace of Manufactures, Block 26, corner of 5th St. and Ave. D.

SUMMER IS THE TIME FOR
Electric Irons

During the summer months every woman is in the market for time and work-saving appliances, and when you show her a handsome, well-made electric iron, bearing a well-known trade-mark, and selling at a price well within her income, there isn't much doubt about her buying it. This new UNIVERSAL iron is making customers for every dealer who shows it and its popularity is further increased because it bears the UNIVERSAL guarantee.

UNIVERSAL
Electric Iron

No. E903, $3.00 **Western Zone, $3.25**

The Western Zone includes all Territory west of Winnipeg

This iron contains the same heating unit as used in all UNIVERSAL irons. This unit is made from the finest materials obtainable—highest grade Nichrome Wire and celebrated Ruby India Mica, so wound as to radiate the heat over the entire ironing surface, a greater current being conducted to the point.

If you're not getting your share of the iron business, just put in a small stock of these irons and note the result. You'll find the women of your vicinity willing and anxious to buy them and loud in their praise after a couple of weeks' trial.

For prices, etc., write to your Jobber or direct to us.

Facts About Dazey Churns

More than 350,000 are now in use in hundreds of thousands of homes, in every part of the world.

In practically every town in the United States and a great many Canadian, responsible Dealers in Hardware sell and recommend Dazey Churns.

Are carried in stock by more than 150 of the Largest Hardware Jobbers in the United States and many foreign countries.

That they are undoubtedly the greatest advancement of the last century in churn making — combining Simplicity with a Scientific Principle of separation of butter-making properties of the cream —resulting in the production of a perfect granular butter in the marvelous time of 2 to 6 minutes.

That they have revolutionized butter-making — actually resulting in nothing short of a national conversion.

Special Prices to the Canadian Dealers. Catalog and information on how to increase your churn business will be sent upon request.

30 Years of Service!

Is the "EASTLAKE" Galvanized Shingle Record that Gets You Business.

Nothing talks so loud as "Good Service" in a customer's ear. All the claims you hear for this and that roofing, that they will do so and so, are silenced by the "EASTLAKE" statement: "We have made good in active roof service."

"Eastlake" Galvanized Shingles have been heavily advertised for nearly a third of a century. During all that time they have been more than living up to every claim made, for ease in laying, water-tight, wind-tight and long-wearing qualities. Take a pencil and make a list of the people you know who need new roofs. It will surprise you that there are so many good prospects for "Eastlake" service. Then write us for circulars and advertising helps and see how you will clean up the business. Start to-day.

Hardware Dealers—An exact duplicate of the ad. below appears in the June 10th and 17th issues of "Canadian Machinery." Tear off here and paste on your window with a display of Starrett Tools.

Starrett Tools

Every good toolmaker and machinist accepts Starrett Tools as the standard for accuracy because they are always perfectly reliable and are designed for convenience and efficiency.

Surface Gages

This line includes five styles of surface gages. The most complete type is the Universal Surface Gage No. 257 shown here; sizes 9″, 12″, and 18″ spindles. Prices $3.00 to $4.00.

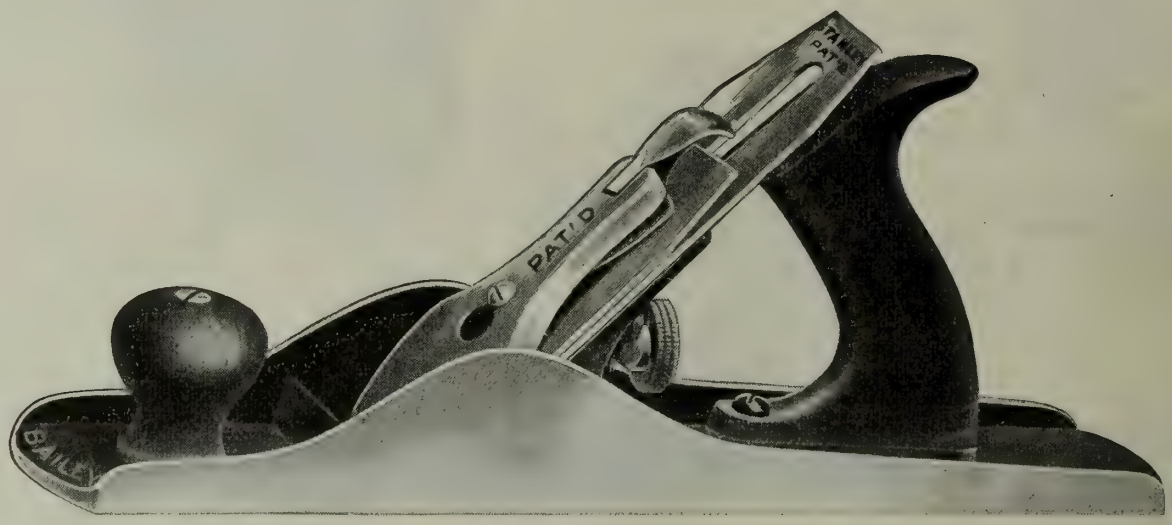
Protractors

The protractor shown here is the Universal bevel protractor No. 362 with vernier for use by toolmakers and machinists in measuring and laying out angles. Sizes 7″ to 12″. Prices $8.00 to $11.75, depending on attachments.

Test Indicator

The segment test indicator No. 64 shown here is useful for testing of work in the lathe, for turning, chucking, or locating on face plate. It may also be used on jig work and other bench jobs in connection with any of our surface gages. Price complete $3.50.

Send for Catalog



If you are interested in the purchase of fine tools, send for free copy of catalog No. 20M.A., giving prices of 2100 styles and sizes.

14 Years A Dealer But Finds No Better Fence Than PEERLESS

Read This Letter

Forestville, Ont., Jan 13, 1913

The Banwell-Hoxie Wire Fence Co.,
Hamilton, Ontario

Dear Sirs:—I have been in the fence business for the last fourteen years putting up fence for farmers and have erected as high as four thousand rods per year. I have put up a good many different makes of fence but can positively say that "The Peerless" has given the best satisfaction taking into consideration even wire, no slack wires, no wires breaking, no wires rusting, and fence holding its tension which keeps the fence tight. "Peerless Fence" that I put up six years ago with posts thirty feet apart is tight and free from rust and does not sag.

Truly yours, E. G. Hooner

He's but one of the thousands of satisfied Peerless dealers—satisfied there's no better, no more profitable, no bigger producer of return orders than Peerless Fencing. His Peerless Fence agency is one of his biggest assets. If you had it you would say the same.

Peerless Farm Fence

is made of Open Hearth steel wire—heavily galvanized in such a thorough manner that it will not flake, chip or peel off. The wires are tough, elastic and springy and will not snap or break under sudden shocks or quick atmospheric changes. The joints are securely held with the "Peerless Lock" which will successfully withstand shocks and strains and yet, it can be erected on the most hilly and uneven ground without buckling, snapping or kinking. We also build a full line of poultry fence, ornamental fence and gates.

We Offer You This Coveted Agency

If you are located in our unassigned territory, we want to offer you the selling rights for this remarkable fencing. We want to add you to our list of satisfied, money making agents. We have a very attractive agency proposition. Want it? A postal brings it. Write today—now.

Trapshooting as a Factor of Profit

The Big Dominion Shoot at Rockcliffe Ranges, Ottawa, was convincing proof of the popularity of trapshooting as a Canadian sport.

Men from every section of Canada made this year's tournament the best ever held. The enthusiasm of the contestants and the interest of the large number of spectators indicate that trapshooting has won its place as a national sport.

Now is the time for dealers to capitalize this enthusiasm and turn it to their own advantage by getting together those men who have shotguns.

The men above are experienced in handling the organization of gun clubs. A card to us will bring one to help you start a club. It's a proposition that promotes good-fellowship, and brings sales over the counter of your store.

These men will tell you Dominion Trap Loads are the best and will prove it by demonstration.

To-day is the day to start your gun club and earn bigger profits.

DAVIDSON'S PREMIER MARATHON

STEEL RANGE

The Range that has Stood the Test of Time

The Premier Marathon is a high-class modern steel range. Every feature of construction has been thoroughly considered.

The greatly increased demand for this range, and its popularity throughout Canada are true testimonials as to its durability. It is simple and perfect in operation, and is very attractive in appearance.

The Premier Marathon is fitted with our New Duplex Draft, which gives perfect combustion at both ends of the fire-box, thus keeping the fire even at both ends. The oven is made of heavy steel, strongly braced on bottom to prevent buckling and warping.

The body is made of 18-gauge polished Wellsville Steel, and heavily insulated by asbestos mill board. Hand riveted throughout.

Vol. XXVII. JUNE 19, 1915 No. 25

Neglecting Lawn Tool Business

A Pedlar Sold 60 Lawn Rakes in One Town Where Trade Was Overlooked by the Retail Trade—How Some Merchants are Pushing Lawn Tools — An Excellent Display and How it Was Arranged.

By T. W. JOHNSON.

An excellent display of lawn and garden tools. Novel features are described in the accompanying article.

IN a neat panel, occuping a prominent position in a recent advertisement by a retail hardware firm, featuring, among other lines, lawn and garden tools, the following appeared:

"Folks judge by appearances—they have nothing else to judge by. They will judge the occupants of the house by the way the lawn is kept. A good, fresh clean shave is as important to the home grounds as to the home owner."

The foregoing would undoubtedly cause many people to stop and think—to wonder whether or not they are giving their lawns and home surroundings the care and attention they deserve—to wonder if they could not greatly improve the appearances of the home by keeping the lawns well trimmed, the flower beds in good order, and the edges of the lawn trim and tidy. With the lawn and garden tool line there is a great opportunity for retail hardware merchants to create new business. Just at this time, when nearly all hardware merchants are endeavoring to keep sales up to a high level, and to take advantage of every opportunity to create new business, there is a splendid opportunity for increasing sales in this line alone. There is not a town or city in Canada where you cannot find lawns that could be greatly improved in appearance if their owners would invest in a few modern tools and spend a few hours each week in beautifying the grounds around the home. This is no reflection on the many thousands of beautiful lawns that may be seen in our towns and cities, for it is doubtful if in any country in the world you will find a larger percentage of the population possessing lawns and grounds around their homes than you do in Canada. But the fact remains that the majority of people have not yet been educated to take full advantage of the many modern "helps" that have been developed and perfected in recent years, and in this connection probably no one is more to blame than the retail hardwareman. A pedlar recently visited a town in Ontario and in a week's time sold sixty lawn rakes; more than the three local hardwaremen had sold in ten years. And the funny part of it was that the pedlar sold a rake almost identically the same as a line the hardwaremen all carried. Furthermore, the pedlar secured 25 cents apiece more for the rakes than the hardwaremen were asking for the same product. The hardwaremen complained about the pedlar taking their trade—but who was to blame? In discussing the matter with the hardwaremen, the writer asked them if they had ever had a window display of rakes and

(Continued on page 35.)

Electric Illuminating Devices--Big Sales

How Some Merchants are Cashing in on a Modern Hardware Line—Many Sales are Made Friends of Soldiers — How One Merchant Neglected His Opportunity—Three Attractive Advertisements.

By W. E. HARRISON.

ILLUMINATING devices — what a variety is now being offered to the public. Only a few years ago electric illuminating devices were a side line with a few of the large hardware and sporting goods stores—to-day there are few retail hardware stores that are not handling electric devices in which dry cells are used.

For a long time most electrical devices for illuminating purposes were looked upon as novelties, and while they are still in one sense novelties, it must be admitted that they are now being looked upon as necessities, and they are finding a ready sale when their advantages are shown to the public.

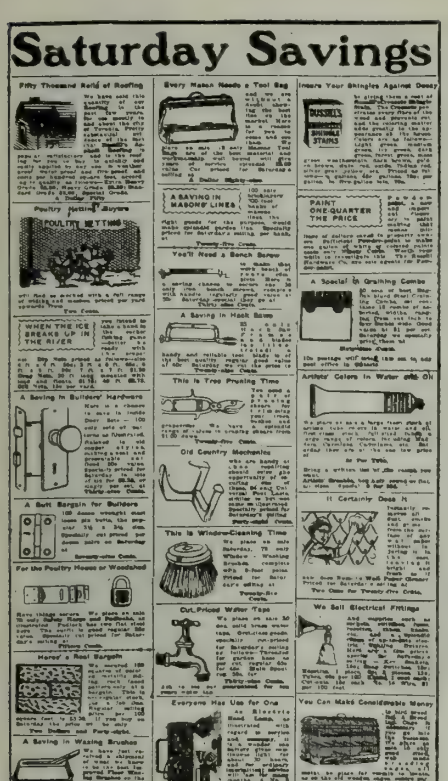
Electric lighting devices have long since passed the experimental stage—at least as far as some of the leading manufacturers are concerned. To-day you can buy lighting devices in many designs, made for use with standard dry cells, safe and dependable.

The Lantern.

Take for instance the electric lantern. It is undoubtedly a wonderful piece of illumination. In producing the modern electric lanterns the makers of the dependable lines have produced an article which has eliminated danger from fire. They have produced lanterns that require no cleaning, need no matches for lighting, and will continue to burn regardless of wind or weather in any place, without causing disagreeable odors or smoke. Compared with oil lanterns the electric are claimed to have the advantages of cleanliness, and that they do not cost any more for fuel than does the oil lantern. For the autoist what could be more convenient than a lantern that can with safety be taken in close proximity to gasoline, or can be used in closely examining any portion of the machinery connected with the auto. The production of a powerful light in safe form, from an ordinary dry cell battery, procurable at almost any hardware store has been one of great accomplishments of modern science.

Much more could be said about the modern electric lantern, but it is only one of the many modern electric lighting devices which have been developed and perfected during recent years.

Another line, flashlights, have been on the market to some extent for some years, but it is only within the past three or four years that the great possibilities of this line have been recognized. Flashlights are made in a large variety of sizes and shapes. They are sold at various prices according to design, finish, etc. There are tubular flashlights; miners' tubular flashlights; vest and coat pocket flashlights; revolver flashlights and many others.



Reproduction of advertisement by T. McAvity & Sons, Ltd., St. John, N.B., featuring electric flashlights.

One Merchant's Experience.

Some years ago before the real value of the flashlight was generally known and before they were perfected and standardized as they are to-day, a retail hardware merchant in an Ontario city was induced by a specialty traveler to place in stock six tubular flashlights. Dry cells in those days were not stocked as they are to-day and the traveler sent along six dry cells for use with the flashlights. The new line was looked upon as a "fad line," and the merchant began to feel that he had been "stung as usual." The only person of those who saw the flashlights and who realized their usefulness was a hotelkeeper who bought a flashlight to use in the bar "after hours." The balance of the stock was placed in a drawer out-of-sight and remained there. As is often the case with some new lines the goods were not shown to customers and therefore did not sell. In time the dry cells became useless—one or two had in the meantime been sold to the hotel keeper —and the hardware merchant and his clerks were firmly convinced that electric flashlights were not a hardware line. That was some years ago. To-day the same hardware merchant, who during recent years has greatly improved his selling organization carries a very complete line of electric illuminating devices—in fact the line is making big profits for him. Not only does he sell a great many flashlights, lanterns, etc., but he now has a large demand for dry cells, from people who have purchased illuminating devices during the past two years.

Flashlights for Soldiers.

Since the first of August last year when the deplorable war broke out, many thousands of soldiers from all parts of Canada have taken up arms to assist the Motherland. Ever since the period of enlistment started, there have been presentations by the thousands.

Reproduction of advertisement by the Russill Hardware Co., Toronto, featuring seasonable goods, including electric hand lamps.

Nearly all persons who had a soldier-friend going to the front wanted to shower him with gifts—and the practice is still going on.

Wrist watches, pocket cameras, pocket cutlery, razors, and many other gifts were purchased and presented in huge numbers. But there is one line that sold and is selling like "hot cakes" to people who want to make gifts to the soldiers—that line is flashlights. Thousands of flashlights have been carried out of Canada by soldiers who have gone to the front—many more will be needed. One merchant who has so far sold many dozens of flashlights states that when enlistment began, many customers entered his store and asked the question, "What have you got that will make a suitable gift for a soldier?" For some days the merchant and his clerks suggested pocket knives, razors and a few other small items. Suddenly the thought struck him that nothing could be more acceptable than a pocket flashlight. Think of the many occasions on which the soldier could use a pocket flashlight. The stock was brought out and displayed in the show window with a neat show card as follows:—"For the soldier, nothing is more acceptable than a pocket flashlight, safe, dependable, indispensable." The idea took splendidly. The line was displayed and advertised as a gift line for soldiers and it certainly became popular. The merchant has not only sold many flashlights since August 1st last, but he is still selling them.

For the Cyclist.

For the bicycle rider you can sell electric bicycle lamps. They are made in a variety of styles, and at various prices. This style of flashlight is being sold successfully by a great many merchants. There are also special lamps for motor cycles, and every hardwareman knows that the number of motor cycles in Canada is increasing at a very rapid rate each succeeding year.

Other Lines.

Many other lines of electric lighted goods are now being sold. They include electric lighted alarm clocks; watch holders; candlesticks, and numerous other ornamental and useful novelties.

For the Autoist.

The advent of modern electric illuminating devices has been a great boon to the autoist. There are approximately 80,000 autos in use in Canada, and the number is increasing at a very rapid rate. Every auto owner is a prospective purchaser of one or more illuminating devices.

Inspection and trouble lamps, combination dash and trouble lamps, dash lamps, hand lamps, flashlights and many other other styles may be sold to the autoist.

Auto owners are not all found in the cities by any means. Reference to the automobile license directories indicates that thousands of auto owners are found in the small towns and rural communities.

The Farmers' Trade.

The farmer is also a good prospect. Many lanterns and flashlights suitable for use by farmers have been developed and are now procurable.

Taken all round electric illuminating devices are an excellent line to sell. There appears to be an unlimited field for the sale of these goods and there is always a large amount of repeat business in supplying dry cells.

Reproduction of advertisement by Mills Hardware Co., Hamilton, featuring many seasonable lines including flashlights and dry cells.

Accompanying this article are three reproductions of advertisements by Canadian retail hardware merchants, who sell electric illuminating devices. The ad. of McAvity & Sons, Ltd., St. John, N.B., shows a big range of flashlight lamps, etc. In the Russill Hardware Co. advertisement one electric lantern is featured. In the Mills Hardware Co. advertisement an electric lantern and dry cells are featured.

A well-arranged display of table lamps, Tungsten lamps and electrical goods—There are several good ideas in this window that can be used by window-trimmers when arranging displays of electric lighting devices.

Good Sale for Table Lamps

Western Retailer Gives His Experiences in Selling Electric Table Lamps — How the Window Displays Assist in Making Sales—Lamps Carry a Good Profit.

By a Western Canada Retailer.

THE hardware merchant of to-day is ever on the look-out for new goods, new ideas, new methods, and if he will be successful in his business he must necessarily be on the look-out all the time. We have arrived at a stage when we must use a certain amount of diplomacy regarding the goods we handle. We sometimes think that certain goods would not sell; then there are lines that we would like to handle, only we are afraid of trespassing on some other fellow's business. I have often heard this thing discussed in regard to barber supplies, the drug store and the hardware store. Why should hardware merchants handle those things, and so on? It is an old story now, and will continue on the same lines for a good many years to come. The saying that "competition is the life of trade" is correct, and we find that out every day of our lives.

During the last few years a good proposition has entered the hardware business in the shape of electrical goods.

I know of certain hardware merchants who run special electrical departments in connection with their hardware businesses. By this I mean installation of fixtures, motors, elevators, etc., but a great many hardwaremen are not at present in a position to look after that kind of business. There is, however, one class of the electrical business that practically every hardware merchant who is in a town or city where electric light is available has an opportunity of securing, and that is the trade in electric irons, toasters, stoves, and all the other electrical appliances which have taken such a hold on the public in recent years.

There is another stage in the selling game which is assuming large proportions, and it will be well for the merchant who is in on this thing to watch the development.

We are, as you are no doubt aware, living in an electrical age, and people sem to buy everything that can be used with electricity. The cry for modern homes has grown to such an extent that people are not content unless they have the latest and most up-to-date appliances and conveniences in their homes. Among these conveniences is the electrical table lamp or desk lamp.

This business has assumed big proportions in the last few years, and is going to be even greater in the days to come. To link the electrical table lamp with the appliances is good business. Having had considerable experience in this line, I can speak confidently, knowing the possibilities that this class of business affords.

The electric table lamp as a rule is in itself an ornament, and appeals strongly to the ladies. In my experience I have had most of my dealings with the ladies in selling lamps of this nature. They know how they would like to see their home arranged, and they also know the kind of a lamp that would go well with the furnishings in the home. It is well, therefore, to cater to the ladies in this particular line. The various designs that can be bought are unlimited; but for the hardware merchant it is advisable to buy only one of each line, as the ladies like to be exclusive, whether it be in a hat, dress or table lamp. They like to have the **only one.** Electric table lamps make good big profits for the dealer; seldom do we get less than 50 to 100 per cent. profit on a sale.

The breakage is practically nil, as most of the lamps are packed in take-down style. At this season of the year I find it to our advantage to make special displays of electrical lamps and have always found them very beneficial

to our business. I have often been besieged with the question: "What should I give to a couple who are going to be married?" I have talked cut glass, cutlery, refrigerators, stoves and everything else in the hardware catalogue, and when I have named all the everyday articles I could think of, I have suggested a nice table lamp. Invariably it has proved the right suggestion for a hard-to-suit customer. It appeals to every person. The average hardware salesman when asked for a suggestion for a gift will usually suggest a set of carvers, or something along that line. If you sell fancy table lamps, just try your customer the next time you have the opportunity with that suggestion. Press this thought home with a prospective customer—that an electric table lamp is both useful and ornamental. A well-spread table always looks more cheerful with a nice lamp to light up the scene. For reading purposes the table lamp is so much easier on a person's eyes, that it is almost necessary to have a lamp of this nature in the home. When not in use it still remains an ornament. Many of the designs that have recently been developed in electrical lamps are exquisite. Many beautiful designs have come out recently in mission effect to correspond with the mission and fumed oak furniture that has made its way into many homes in the last year or two. The hardware merchant who has a stock of these lamps would do himself and his customers a good turn if he would during the summer months make a display of electric lamps occasionally. The young married couples as well as the older folks are always on the look out for something for the home, and even if they are not able to purchase at the time your display appears, they will always remember where they saw a certain style of lamp that they desired. I have had one experience of this nature happen when we were not making a special display of the lamps, but had a very nice one in the window to finish off a display of casseroles. We had the casseroles displayed on pedestals and slabs, and the centre of the window was arranged in such a way that we could display all the small casseroles without the larger ones hiding them. In the centre of the casseroles the window trimmer placed the lamps. The lamp was placed there to brighten up the surroundings, and was not intended to be part of the display in the selling sense of the word.

It eventually proved to be a sale, made from that display. A lady came into the store more than two months after and asked one of the salesmen if we had a certain lamp that had been in the window some time ago.

He could not help her very much, so he went and asked the window trimmer. He knew the moment she mentioned the casseroles the lamp she had in mind. I think it took the window trimmer about three minutes to sell that lamp and give her a receipt for $13.50, the price of the lamp.

It isn't always the results you get from the display at the time it is in your window that count. People never seem to forget a good window display, and when they want an article in that particular line they will be sure to remember where they saw the goods displayed. The very nature of the designs and shapes of the electric stand lamps lend themselves to good displays, and I have seen several good displays made with this class of goods.

A nice clean window with a good assortment of stand lamps, each one lighted, makes a very beautiful display. The hardware merchant has just as good a chance to display and sell these goods as the electrical store, and probably better.

Most of the wholesale hardware houses devote a part of the catalogue to these goods, and in ordering from the wholesale house it eliminates to a certain extent the danger of overstocking. Around Christmas time is a good season to display this line of goods. Use them in connection with your regular displays, and, as they are more or less artistic in themselves, you will find that they put a life into your displays.

And then, again, at this particular season of the year you have a bigger scope for making sales than during the summer months. Some people do not care to pay a big price for a Christmas present, but you will find a certain class of people who will buy good presents and pay a fair price. These are the people who make it possible for the merchant to stock electric goods. Whether the gift be for father, mother, sister or brother, a reading lamp is always most acceptable. Always make it clear that it is a thing that can be used every day in the year. If it is not lighted it is there as a thing of beauty. Most people would use a set of carvers just when they had a roast or fowl, but we don't care as a rule for roasts or fowl every day, so the carvers are put away in the case until needed. The fancy box of fruit knives are used when we have company, and the cut glass is used on special occasions only; but a reading lamp is there all the time, and the memory of the gift and who gave it is always fresh. In connection with special displays for these goods it would be to the benefit of the merchant to have the lamps displayed on show cases in the store. If convenient, a cord can be extended to the show case and the lamps lighted during busy periods. You will notice a marked improvement in the appearance of your display. There is a touch of refinement about a nice lamp that is not obtainable from other sources, and lamps well placed through the store will give your store an attractive appearance.

I have often found in our own business that sales have been made directly from this idea of display. Use and display lamps wherever possible, and I don't hesitate in saying that you will be surprised at the results you obtain.

NEGLECTING LAWN TOOL BUSINESS.

(Continued from page 31.)

lawn tools or advertised them in season in the newspapers. Of the three hardwaremen not one could say that he had ever made a special feature of lawn tools or brought them to the attention of the public. Here were three hardwaremen who took it for granted that if the people in town wanted lawn tools they would go to the hardware store and ask for them. I feel sure that if a pedlar went into that town and peddled lawn sprinklers, turf edgers, hedge shears, grass shears, or any of fifty other articles used around the grounds of a home, he could do a big business. Why could he? Because he would show the goods. Pedlars do not hide the goods under counters or in the back of a store, or under the cover of a wagon. They show the goods and explain their uses—and this is where some hardwaremen seem to fall down. But there are other hardwaremen who push the lawn and garden tool line very hard during the summer season. They know that if you get one of your customers taking a pride in his home surroundings, you are cultivating a good and permanent customer, who will buy not only lawn tools, but paint, fencing and an endless list of other hardware goods.

Accompanying this article is an excellent window display of lawn tools. This display was arranged for a Western Canada hardware firm, and window trimmers can secure many ideas from this window. The scenic background, showing a country home with a lake in front, and trees, shrubbery and a lawn in the foreground, was surrounded by poultry netting, on which were nasturtium vines. The bottom of the window at the rear was covered with green crepe paper, while the front had a coating of sand. About a foot from the back of the window a piece of lawn fencing was stretched across the full width of the window. This made a splendid setting for the display of lawn and garden tools, which are shown in the front of the window, and include lawn rakes, rollers, turf edgers, forks, spades, hose, lawn mowers, shears, sprinklers, nozzles, hedge shears, and

(Continued on page 54.)

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, JUNE 19, 1915 No. 25

THE SAD PART of it is that the pessimists never enlist.

* * *

THE MAN who thinks it first is not so great as the man who does it first.

* * *

COURTESY IS A necessary attribute to any one dealing with the public.

* * *

ADVERTISING THAT establishes good-will and confidence is the kind that builds for the future.

* * *

NOW IS THE time to figure ahead on your recreation this year—what about the weekly half-holiday?

* * *

THAT "COMPETITION is the life of trade" is an old saying which very often appears in the light of a fallacy. Competition is a good thing to a certain extent; when it goes beyond that stage, it becomes ruinous to all concerned.

Electrical Goods

NOT many years ago, electricity meant only light—to-day electricity means a great deal more than light — it also means heat and power. Manufacturers of electrical appliances have not been slow in developing modern appliances adaptable for household use, and the public has not been slow to realize the many advantages to be gained by using these appliances in connection with household and other duties. Electricity will do the sweeping, washing, cooking, lighting, ironing, toasting, and many other things. Electricity will run motors big and little. It will run the vacuum cleaner in the home or it can be used to operate the machinery in our largest factories. Electricity has really developed into a servant. And with the development of electric illuminating devices and electric appliances, a splendid new trade avenue has been opened up for the retail hardwareman. Electrical devices and appliances are finding a ready distribution through the retail channels of the Canadian hardware trade. It is doubtful if the hardware business—old as it is—has ever seen a line with greater possibilities. Despite the fact that many thousands of devices and appliances have already been sold, the line is still in its infancy, and as time goes on and new products are developed to meet the needs of the expectant public, the hardware merchant who follows the development of electrical goods and sells the new lines as they are produced, will reap a rich harvest of sales and good profits. And one of the best ways to keep in touch with new developments is to watch the advertising pages of Hardware and Metal, where the advertisements and suggestions of reliable manufacturers will be found.

Lead and Spelter

THE unsettled and unparalleled condition of lead and spelter are still creating havoc in the hardware trade and causing sudden and startling price changes. Considerable space in last week's issue of Hardware and Metal was given to the spelter situation and all phases were gone into at considerable length. The American Metal Market this week sounds a note of warning in connection with lead and spelter in an editorial which says in part:

"The sensational rise that has taken place in spelter and lead, the rise in the former being 16c per pound within three months and in the case of the latter from 4.20c to 7.50c within three weeks, finds no explanation in the increased demand for war munitions or exports of the metal, nor in the trade speculation that has attended the latter article during the past two weeks. Neither can it be laid to any reduced output. As a matter of fact, since this advance has commenced there has been a very large increase in output. In the case of spelter, the production which was 380,000 tons last year is now proceeding at the rate of 500,000 tons, and while the output of lead is not as well known, the independent plants have certainly increased their output at the rate of 25% in the past few months, which is quite natural to take advantage of the enormous profits which present prices afford and which are beyond the dreams of avarice. No such advance could have taken place without extraordinary and enormous purchases. Who have been the buyers, and why?

"We have good reason for believing that there has been enormous buying of spelter and lead by a *coterie* of individuals not connected with the metal trade, but closely connected with large German financial interests, and that their operations are being conducted from New York. We understand that the orders emanating from this *coterie* have been distributed through second and third hands to disguise the operations, to give the impression that they are from various quarters in connection with war orders and for export. We also believe that some prominent interests in the metal trade who have the selling of a considerable proportion of the American production

of spelter and also large sellers of lead, have lately had their suspicions aroused, and have in the past few days been closely examining the orders tendered them, and are now declining to sell except where they are positively certain the material is for consumption for American industrial purposes for home use, or else to be put into materials to be made in this country as in the case of ammunition.

On paper these purchases show sensational profits, but they are only on paper, and unless the production of these metals is to be curtailed they are sure to show a heavy loss to the manipulators, as an enormous increase in production is certain as a result of the profits to producers at present prices. Still if these purchases result in retarding the supply of these metals (spelter and lead) for war munitions, the final loss that may follow will be as nothing to the results they may accomplish if the object for which they have been made, has been to interfere with output of ammunition. Since Germany finds she cannot stop shipments from America of said ammunition, she may be endeavoring to harass the makers of ammunition by cornering the raw supplies.

If our view is correct, both spelter and lead are in a dangerous position at present prices, and the trade cannot say they have not been warned."

Canada's Crops

A PRESS bulletin issued by the Census and Statistics Office, Ottawa, is of special interest as giving the preliminary estimate of the area sown to grain crops in Canada for the present season and the condition of these crops on May 31, as reported by correspondents. The reports received show that in the Maritime provinces, cold and rainy weather, during May, delayed farm work, and at the end of the month a good deal of seeding had still to be completed. In Quebec and Ontario, cold winds and frost, coming after the exceptionally warm weather of April, retarded growth. In these provinces the frosts injured pastures, but did little damage to grain crops. In the North-west provinces growth was checked somewhat by cold and frosty nights, but, on the whole, conditions continue to be favorable.

Wheat is estimated to occupy this year a total area of 12,896,000 acres, which is more by 1,662,500 acres, or 14.8 p.c., than the area sown for 1914, and more by 2,602,100 acres, or 25 p.c., than the area harvested in 1914. Not only is the wheat area this year, under the double stimulus of patriotic impulse and high prices, 25 p.c. in excess of last year's harvested area; but it is also the largest area ever sown to wheat in Canada. The area to be harvested of fall sown wheat is 1,208,700 acres, the balance of 11,687,300 acres having been sown this spring. Whilst every province shows an increase in the wheat area it is the three North-west provinces which preponderate in the national effort to produce more wheat.

Oats are estimated to occupy a total area in Canada of 11,427,000 acres, an increase over last year's harvested area of 1,365,500 acres, or 13 p.c.; barley, 1,518,400 acres, as compared with 1,495,600 acres last year; rye, 106,440 acres, against 111,280 acres; peas, 189,470 acres, compared with 205,950 acres; mixed grains, 453,000 acres, against 463,300 acres; hay and clover, 7,788,400 acres, against 7,997,000 acres, and alfalfa, 94,480 acres, against 90,385 acres.

Meeting Obligations

A NUMBER of manufacturers and wholesalers have drawn attention to the failure on the part of some retailers to deal in a judicious manner with drafts that are presented to them. By this it is not meant that they do not meet them. That is implied in the point taken, but this is not the main complaint. It is the carelessness, shall we call it, or neglect or disregard of their commercial reputation which seems to be at the bottom of the attitude, or lack of attitude, of some merchants, particularly at the present time. Some supply houses have been more or less accustomed to wait a little longer than usual for the payment of some of their accounts since the War began, and collections have not been up to the mark. But it is the manner of dealing with these obligations to which objection is taken, and rightly so. There are some cases where a draft will be sent to the retailer and where it will be refused without any explanation or any promise as to future payment. Surely this is bad business and an action which will seriously injure the credit of the retailer. The supply houses, for the most part, have shown themselves very reasonable under present conditions but the least that is due them if payment cannot be made, is that the failure to do so should not be passed over in silence, but an explanation and some information given as to when the creditor will be likely to meet his obligation.

The result of this would be, in the majority of cases, that the manufacturer would retain his respect and faith in the retailer and the latter's credit would not be impaired. The difficulties under which most merchants are laboring now are recognized, and at no time is the element of courtesy and of candor in the relations between the creditor and the debtor more advisable. Letting a draft go by default is the worst kind of practice. The inevitable result is to stiffen the resolution of the wholesaler to cut down on the credit he is giving, and the retailer will be the loser.

Work of the Trade Newspapers.

THE work of the trade newspapers of Canada, and the part they are playing in the matter of boosting business—and particularly the trade newspapers published by the MacLean Publishing Co—is emphasized in the following extract taken from an address by Lorne A. Eedy, proprietor and editor of the St. Marys Journal, St. Marys, Ont., given before a recent convention of weekly newspaper men:—

> "The trade newspapers of Canada are doing a very great deal to encourage the local retailers to advertise and to advertise intelligently in the country weekly. Their departments on retail advertising have many good practical ideas both for the country merchant and the country publisher. For the more progressive weeklies which "sell copy" the sample Ads. published in the excellent MacLean papers are most valuable."

This is just another evidence of the important ad-suggestion services Hardware and Metal is giving its readers. It might also be mentioned that Hardware and Metal is the only Canadian trade paper, conducting an up-to-date electro service department for the benefit of readers.

What Other Hardwaremen Do

Halifax, N.S., is to have a branch of the Retail Merchants' Association of Canada.

* * *

Sumner Co., Moncton, N.B., won first prize in the Philadelphia Made Hardware contest.

* * *

J. B. Stallwood, hardware merchant, Maryfield, Sask., is an issuer of marriage licenses.

* * *

Ingram & Davey, Ltd., St. Thomas, have sold eight carloads of wire fencing since the first of the year.

* * *

The Smith Foundry Co., Fredericton, N.B., has received an order for war munitions from the British War Office to the value of $125,000.

* * *

The Purdom Hardware Co., London, Ont., and the Mills Hardware Co., Hamilton, Ont., have recently added automobile delivery services. Deliveries are made on schedule time to various sections of the city.

* * *

A great many people were attracted to the window of the Hubbell Hardware Store, Thamesville, by a display of curiosities which Orval Hubbell received from his brother Earle, who is serving his country at the front.

* * *

The George Taylor Hardware Co., Ltd., Cobalt, last week advertised, as a special for Saturday only: Wall paper remnants, from 6 to 10 rolls, some with borders. 27 cents each. The north window of the store contained a large showing of goods specially priced for Saturday selling.

FREE GIFT SALE.

The Rogers Hardware Co., Charlottetown, is conducting a free gift sale, and large space is being used in the newspapers featuring the goods on sale, and in each instance quoting the price. A souvenir spoon is given free to persons purchasing goods to the value of $1 or over. In one of the advertisements which is illustrated with cuts and occupies space four columns wide and the full length of the page, the firm makes the following announcement and offer:

Hardware and Metal requests retail hardwaremen to send in copies of their newspaper advertisements, circulars, catalogues or other advertising matter which they may issue from time to time. Please address all matter to Hardware and Metal, 143-153 University Ave., Toronto.

Free Gift Sale.

"It isn't very often that you hear of a sale of this kind. Usually you are asked to pay full price for the articles listed in this ad, but beginning to-morrow and continuing for one week, we are going to offer some items from our splendid stock of household hardware.

"Compare these prices with any local or foreign catalogue in your possession, and you will be convinced that our goods cannot be beaten in quality and price."

Beautiful Souvenir Spoons Given Free.

"Just think of it: A Silver Plated Souvenir Spoon given free to persons purchasing goods to the value of $1.00 or over. Each spoon is wrapped in the Manufacturer's certificate of guarantee, which absolutely warrants satisfaction to the user. These souvenir spoons sell everywhere for 25c each, but we are making the above special offer for this sale. The following is a list of the present great war heroes, of which the above spoons are souvenirs:

"Kitchener, Roberts, Beatty, Joffre, Fisher, French, and the P. E. Island Coat-of-Arms."

The goods offered for sale are on display in the four show windows of the Rogers store.

YOUR GOOD WILL.

In a recent 3-col. ad., full page length, the Mills Hardware Co., Hamilton, ran in a panel in the upper portion of the advertisement the following:

YOUR GOOD WILL.

"We are not receiving any complaints. Every customer seems perfectly satisfied. It looks as if our efforts to make you feel at home in our stores and to render you a service that is not surpassed, or even equaled, in Hamilton, were meeting with gratifying success.

"But we want to make sure. Will you help us with your suggestions? Will you let us know if there is any point we have overlooked that would add to your convenience? We have your good will; our growing business proves that. It is invaluable to us and we wish to do everything possible to augment and cement it."

The advertisement was splendidly set up and illustrations were shown of a great many seasonable lines. Prices were quoted in each instance.

39 AT FRONT FROM McAVITY & SONS.

Since the outbreak of war there have been several lists published, showing the large representaton from hardware houses offering for service overseas. The honor roll has been commendable, and while several such have been published in Hardware and Metal, what is probably a record for Eastern Canada at least is that containing the names of those who have joined the colors from the offices, stores, and shops of T. McAvity & Sons, Ltd., St. John.

The list numbers 39 names, and includes the following: Lieut. Col. J. L. McAvity, Major T. Malcolm McAvity, Capt. Ronald A. McAvity, Lieut. P. D. McAvity, Major C. I. Dunfield, Fenwick Tait, John Varnon, James Telfer, John K. Yrifts, Vincent Lee, Daniel Oram, Gustave Salamson, Alex. Nesbitt, Fred Marshall, Wm. Scribner, Chas. Noddin, Albert V. Sowery, Wm. Smith, George North, George Spinney, George McNutt, Chester B. McBay, George Kelley, Louis

Gallagher, Anthony Howe, Frank J. Murphy, Ernest Jenkins, Harold Duplissea, Fred B. Campbell, W. R. Allan, Arthur Crayton, Lloyd Bradshaw, J. T. Davidson, Harry Bibson, B. H. Colpitts, C. Allen Coster, Edgar Brown and William Burton.

* * *

TEST SELLING CASE.

Stratford, Ont.—A fine point of law arose when a representative of an oil company was charged in the police court with selling oil without a license. The defendant's counsel contended that though the former sold oil direct to citizens from a car in the local railway yards, he was only filling orders taken by an advance agent, and that this does not constitute "sale" under the transient traders' act. The case was adjourned until July 2 to clear up, if possible, the knotty point. This is a test case, as the same method was followed by the company at many points in Ontario.

* * *

KEEP CANADIAN FACTORIES HUMMING SALE.

Toronto's big department stores are not the only ones running special sales to keep Canadian factories busy. On Friday and Saturday of last week, W. Magladeny, hardware merchant, New Liskeard, ran a special sale, that was advertised in the newspapers as follows:

FOR FRIDAY AND SATURDAY ..

We have arranged with the manufacturers of Graniteware to put on a

KEEP CANADIAN FACTORIES HUMMING SALE.

Come early and get first choice, as these prices are made to sell the goods.

Talking Points from Hardware Ads

A CLEAN-SHAVEN LAWN—Folks judge by appearances—they have nothing else to judge by. They will judge the occupants of a house by the way the lawn is kept. A good, fresh, clean shave is as important to the home grounds as to the home owner. Our "Lawn Shavers" are made by the largest lawn mower firm in Canada. The three-blade machines are $3.50, $4.00 *and* $4.50, *and the four-blade machines* $5.00, $5.50, $6.00 *and* $6.50. *P.S.—We keep shavers for men folks too; both the "Safety First" and the other kind.—Mills Hardware Co., Hamilton, Ont.*

REFRIGERATORS—The souring of milk over night, or the spoiling of foods set aside for another day will surely convince you that now is the time to purchase that refrigerator. We have in stock a size convenient for the smallest family or one capable of looking after the requirements of a large family and as prices range accordingly, we can guarantee you a satisfaction in price and size that is difficult to obtain elsewhere.—George Taylor Hardware Co., Cobalt.

"SWAT THE FLY"—"Swat the Fly" for which we have the proper style swatter at 5 *and* 10c *each, but much of this swatting is unnecessary, if at a small cost, you provide your doors and windows with proper screens. Our doors are well made, of selected clear pine. We carry in stock all the common sizes in each style of door. You have the advantage of a large range of styles to select from. Only two styles of ten being shown here. Prices in every case are for doors complete with spring hinges, pull and hook. The hinges are the best screen door spring hinge on the market. Ask for folder showing cuts of different styles.—Martindale & Co., Alliston, Ont.*

WEDDING GIFTS—Most every day is someone's wedding day. You who are interested in some particular wedding day in early June will do well to pay a visit here.

We are showing a fine collection of suitable and appropriate articles in Silverware, Brassware, Copper and Nickel-Platedware, Cutlery, etc.—Ingram & Davey, St. Thomas, Ont.

WHY WASTE FUEL and heat the house to a high temperature and tire yourself out doing your ironing when you can buy a———Electric Iron for $3.50, *with a guarantee for* 10 *years? Use it for* 30 *days, if not entirely satisfactory, return it and get your money back.—J. B. Ross, Oshawa, Ont.*

BINDER TWINE prices have already advanced since the first orders for the season's requirements were placed by dealers. The probabilities are that there will be a further advance in prices in the near future. Farmers will do well to place orders early, thereby making sure of a supply of twine at the lowest prices going.

In view of this we will take orders for twine up to June 15th, *at the following prices.—Wm. Chalmers, Deloraine, Man.*

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—As We See It—Customer First-Always.

AS WE SEE IT.

From McClary's Wireless.

SOMETHING seems to have started us meditating upon the subject of price-cutting. And in connection with it there are lots of things we can think—and say—if you will lend us your ear; but what we fail utterly to figure out is any adequate answer to our own questions: "What possible advantage does a tradesman derive from a course of price cutting? Why does he do it?" What's the answer?

Now, as we see it, the idea works out like this:

Suppose, as an instance, a tradesman buys a certain line of goods, the ultimate cost of which to him is $2.60 each. He adds 15 per cent., selling the article at $3.00. If his sales numbered 1000 a year, this would give him a gross profit of $400.00.

But some day this tradesman takes out his pencil and discovers with a very little figuring that if he were to sell double the quantity at $2.80, instead of $3.00, his profit would still be $400.00. And he thinks that the reduced price would, very likely, double the volume of his sales; so he reduces it. And allowing that he is correct in his hypothesis and that he does double the number of his sales, and does realize the original amount of profit, he is still at a decided disadvantage; because, to double one's turn-over entails approximately twice the original expense of handling and storing, with something of cost added, for the additional capital required. So that while the gross profits would total the same as in selling at the higher price, the net profits would be very considerably reduced.

But how often does any reasonably possible cut in price double volume of sales? Ah! there's the pinch. Not often, we wager! Because for one thing, price-cutting is as contagious as German measles; there is a case of it here to-day; to-morrow there is another across the street and two more down the block; and next day the city has an epidemic of it, and the result is that trade continues to flow through exactly the same channels as before. There may be a little more of it—a reduced price will stimulate buying to some extent; but the increase so realized is, comparatively speaking, small—not at all commensurate with the sacrifice necessary to secure it.

And another point is this, that a price-cutting campaign once started, is like a runaway horse; you have no idea where it is going to end up, but you can be jolly well sure that before it is stopped, something is going to be smashed and someone hurt.

In our own city one line of trade was not long ago started on a price-cutting war; and just the other day we noticed the advertisement of one dealer in that line which read:

"No other dealer will dare to sell at these prices."

And in view of the fact that he was offering at 86 cents an article regularly listed at $1.50, and for which 99 per cent. of the purchasers would be quite willing to pay that figure, his contention seemed indisputably correct.

It reminded us forcibly of a story we once read of two little boys who were left to amuse themselves at a window while they waited for their mother. When the mother returned, there was only one of them at the window, and asked where his brother was, he explained, "Well, you see, we were playing who could lean out the farthest, and Willie won!"

It is just so with the game of price-cutting the only way to win is to go over the edge and get smashed.

Price-cutting means a war which one dealer declares upon another, when he becomes jealous of his commercial success or—not ambitious (which is good), but covetous (which is bad) of more trade territory. And the results are much the same and proportionately just as disastrous as in any larger war of nation upon nation; both lose incalculable benefits, exhaust their resources and gain little or no real advantage.

Again the questions—"What possible advantage? Why do it?" What is your answer?

* * *

CUSTOMER FIRST—ALWAYS.

From American Artisan.

IT is worthy of more than special notice that the mercantile concerns which have made the greatest progress during the past thirty years are those who have been most liberal in their relations with those who buy from them.

The old adage, "The Customer is Always Right," which is credited to the late Marshall Field, is one of the rules now recognized in more or less strict manner by practically every retail merchant who claims to operate his business on modern principles, and although this principle may at fist glance seem to work against the interests of the merchant, because unscrupulous customers may take undue advantage of the liberal policy based upon this rule, it has been the experience of every one who has watched the progress of those who adhere to that principle, that they have prospered and advanced far quicker than have those who are not so liberal.

The following statement taken from an advertisement of one of the greatest retail clothing stores—if not the greatest—in the country may well be taken as a guide line for retail hardware dealers who have a sincere desire to fill their position as distributors in the most efficient manner in their particular locality:

"In the year to come we have set our course straight ahead—unwaveringly will we follow those precepts of merchandising which concern themselves with the principle of 'Customer First.'

"We shall continue to conserve your interests, preserve your confidence and deserve your patronage. The word serve works itself into several parts of our business beliefs."

Junior Clerk's Page

Clerks and Show Windows

Good Windows are Developing Faster Than Good Window Trimmers—Many Opportunities—The Junior Clerk Should Study Window Trimming.

"I WOULD like to get in touch with a good hardware clerk—preferably one who can trim the windows." The foregoing is often heard. A great many hardware merchants when looking for new clerks ask for those who can trim the windows. Nearly every retail firm to-day realizes that the window if properly looked after is a splendid business-puller—and every junior clerk should gather as much information as he possibly can about the art of window-trimming. If you do not have an opportunity of dressing the windows in the store where you are employed, study the methods of the man who does the window trimming. You can pick up new ideas every time the window display is changed. Follow the trade journals. Watch for the many excellent reproductions of splendid displays that appear in Hardware and Metal. If convenient, for you to do so, keep a scrap book of window displays that appear in this paper. They can be referred to at a later date when you have charge of the window trimming, and when you need ideas for seasonable displays. Many of the best hardware window trimmers in the world are employed in Canadian retail hardware stores, and some of the best prizes offered during recent years, in competition open to the world have been won by Canadians. The display manager of a large concern in the United States in an article which appeared recently in a contemporary referred to window trimming in part as follows:—

"All the new stores being erected are equipped fully and, as fast as possible, the old windows and fronts are being remodeled so as to give an air of 'up-to-dateness' to the establishments and afford better opportunities for the display and sale of merchandise. While other nations may surpass America to the extent and variety in the manufacture of merchandise, this country leads the merchandising procession in the methods of display and distribution, due greatly to the efforts of the display man and his treatment of the store frontage.

"None of us should cry about the lack of opportunities; there is a chance for all of us, as the field of window trimming is unlimited and grows greater every day. New ideas are springing up all the time for us to take advantage of and work out in the show window. It is this condition which makes the window trimming profession so interesting, as every day's work is different and we are continually working along lines to bring out something new to make our windows the most attractive in the city.

"Lest we should forget, the show window should not only fulfill its mission, which is to attract attention and arouse admiration, but should, from the taste of the display man in his selection, handling, grouping and harmony of selling, be thus made to act as a magnet to cause the desire to purchase and be the great silent salesman of the store, the one who is always on the job twenty-four hours a day. Good windows have increased faster than good window trimmers, so it's up to every display man to make an extra effort to go it "now."

"The word "now" is a great little word, and all these "do it nows" are the little milestones on the road to success. After we pass a "now" and spell it backwards it spells "won."

"Merchandize may be well bought, rightly priced and well advertised, but the real "punch" and that which puts "pep" to the business and causes a credit on the right side of the ledger is the display. The display, if properly planned and executed, strikes home and causes the exchange of merchandise for real money."

"Lots of times we hear the question asked, "Where can I get new ideas for proper settings in my windows?" Ideas are everywhere and right now there is a wealth of ideas to be found in magazine covers, trade papers, post cards, moving picture shows, bill boards, etc."

The junior clerk who wishes to become efficient in all branches of hardware retailing should carefully study the art of window trimming.

ARE YOU IN CONTROL?

Do you control your business, or does your business control you? Just think that question over for a few minutes, because on its answer depends not only your success but your comfort during business hours and after.

To control your business you must know what you want to do and how you are going about it. To do this you have to plan out your work and then work out your plan. This is a man's job. It requires hard concentration of thought and action, but gives you the satisfaction of seeing things take shape under your direction and in accordance with your wishes rather than just happen, and it is worth the effort. Think for a moment of the poor devils you know who just podder along, taking what comes to them, without caring to inquire how or why. They have their worries just as much as the man who plans, but the tragedy of it is their worries are over things that have already happened and are beyond remedy.

CHARTERING SAILING VESSELS.

St. John, N.B.—General business conditions continue satisfactory. There is a great deal of activity about the harbor, due to the increased demand for lumber in Great Britain. Owing to the scarcity of steam tonnage a large number of sailing ships have been chartered. Not for twenty years have there been so many sailing vessels in the harbor as there are at present. Between forty and fifty have been chartered, for this season's loading. The highest steam charter has been 137 S. It is estimated that the city harbor revenues for the past five months will exceed those of last year by $15,000, or over.

Strathroy, Ont.—James Bogue and H. E. Mihell have purchased the hardware business known as the Avery Hardware Company.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

New Firm.

The Peerless Heater Co., manufacturers of gas stove appliances, has registered.

Hardware Burglarized.

Rouleau, Sask.—The hardware store of C. Worden & Co., was burglarized and $37 in cash taken.

Obituary.

Hamilton, Ont.—The death occurred here of Jas. F. Leishman, president of the Canadian Rector Gas Heating Co.

Meeting of Managers.

Montreal, Que.—A meeting of the district managers of the Sherwin-Williams Co. of Canada, Ltd., was held here last week.

Addition to Plant.

Welland, Ont.—Work has begun on an addition 70 x 80 feet to the plant of the Canadian Billings-Spencer. Six new drop hammers will be installed in the new building and it is said that 25 men will be added to the staff.

Another U. S. Prize Won by Canadian.

In the recent window display contest, conducted by the Ohio Varnish Co., manufacturers of Chi-Namel, open to American and Canadian firms, the third prize ($15) was secured by Chas. Byford, of the Bond Hardware Co., Guelph, Ont.

Who Can Make Them?

A Canadian firm wishes to get in touch with a manufacturer who will undertake to make small cases, similar to jewel cases, in aluminum, in large quantities. Particulars may be secured from the Editor Hardware and Metal, Toronto.

Foundry Re-opens.

Picton, Ont.—The D. J. Barker foundry has resumed operations under the name of the D. J. Barker Foundry Company, who purchased the business from the former owner, D. J. Barker. The plant is under the management of J. Hickey.

Business Changes.

Toronto, Ont.—A. J. Barrett, hardware, has retired from the firm. A Winch & Co. continues hardware business separately.

Toronto, Ont.—Joseph Owen, hardware, has sold out to R. D. Ross.

Toronto, Ont.—A Winch & Co., paints, etc., have dissolved, Alfred Barrett withdrawing.

At the Front.

Private H. A. Ellis, of the 106th Winnipeg Light Infantry, has been reported wounded. Before enlisting Mr. Ellis was an employee of the G. F. Stephens Co., Winnipeg.

R. R. Lockhart, of the Canadian Engineers, Winnipeg, has been wounded. Before enlisting Mr. Lockhart was superintendent of the Electrical Water Heating Co., Winnipeg.

Hardwareman Returns From Europe.

R. P. Cowan, of W. H. Thorne & Co., Ltd., hardware merchants, King street, St. John, N.B., returned home this week after a European buying trip. He found business conditions fairly normal in some parts of France, and England presenting very little change since the war. Mr. Cowan attended the British Industrial Manufacturers' Exhibition in London, the object of which was to show Britain's ability to compete for foreign trade against Germany. The exhibition was a decided success.

Second Vice-President C.M.A.

S. R. Parsons, who has been elected second vice-president of the Canadian Manufacturers' Association, is a native of Port Hope, where he was born some fifty years ago. Mr. Parsons is president of the British American Oil Company, Limited, chairman of the Board of Directors of the Ontario branch of the Canadian Fire Insurance Company, and for the past four years has acted as chairman of the transportation committee of the Canadian Manufacturers' Association.

G. E. Pearson In Hospital.

Many friends in the hardware trade will be interested to know that Geo. E. Pearson, Associate Editor of Hardware and Metal, who went to the front with the Princess Patricia's Light Infantry, during the early stages of the war, is in the Royal Victoria Hospital at Netley. Mr. Pearson was reported sick with meningitis on May 8 in Belgium, after the last thick engagement of the Princess Pats. A cable received within the past few days states that Mr. Pearson stands a good chance of recovery.

Fire Losses.

Montreal, Que.—The offices of the Canada Stove and Furniture Co. were destroyed by a disastrous fire, which destroyed sixteen buildings in St. Laurentian. The main building of the company, in which a plant has recently been installed for the manufacture of shells, was saved by the efforts of the employees of the company, who did good work with a couple of lines of hose. Mr. Eugene Panneton, manager of the company, stated that their loss would be in the neighborhood of $8,000 or $10,000, but that their manufacturing activities would continue as usual.

Dominion Incorporations.

The Canada Needle & Fishing Tackle Co., of Toronto, has been incorporated with a capital stock of $50,000, head office, Toronto.

St. Lawrence Machinery, Ltd., capitalized at $50,000, head office Montreal, to manufacture and deal in machinery, boilers, etc.

Hartwell Brothers, Ltd., capitalized at $40,000, head office, Walkerville, Ont., to manufacture and deal in hardware, woodenware and lumbermen's supplies.

The F. S. Newman Co., Ltd., capitalized at $100,000, head office Winnipeg.

WHAT OUR READERS SAY.

George Botsford,
Wholesale and Retail Hardware,
Kingston, Ont.,

MacLean Publishing Co.,
Hardware and Metal,
Toronto.

"I am glad to get Hardware and Metal. It always has been a good paper, and now it seems better than ever. The Prognostication manager must have frequent occasion to say, "I told you so," when prices advance, obedient to his forecasts.

With Best Wishes,
Yours truly,
GEO. BOTSFORD.

Man., to carry on the business of merchants and manufacturers, ironmongers, foundry-men, machinists, tinsmiths, plumbers, etc.

Canada Needle & Fishing Tackle Co., Ltd., capitalized at $50,000, head office Toronto, to carry on the business of manufacturers of and merchant factors for the sale of needles, pens, fishing tackle, sporting goods, etc., and to take over and carry on the business of Henry Wilkes & Co., Toronto.

The Walpole Rubber Co., of Canada, Ltd., capitalized at $100,000, head office Montreal, Que., to carry on the business of Manufacturers of all kinds of rubber goods.

North American Magnesite Co., Ltd., capitalized at $200,000, head office Montreal, to prospect and dig for, refine, smelt or otherwise treat, manufacture and deal in magnesite, graphite and other minerals.

Death of James Simmonds.

The death is announced of James Simmonds, at Dartmouth, N.S. In 1870 Mr. Simmonds went into the stove business with Thomas Allen, of Dartmouth. A few years later he entered into business with the late John White, in Halifax and Dartmouth. In 1877 he was associated with the hardware business of Irish & Smith, later known as Geo. E. Smith & Co., which firm dissolved in the year 1896, Mr. Simmonds carrying on the business in Dartmouth. In 1893 the old Fuller wharf at Halifax was acquired and a joint stock company was formed, and to-day is one of the largest wholesale hardware businesses in the province.

Mr. Simmonds took a great interest in the welfare of the town of Dartmouth, and served several terms as alderman, and was mayor in 1888.

He also served as president of the Board of Trade, was for some time president and managing director of the Dartmouth Electric Light Co., and at the time of his death was president of the Starr Manufacturing Co.

He was also one of the most active members of the Masonic Order in the province. He was a Past Master of Eastern Star Lodge, A.F. and A.M., Dartmouth; Past District Deputy Grand Master; Past Grand High Priest, Royal Arch Masons; Grand Preceptor in the Knights Templars, and an active member Ancient Accepted Scottish Rite, in which he was to have taken the 32nd degree.

He was also an active member of Christ Church, and served as vestryman on several occasions.

Mr. Simmonds is survived by his wife, one daughter and two sons, Ralph B. and J. Roland, of the hardware firm of James Simmonds, Ltd.

Plans are being prpared for a new school building at Moncton, N.B. It will be one of the largest in the Province.

A St. John, N.B., report states that a syndicate of Toronto capitalists have taken over manganese rights in Jordan Mountain district and will have the same explored this summer. The Markhamville manganese areas are also to be developed at an early date.

The customs receipts at the Port of St. John, N.B., for May, 1915, were $177,312.88, as compared with $121,458.63 for the same month last year, an increase of $55,854.25. The inland revenue receipts for the month were $19,334.84, an increase of $4,444.33 over May, 1914.

Hardware Letter Box

Lawn Mower Sharpeners.

Duncan Munn, Ripley, Ont.—"Kindly furnish us with names of firms manufacturing machines for sharpening lawn mowers."

Richards-Wilcox Canadian Co., Ltd., London, Ont.; R. Woon & Co., Oshawa, Ont.; Coldwell Lawn Mower Co., Newburgh, N.Y.; Luther Grinder Mfg. Co., Milwaukee, Wis.; National Machine & Stamping Co., Detroit, Mich.—Editor.

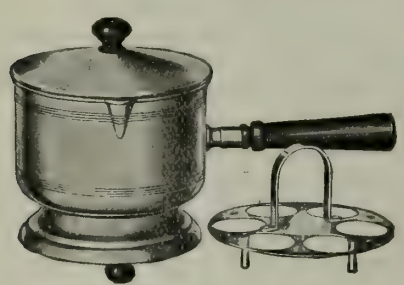
Rock Island Mfg. Co. Catalogues.

Two very attractive and useful catalogues have been issued by the Rock Island Mfg. Co., Rock Island, Ill. Catalogue 1 consists of 96 pages, well illustrated and featuring many hardware lines, including electric and gasoline irons, gas irons, charcoal irons, sad irons, clothes-line reels, sickle grinders, foot-power grinders, tool grinders, kitchen grinders, emery wheel dressers, cement workers' tools, roof brackets, tampers, mauls, jack screws, floor scrapers, hammer drills, grist mills, combination forge, anvil and vise, fireproof boxes, and other lines.

Catalogue H consists of 47 pages, and features an extensive range of vises. The manufacturer's slogan is: "Vises, a type and size for every service." Copies of the catalogue can be secured by writing to the above address.



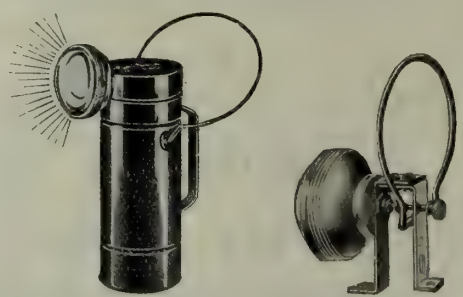
New Hardware Goods

Offered Canadian Hardwaremen

UNIVERSAL ELECTRIC BOILER.

Landers, Frary & Clark, New Britain, Conn., are placing on the market a new product called the "Universal" electric boiler. The makers state that for warming soups, stews, etc., the Universal Electric Boiler will be found most useful. It will cook small quantities of vegetables and will serve the light housekeeper in many ways. The makers also claim that in the small home or apartment where economy of room is a factor, the Universal boiler will be most appreciated because of the many uses it can be put to.

Attention is called to the egg rack which is furnished with each machine. This allows six eggs to be boiled at once and is made with a handle for conveniently lifting the eggs out of the boiling water. The boiler is large in diameter



Universal Electric Boiler.

permitting eggs to be easily and readily poached.

Another use for the Universal boiler is the heating of water for shaving. The heating unit is large and the water can thus be quickly brought to the desired temperature. The man of the house will it is claimed, welcome this handy and dependable means of securing his shaving water whenever it is needed.

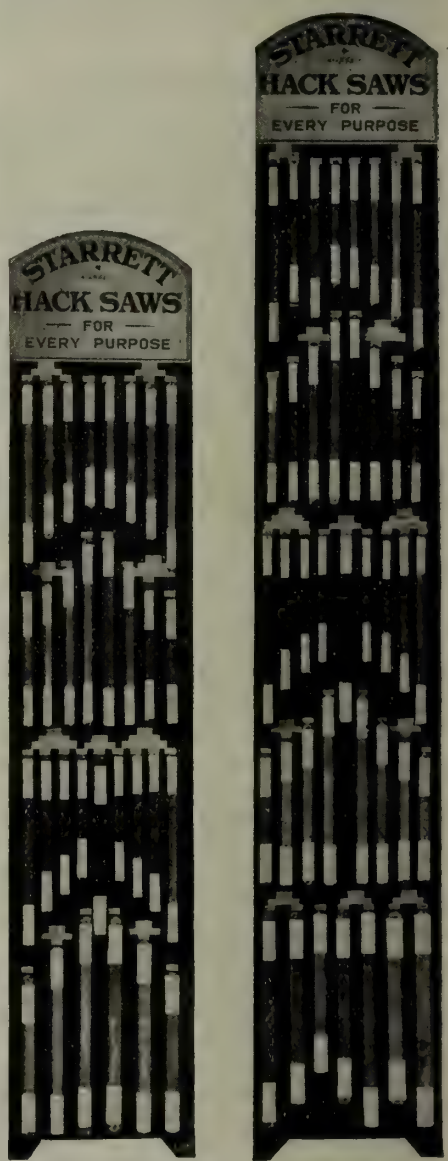
PRACT-EL-LITE LANTERN.

Central Telephone & Electric Co., 310-312 North 11th street, St. Louis, U.S.A., offer to the Canadian trade the Pract-El-Lite lantern and the Pract-El-Lite battery attachment here illustrated. The Pract-El-Lite lantern is claimed to be a scientifically constructed electric lantern for use with any No. 6 battery, and is invaluable for doctors, watchmen, farmers or anyone wanting a practical, safe and dependable lantern. The lantern is fitted with a silvered reflector, fire polished bull's eye lense and special tungsten bulb. The container is ribbed to prevent the battery from touching the sides. A thoroughly insulated switch covered with a patent application is said to make it impossible to short circuit the lantern.

Showing Pract-El-Lite lantern on left and Pract-El-Lite battery attachment on right.

The Pract-El-Lite battery attachment is said to be constructed on the same high plane as the lantern but in a less expensive form. It is equipped with the same silvered reflector, special tungsten lamp, and heavy fire polished bull's eye lense. The attachment can be used, it is claimed, on any dry cell battery. All Pract-El-Lite devices are claimed to be immune to weather conditions and are not affected by wind or rain.

217 BULL DOG JAWS.



Richard Wilcox Canadian Co., Ltd., is now making a new product called R. W. No. 217 bull dog jaws, here illustrated. With these jaws the makers claim you can make a good pipe wrench out of your ordinary monkey wrench in ten seconds. The jaws are made from good hard steel and are strong and durable. A small display card is furnished with each half-dozen. The jaws are packed half-dozen in a box. They fit any wrench up to 18 inches and retail at 40 cents per set.

No. 217 Bull Dog Jaws.

STARRETT DISPLAY BOARDS.

The L. S. Starrett Company, of Athol, Mass., have developed two hack saw display boards which, it is said, solve both the problem of displaying the saws and that of keeping the stock in proper arrangement. These hack saw boards are arranged with the name of the company

Showing two new hack-saw display boards developed by the L. S. Starrett Co.

McClary Portable Field Kitchen.

at the top, below which are grouped a variety of saws. Two standard sizes of these boards have been adopted. The larger one contains the following saws:

3 doz. ea. No. 103	8"— 9"—10"—12"
3 doz. ea. No. 102	8"— 9"—10"—12"
3 doz.ea. No. 253	8"— 9"—10"—12"
3 doz. ea. No. 250	8"— 9"—10"—12"
3 doz. ea. No. 252	8"— 9"—10"—12"
3 doz. ea. No. 258	8"— 9"—10"—12"
3 doz. No. 250 B	12"
2 doz. ea. No. 112	8"— 9"—10"
3 doz. No. 112	12"
2 doz. ea. No. 112 B	8"— 9"—10"
3 doz. No. 112 B	12"
1 doz. ea. No. 114	10"—12"—14"
1 doz. ea. No. 255	12"—14"
1 doz. ea. No. 254	12"—14"
2 sets No. 249 E	

The smaller board bears the following assembling:

3 doz. ea. No.103	8"— 9"—10"—12"
3 doz. ea. No. 102	8"— 9"—10"—12"
3 doz. ea. No. 253	8"— 9"—10"—12"
3 doz. ea. No. 250	8"— 9"—10"—12"
3 doz. ea. No. 252	8"— 9"—10"—12"
3 doz. ea. No. 258	8"— 9"—10"—12"
3 doz. No 250 B	12"
2 doz. ea. No.112	10"—14"
3 doz. No. 112	12"
1 doz. ea. No. 114	10"—12"—14"
2 sets No. 249 E	

Either of these boards is given by the L. S. Starrett Co. to hardware dealers who buy, at regular prices, the saws included in the set.

PORTABLE FIELD KITCHEN.

The accompanying illustration shows a new type of portable field kitchen specially designed for the Canadian contingent at the front. This kitchen was designed and built by the McClary Manufacturing Co., at London, Ont., and has successfully withstood searching trials before it was accepted by the military authorities. The value of such equipment is demonstrated by reports received covering the engagement at Langemarck in Belgium recently, where it was stated that the troops went into action without previously having had a meal. Such a condition would to a large extent be obviated by the use of portable kitchens which could be operated much nearer the firing line than the ordinary type of cooking apparatus. This would lessen the discomforts and greatly increase the efficiency of the troops.

In addition to actual cooking, a day's rations can be carried in the bins or compartments in the front section for five hundred men. This amount can be cooked at one time as each of the containers is emptied it can be refilled and cooking proceeded with. The kitchen being portable it can be used in the trenches and meat can be cooked in addition to soup and coffee prepared.

The front section as shown in the illustration is known as a fireless cooker and is made of steel plate insulated inside to retain the heat in the containers. In the front are bins or compartments for carrying supplies while at the back are drawers for butcher knives and other utensils. The seat on the top can be used as a table.

In the rear section, also made of steel plate and insulated, is an oven with a fire at the side. Above is a tank with a capacity of 32 imperial gallons for boiling water. In the front part there are four containers each having a capacity of 11 gallons with a fire underneath one chimney doing duty for both fires. Both sections are equipped with standard artillery wheels and draft gear for two horses is attached to the front section.

The war will return to Canada many crippled and disfigured men. Let the industries of Canada, by the exercise of wise precautionary measures, so reduce their toll of injured as to offset, as far as possible, the abnormal increase from war.

Praise for Canadian Products.

The Montreal Gazette of a recent issue publishes a number of interviews with passengers on the Missanabie, which left Liverpool on May 7, and passed through some of the wreckage of the Lusitania.

"A number of settlers for the West were on board. One Englishman who has come to Canada on government business, expressed great satisfaction with the way in which Canadians shipped goods made here for use at the front. There was a large consignment of messtins from Canada, which was the admiration of the London dockers. They were drawing the attention of their fellows to it. They found it a marvel of method, for all the directions regarding the messtins were placed in the most convenient positions. The number of tins in each package, and every bit of information which could be of use, was entered on the boxes in a way that facilitated the work of handling very greatly."

The above is particulary interesting in view of the fact that it is said the messtins were made by a Canadian firm, the Thomas Davidson Mfg. Co., Ltd., Montreal.

CATALOGUES AND BOOKLETS

Fireplace Fixtures.

Stover Mfg. Co., Freeport, Ill., recently issued an attractively gotten up catalogue of fireplace fixtures, including andirons, fire baskets, spark guards, fire sets, fire screens, gas logs, dampers, thresholds, clean out doors, knockers, and a number of special products. The catalogue is well illustrated and a complete description with dimensions is given of each article featured.

* * *

Supplies for Hardware and Machine Dealers.

E. B. Plewes Co., Winnipeg, Man., have issued catalogue D 1915, consisting of 48 pages and featuring such lines as belting, belt lace, babbitt, boiler tools, braces and bits, cap screws, cotter pins, chain hoists, electric drills and grinders, files, grease cups, lock washers, packing, machine tools, pipe cutters and vises, steel taps and dies, and many other lines. The prices appearing in the catalogue are guaranteed to October 1, 1915, with the exception of leather goods, the markets for which are firm and unsettled. The catalogue is well illustrated. Copies will be mailed on request.

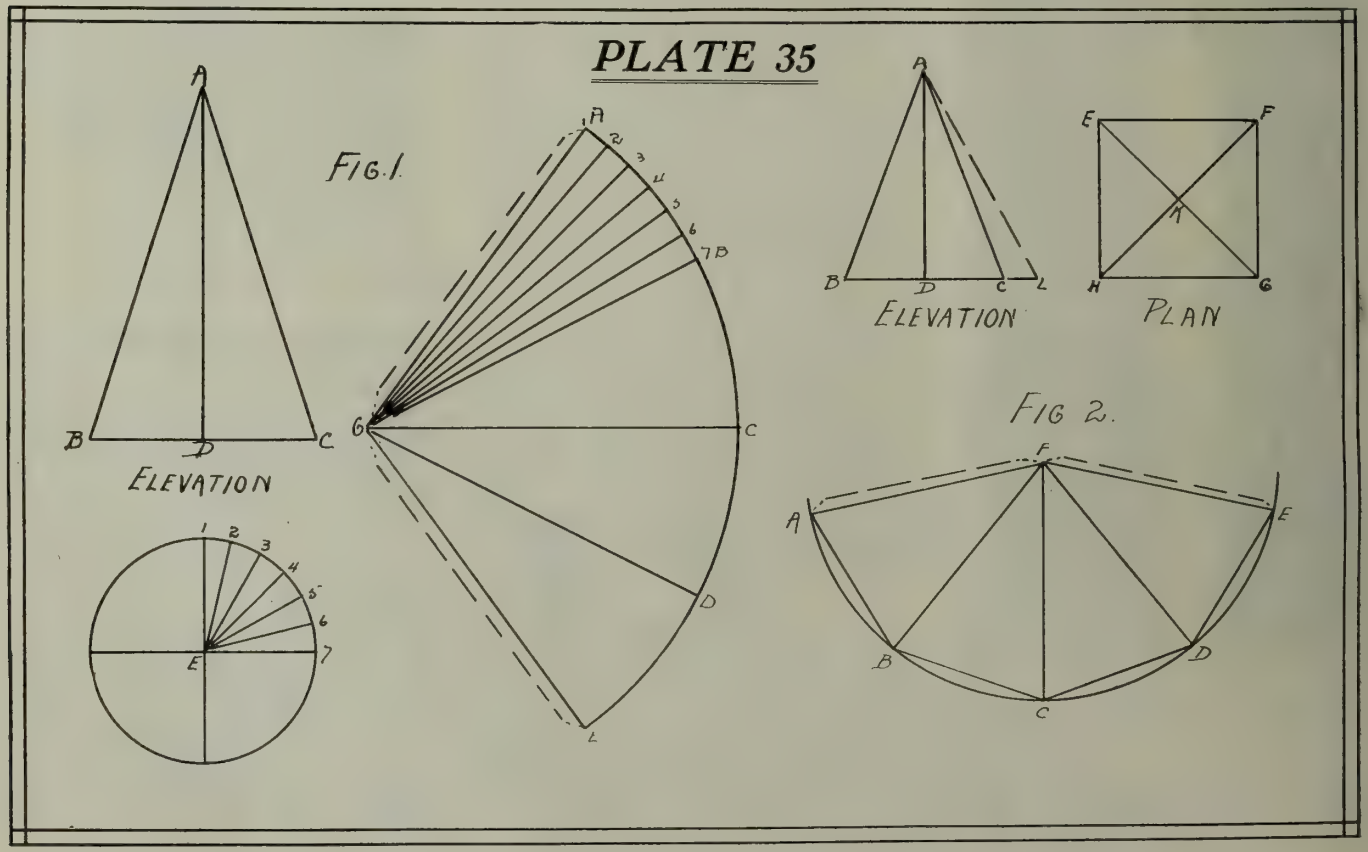
Practical Course for Sheet Metal Workers

Article No. 35 of Series

By CHARLES SEIVERS

IN drawing out patterns for irregular forms—that is, for articles of different sizes and shapes at top and bottom, such as square or oblong base and round or oval top or oval base and round tops, also when the base and top are not on the same plane, etc., in any of these or other cases, the method used to develop the pattern is called triangulation, and requires a careful study to understand thoroughly. It consists of laying out the article in a series of triangles, the plan forming the base of the triangle, the straight height at the different points forming the altitude, and the hypotenuse or diagonal formed by the base and altitude thus procured is the measurement required to lay out on pattern.

In this article are shown two figures, of what can be called triangulation, although never considered as such. In Fig. 1 is a cone, the base B-C and the altitude A-D. In plan this shows as a circle with diameter equal to B-C, centre E. Divide the circle in plan into a number of equal parts, as shown in quarter section, by 1-2-3-4-5-6-7, and from each point draw lines to centre E. These being the radii of the same circle, are equal to one another; and having same altitude, A-D on elevation, their A-C or A-B will be the radius for all the triangles formed by the altitude A-D and radii on plan.



The accompanying article is No. 35 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

With A-D as a radius, draw an arc, as A-B-C; draw a line from the centre until it intersects circumference of the arc, as G-A. From A, set off on the circumference of arc the divisions on circle in plan, as shown by 1-2-3-4-5-6-7 on quarter section, repeating them to complete circle. When set off, draw line from last point, as E to centre, then the outline A-B-C-D-E-G will form pattern of cone.

It is to be observed that if a number of pieces were cut, as outlined by A-D-C in elevation, and set on plumb with their base over the radii, they could be swung around to any portion of circle; but if they were not a circle, but an ellipe, they would only cover radii with same base, and the position of each radius is determined or fixed from each other by the equal divisions on circumference.

In Fig. 2 is another example. A-B-C shows elevation and E-F-G-H-K the plan of a pyramid. The altitude of pyramid is shown by A-D. Extend the base of triangle A-D-C, and from D set off the distance K-E on plan, as shown by D-L; then draw a line joining A-L. With A-L as a radius, draw an arc, as A-B-C-D-E-F. From the centre F draw a line intersecting the circumference, as F-A, with compasses set at the distance

(Continued on page 51.)

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

Following the many important price changes announced in Hardware and Metal's market reports last week, further important and far-reaching price changes are announced in this week's report. Many of the changes, although very important, are not unexpected, for repeated warnings have been given in this paper that the advances were bound to take place as a result of new conditions created by the war and by the trend of the metal markets. One of the most important changes this week is the advance of twenty cents per gallon in the price of ready-mixed house, floor and porch paints; ten cents per gallon on barn, bridge and roof paints; and fifteen cents on flat oil paints. Lead in oil is very firm following the big advances of last week and even higher prices are expected. Linseed oil and turpentine are weak. Brass and bronze screws have advanced in price, also copper rivets. Galvanized sheets and sheet lead have again advanced. Manila and hemp ropes have advanced ½ cent per pound. Galvanized fence hooks, staples, wire, etc., are very firm and further advances are in effect at some points. In the metal markets spelter and lead are the centre of interest, although the former is now showing a weaker tendency. Aluminum is very firm and has advanced during the week. The metals are all very sensitive and subject to sudden changes. It is quite evident that speculation has had a great deal to do with the remarkable advances that have taken place in some metals. The markets at present are a puzzle to the most experienced men in the trade and they all hesitate when asked to give opinions on the future of any of the metals. The whole trade is contending with a situation unparalleled in history. City business continues fair, while country trade in districts where agriculture is the chief industry appears to be almost normal. The weather recently has not been very seasonable and has had a bad effect on the sale of some lines of hot weather goods.

Montreal

MONTREAL, June 17. — The metals continue to monopolize interest in the hardware situation—with lead continuing its upward course and tin and copper strong, while spelter shows a tendency to react on futures, which helps the present situation but little; at the same time aluminum has come into the limelight and has made some rapid advances. The opinion of market experts seems to gain weight that the action of lead, a metal which enters to a small extent into the manufacture of war munitions, reveals the fact that the metal markets are being manipulated, and it is suggested that German interests are at work to handicap the munitions making operations of the allies.

The lead situation has affected the paint industry perhaps more than any other, the advances on white lead being followed by increases of from 10c to 20c the gallon for all varieties of mixed paints; other lead products have also been further advanced. Spelter shows a tendency to react, but Canadian manufacturers claim that there are no spot stocks available at any price, and for that reason they are being forced to close down their plants. Prices on sheets and other galvanized lines continue to advance. Copper products are very firm, with advances in effect for rivets and predicted for wares.

Business shows little change. Country demand is very fair and the city dull, with the main result that there are plenty of small sorting orders which do not make up the normal volume. Retailers evidently prefer to have the wholesalers and jobbers carry the stocks rather than go into the market and take a chance on advances; they are maintaining the hand-to-mouth policy and keeping their financing in narrow bounds. Altogether trade may be considered as fairly satisfactory under the conditions prevailing.

Tin.—The local market is steady and firm, with an upward tendency in sympathy with lead and other metals. London has been making big advances, but New York has not been affected to the same extent, the situation being at a standstill at writing after an advance of 2¼c during the early part of the week. Not only is there stagnation for wholesale lots, but the jobbing trade is extremely dull.

Spelter.—The reaction in the spelter market, which has been predicted for the past couple of weeks, since abnormally high price levels have been reached, has evidently commenced. However, locally, price reductions apply largely to futures. At the same time spot values are holding at such a level that the manufacture of galvanized ware is practically throttled, and plants are being shut down until values become normal and supplies are obtainable. New York reports the situation as being very unsettled. Bids are heard of 21c and 20c, as compared with 26c a week ago, but it is difficult to get a solid basis, as sellers are avoiding quotations, preferring to meet offers. It is noted that conditions are generally quiet in the market, which is a usual condition when prices are on the decline; this state of affairs is a contrast to the heavy buying which took

MONTREAL QUOTATIONS.

Tin	47c-48c
Spelter	29c-30c
Copper	21c
Lead	7¾c-8c
Antimony	40c
Solder, ½ x ½	27c-29c
Solder "strictly"	30c-32c
Aluminum, Ingot	23c lb.
Aluminum, Pattern	24c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	15½c base
British Manila Rope	13½c base
African Hemp	13½c
Siscal	10½c
Lath Yarn	9¾c

For quotations on other hardware goods see weekly report and current quotations.

place while the market ascended from 20c to 26c.

Lead.—The upward march has been continued by lead, the local quotation being advanced to 8¾c to 9c, which is a full cent over a week ago. The effect has been that the paint markets have been further disorganized, and there have been important advances in other metal products. New York for the week shows an increase of 1¼c, but at 7c—Trust price—there has been a reaction on profit-taking, which temporarily checked the upward movement. Altogether the lead market has had an experience during the past three weeks such as it has never had before, the advances amounting to 80 per cent. Reports that war business is back of the price movement are regarded as nothing less than nonsense, because the amount of lead used for munitions is not a great consideration and because the recent war orders have not been greater than during the previous five or six weeks. Another explanation that the increase is due to wider uses of lead with the higher values of spelter is met with the reply that lead sheets are still in the experimental state, and not as yet responsible for any considerable consumption. Above these is the argument that speculation is at the bottom of the developments, and it is hinted that the same clique has been operating as manipulated the spelter market. German interests are given credit, by those who advance this theory of manipulation, for booming prices to the disadvantage of the allies.

Copper.—The market is firm, with an upward tendency here on advances of 1c in New York during the early part of the week. New York latterly, however, has been much quieter, although prices are firm, particularly for futures. By those who believe that German interests have been manipulating the lead and spelter markets it is advanced that these interests have been dabbling in copper also, as there has been very heavy buying during the last past few weeks.

Antimony.—There is little change in the antimony situation, excepting that the shortage of European supplies naturally becomes more and more acute as the stocks become exhausted, with little or no prospect of replenishment. Prices are altogether nominal, with 40c heard as a basis. About the only guide for quotations is that New York reports Chinese and Japanese increased about 2c for the week, with no prices given for European supplies.

Aluminum.—Another of the metals has entered the price parade during the week. Aluminum has been comparatively quiet since the outbreak of the war, but the buying movement, after taking in practically everything else, has finally reached this metal, with the result that ingot aluminum has been advanced from 23c to 32c a pound and pattern aluminum from 24c to 31c.

Solder.—Solder is very firm on the advancing market for lead, and the high values prevailing for tin. Higher quotations are to be looked for. The prevailing prices are 27c to 29c for "half-and-half" and 30c to 32c for "strictly," with the tendency in each case towards the higher figure.

Sheet Zinc.—It is very difficult to give a price basis for sheet zinc; it is difficult to get supplies at any price. The quotation of 36c a week ago may be taken as a nominal figure, although as high as 40c has been heard.

Sheet Lead.—Another big advance has been made in the quotations for lead sheets, 75c being added to the recent gains of 75c and 50c. The following quotations are now in effect:

Sheets, 2½-lb. square foot	$9.50
Sheets, 3-lb. square foot	9.25
Sheets, 3½-lb. square foot	9.00
Sheets, 4-6-lbs. square foot	8.75

Lead Pipe and Fittings.—With the further advances in the lead market, additional increases for lead pipe are to be expected. The quotations of 9¾c for lead pipe and 10¾c for lead waste pipe are, therefore, very firm. Lead fittings are also likely to be further increased.

Galvanized Sheets.—The effect of the advancing values of spelter is emphasized in further material increases on galvanized sheets. The quotations are up $1 all round, and are now as follows:

Queen's Head and Gorbals Best Best—

16-20 gauge	$5.80
22-24	6.00
26	6.25
28	6.50

Fleur-de-Lis and Colborne Crown—

16-20 gauge	$5.55
22-24	5.80
26	6.05
28	6.30

Apollo—

14 gauge	$5.30
16	5.30
18-20	5.50
22-24	5.60
26	5.70
28	5.30
10¾ ozs.	5.50

Plates.—Plates are very firm, and further advances on galvanized varieties are in order. Tinned iron has been feeling the effects of the situation further, and the increase of 25c last week is followed by another of the same amount:

72 x 30 up to 24 gauge, case lots	$10.00
Less case advance 25c.	
72 x 30 up to 26 gauge, case lots	10.50
20 x 28 x 94	12.75

Galvanized Products. — Galvanized products in general are all firm on the advances recorded last week. The reaction reported in New York has not yet affected the situation here, and is not likely to for some time, and in the meantime there would appear to be more likelihood of advances than declines in the quotations for galvanized plates, sheets, pipe, wire, staples, etc.

Galvanized Ware.—Makers of galvanized ware report that they have been compelled to close their plants owing to the shortage of spelter. At present the price is prohibitive and supplies practically impossible to secure. The declining prices noted in New York indicate a better situation for futures, but it is believed that conditions will be relieved in Canada for a couple of months.

Copper Ware.—Copper ware is very firm, and it is predicted that at a meeting of manufacturers to be held in the near future there will be further advances in prices decided upon.

Builders' Hardware and Materials.—The demand for builders' hardware and materials continues very quiet, with little prospect of a revival this season. The new price lists on builders' hardware are still deferred by the unsettled conditions in the metal markets.

Batteries.—A further advance of 5c on batteries is recorded; there have been several such in the past few months. The higher prices are reported to be due to shortage of some of the materials entering into their manufacture.

Cutlery.—Demand for cutlery is not so good as during the earlier part of the month. Prices are very firm, especially on German goods, and one firm announces an increase of $2 a dozen on the Boker lines.

Copper Rivets.—The prices of copper rivets have been advanced in sympathy

TORONTO QUOTATIONS.

Tin	48c
Copper	21½c-22c
Spelter	30c
Lead	10c
Antimony	40c
Aluminum Ingot	30c
Aluminum Pattern	29c lb.
Solder, ½ x ½	29c lb.
Wire Solder	34c lb.
Wiping Solder	25c lb.
Tinker's Bar Solder	30c lb.
Wire Nails	$2.35 base
Cut Nails	$2.70 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp Rope	13½c base
Sisal Rope	10½c base

For quotations on other hardware lines see weekly report and current quotations.

with the copper market. Quotations are now: Copper rivets, usual proportion of burrs, 20 per cent.; burrs net.

Rope.—Important advances are announced in the rope prices owing to shortage of raw materials and difficulties of securing new stocks. Following are new quotations:

Pure Manila basis	16c
British Manila basis	13½c
African hemp basis	13½c
Sisal basis	10½c
Cotton rope 3-16 and larger	22c

Binder Twine.—The following quotations are given for binder twine:

650 feet, per lb.	14½c
600 feet, per lb.	11¼c
550 feet, per lb.	9½c
500 feet, per lb.	9c

Seasonable Lines.—A good demand is reported as continuing for lawn goods, being fostered undoubtedly by the recent dry spell. Harvest goods and general farm lines are moving well.

Stoves.—Although business in stoves continues comparatively quiet, one firm reports that some orders have been received during the week for kitchen cooks from country points, indicating more interest in this department than has been noted for several months.

Toronto

TORONTO, June 17.—The continued advance in the metal market is reflected in the number of price changes which have been made during the last two or three weeks. This emphasizes the close relation that exists between the hardware, metal and paint markets. Conditions in the market this week are very similar to those which prevailed last week and consequently there are a number of price changes to note. For the most part these are advances and the general condition of the market is not without interest. Spelter and lead are the metals showing the greatest activity although the former is now showing the greatest activity although the former is now showing a weaker tendency, which is probable only of a temporary nature. Notwithstanding this weakness, the spelter situation cannot be said to have changed to any marked degree and supplies are very scarce and the price still high. On this account higher prices are announced for galvanized sheets and brass wood screws. Lead is another which has advanced considerably of late and for this reason lead pipe has followed suit, this being the second price change in less than three weeks. Copper rivets and copper scrap are higher in consequence of the strength of the copper market. As anticipated in these columns, prices of Manila rope have advanced. The rope situation has been unsatisfactory for some time and the advance is the logical result of conditions prevailing.

The more seasonable weather during the week has stimulated trade, although the volume of business can hardly be said to be up to the normal. There is, however, a more hopeful feeling in business circles than the present conditions would warrant, due largely to the favorable crop outlook and benefits derived from orders for war equipment and supplies. Considering the time of the year, summer goods such as screen doors, ice cream freezers, refrigerators, oil stoves, etc., are moving slowly and a spell of warm weather would be welcomed by the trade. A fair business has been done in sporting goods and all kinds of garden tools; with these exceptions, the trade in the city is comparatively quiet. This is specially noticeable in the building trade which is very dull, and there is little movement in building material.

Metals.—The feature of the metal market is the sharp advance of lead which constitutes a record for this metal. The spelter situation is full of interest, although there is a weaker tendency in the market. With the exception of spelter, the markets are distinctly strong and in addition to lead, tin has also advanced. Copper and antimony are very firm and higher prices may be expected. The advance in tin has been followed by higher prices for all solders. A heavy demand continues for all those metals entering into the manufacture of munitions, but ordinary business is light with buying generally of a hand-to-mouth order.

Tin.—The market is active on heavy buying and interest in the market is being renewed. The London market has advanced, but New York is quiet, although the spot and June market is strong. Tin has advanced 3c locally and is quoted at 48c per pound.

Copper.—The London market is strong on heavy buying and has advanced. There is a continued heavy demand for copper, and indications point to a further increase in consumption. The copper position is stronger and higher prices seem probable. Quotations are firm but unchanged at 21½c to 22c per pound.

Spelter. — The market shows less strength than a week ago and is dull and unsettled. It has been suggested that the sensational rise in spelter is due to heavy buying on the part of certain interests with a view to hindering the manufacture of munitions. Locally, supplies of spelter are scarce, and the situation is unchanged. Quotations have declined 2c and are nominal at 30c per pound.

Lead.—The upward movement in lead continues; the reason for this is not very apparent, but is probably due to manipulation. There is, of course, considerable amount of lead used for munitions but if this had been the reason the price would have advanced months ago. There is an impression that the advance in lead is associated with that of spelter; in any case, however, it is obvious that it is the result of speculation. Lead has advanced locally 2c and is quoted at 10c per pound.

Antimony.—The market is strong and indications point to higher prices. The demand continues heavy and some brands are very scarce. Local quotations are unchanged, but very firm at 40c per pound.

Aluminum.—The market is firm and unchanged at 30c per pound.

Solders.—The advance in tin has been followed by higher prices for all solders ranging from 1c to 3c, according to grade. Prices for solders given in panel and current market quotations.

Rope Advances.—It was stated in these columns last week that higher prices for Manila rope were fully expected. This was based on a survey of the situation both as regards raw material market and high ocean freight rates. An advance of ½c is to be noted, the new quotations being, pure Manila 16c, British Manila 13½c, and African hemp 13½c per pound, basis. Drought in certain districts in the Philippine Islands has seriously affected the supply of Manila, while a shortage of tonnage and high ocean freight rates are also responsible for the increased prices. Conditions in the sisal market are somewhat improved and some shipments have been made from Mexico. Rope quotations all round are very firm and further advances are possible.

Lead Pipe Advances Again.—The continued advances in pig lead has made another change in lead pipe necessary, which makes the third advance in less than three weeks. The last advance to be noted is 1½c, and the new prices are: lead pipe 11¼c, waste pipe 12¼c, while the new discount for traps and bends is 25 per cent.

Scrap Metals.—The continued advance in the copper, zinc and lead markets has naturally affected scrap metals and higher prices for copper, brass, lead and zinc scrap are to be noted. Heavy copper has advanced ½c, brass 1c, tea lead 1½c, zinc 9c, No. 1 composition 1½c, and No. 1 composition turnings ½c per pound. There is an active demand for all the above, but iron and steel scrap are dull and prices unchanged. A complete list is given in the current market quotations.

Copper Rivets.—As predicted in Hardware and Metal last week an advance has been made in copper rivets, the new discount for copper rivets and usual pro-

portion of burrs being 20 per cent as against 27 per cent. formerly. Burrs only are now net list.

Wood Screws.—The advance predicted in these columns last week has materialized and the new discounts are as follows: Brass, flat head, 75 per cent.; brass, round head, 70 per cent.; bronze, flat head, 70 per cent.; bronze, round head, 65 per cent. Discounts on bright screws are unchanged. Complete list is given in the current market quotations.

Galvanized Sheets Advance.—Another advance in galvanized sheets has been made as predicted in Hardware and Metal last week. The most extraordinary situation in the spelter market continues and conditions in the trade are serious. The high cost of spelter precludes the possibility of making and selling galvanized sheets at a profit or even at cost. Sheets have advanced $1 per cwt.; prices are given in the current market quotations.

Bar Iron and Steel.—Prices are firm at $2.05 base but the market is quiet. There is little movement in merchant bars.

Pig Iron.—The situation is unchanged and business is dull. Foundries are very quiet and are operating at considerably reduced capacity. Hamilton and Victoria brands are unchanged at $19 per ton.

Wire Nails. — Fair business is being done in wire nails and quotations are firm at $2.35 base. Cut nails are quoted at $2.75 base.

Cutlery.—A further advance in some lines of cutlery has been made.

Kitchen Utensils.—A fair volume of business is reported in utensils and prices are holding very firm. Higher prices for galvanized and copper ware are anticipated on account of the high cost of spelter and copper.

London

LONDON, Ont., June 17.—A number of important price changes have taken place this week, following the changes announced in last week's issue. Business is very satisfactory. There is no big rush but a steady volume of trade is passing.

Under the heading of late price price changes last week it was announced that linseed oil had been reduced 2c per gallon; turpentine had been reduced 3c per gallon and Paris green had advanced 2c per pound. The prices now in effect are as follows:

Linseed Oil:

	Price per gallon. Raw.	Boiled.
1 to 2 bbl.	80	83
3 to 5 bbls.	79	82
6 to 9 bbls.	78	81

WINNIPEG QUOTATIONS.

Solder	29c-30c lb.
Linseed Oil, raw	95c gal.
Linseed Oil, boiled	98c gal.
Turpentine, in bbls.	80c
White Lead, ton	$11.50
Poultry Netting	50% off
Copper, plannished, per lb.	40c
Copper rivets, No. 7	$41.50-$42.00
Rope, Pure Manila	16c
Sheet Zinc	16c
Black Sheets, 10 and 12 gauge	$3.15
Appollo and Fleur de Lis	$5.75
Queen's Head	$6.00
Iron Pipe:	
Galvanized, 1 inch	$9.00
Black, 1 inch	$5.95
Lead Pipe:	
Coil	$8.25 less $9.25
Lead Waste	$8.75 per cwt.
Paris Green:	
1-lb. pkgs. (case lots	27½
	Sgle. Dble.
Up to 25 in.	$6.25 $9.00
Putty, 100 lb. drums	$3.25

Turpentine is now quoted as follows:

	Per Imp. gal.
1 bbl lots	65c
2 to 4 bbl. lots	64c
5-gal. lots	72c

Strictly pure Paris green is quoted as follows:

	Price per pound.
In barrels, about 660 lb.	22¼c
In Arsenic Kegs, 250 lb.	22½c
In 50 lb. and 100 lb. drums	23½c
In 25 lb. drums	23¾c
In 1 lb. packets, 100 lb. in case	24¾c
In ½ lb. pack's, 100 lb. in case	27¾c
In 1 lb. tins, 100 lb. in case	26¾c

Advance in Rope.—Rope has advanced two cents per pound and is now quoted as follows:

Pure Manila	16c lb. basis.
British Manila	13½c lb basis.
African Hemp	13½c lb basis.
Sisal	10½c lb. basis.

Advance in Galvanized Goods.—New and advanced prices have been issued on many lines of galvanized products, including fence staples, fence hooks, clothes line, fence wire, etc. The following prices are in effect on fence wire:

	Per 100 lbs.
Barb	$2.75
No. 9 Galvanized	2.50
No. 12 Galvanized	2.65
No. 13 Galvanized	2.75
No. 9 coil spring	2.55
No. 10 O and A	2.46
No. 11	2.52
No. 12	2.60

Galvanized clothes-line wire is quoted as follows: XX No. 19, $2.90 per 1000 ft.; XXX No. 18, $3.25 per 1000 ft.

Fence Hooks have advanced and are quoted in 100-lb. kegs at $3.60 per 100 lbs.; 25-lb. boxes at $3.85 per 100 lbs.

Galvanized and bright staples are now quoted as follows: Galvanized in 100-lb. kegs, $3.60 per 100 lbs.; 25-lb. boxes, $3.85 per 100 lbs.

Bright staples in 100-lb. kegs, $2.60 per 100 lbs.; 25-lb. boxes, $2.85 per 100 lbs.

Advance in Screws.—An advance has taken place in the price of brass and bronze screws. Bright screws remain unchanged and the discounts are as follows:

Flat Head Bright, 85-10-7½-10% off list.
Oval Head Bright, 80-10-7½-10% off list.
Round H'd Bright, 80-10-7½-10% off list.
Flat Head Brass .....75% off list.
Oval Head Brass .....70% off list.
Round Head Brass .....70% off list.
Flat Head Bronze .....70% off list.
Oval Head Bronze .....65% off list.
Round Head Bronze .....65% off list.
Flat Head tin'd and galv., 75-5% off list.
Round Head tin'dand galv., 72½-5% off list.

Copper Rivets Advance.—Solid copper rivets have advanced and are now quoted at 20 per cent. Burrs are quoted net list.

Other Changes.—Malleable fittings are now quoted at 35-5 per cent. Red lead, pure, is quoted at $10 per 100 lbs. Pure white lead in oil is now quoted at $10.60 per 100 lbs. in ton lots and $10.90 in less than ton lots.

Wire nails, harvest tools, screen wire, twine, poultry netting and other lines remain at last week's quotations.

Winnipeg

WINNIPEG, June 15.—Winnipeg and the West to-day watch with interest and high hope the western crop outlook. Present promises are excellent but should not cloud the reason. It is a long time yet to harvest. Much may happen between now and the time when all is threshed.

Western business is dull compared with the past half decade but there is much to encourage the man who stays. The worst is past. Liquidation has put all business on a rock bottom and the era of better times is at hand. "Better times" must not be translated into "boom." Business is however, really on a firm basis.

In hardware, builders' hardware is very dull and there are no big contracts or rush of building permits coming in to lead hardwaremen to expect a revival.

Summer stoves such as gasoline and kerosene cooking outfits have been quieter than anticipated. In fact sales of camp outfits generally have so far been a little disappointing. At the same time, the weather of the past ten days has been unusually cool for June and no doubt more seasonable weather will bring about brisker business.

White Lead Advances.—Since last review while lead here has had two advances of 75c per cwt., or $1.50 in all bringing the price up to $11.50 on all lots under 5 tons. Strength in lead and zinc will eventually react on paint lines. In this connection the very strong position of zinc products must not be ignored.

Linseed oil is for the moment steady but any symptoms of an industrial revival will put oils up. Whether the large stock of oil cake on hand which crushers are unable to market is a bullish or bearish factor is hard to say. It is certain that much capital is so tied up.

Barb Wire Scarce.—As intimated last week barb wire is scarce while the demand shows little falling off. There is an increasing demand for all kinds of woven wire fencing. The city demands have been up to expectations and country trade in these lines shows improvement.

Paris Green Advances.—Paris green is now quoted at 27½c in 1 lb. packages, and consumption of this commodity is likely to be heavy. Sprayers and mixtures have during the past two weeks been selling well.

Copper and Spelter.—Copper rivets are up approximately 10 per cent. The copper market generally is strong. With local shops busy in the manufacture of munitions as a factor in a world-wide demand for copper for the same purpose higher copper prices are inevitable.

In zinc spelter the situation is stronger than ever and notices for further advances in all lines of galvenized iron products are to hand. It is not possible to give quotations but galvanized plates, poultry netting, wire fencing, galvanized pipe, etc., are all steadily on the up grade.

COURSE FOR SHEET METAL WORKERS.

(Continued from page 46.)

E-F or F-G, or any of the sides of the plan (all being equal). Now set off on circumference of arc, repeating to complete the four sides of figure; draw lines joining these points, and also from each point to the centre F. The outline thus obtained will give pattern. If the article shown in Fig. 2 was an oblong, the method is the same other than in marking off the circumference; the long and short side must be marked off, as they would be shown in plan—that is, alternately.

Alexander Ramsay, president of the A. Ramsay & Sons, Montreal, was in Toronto for a few days this week on a business trip.

A Correction.

On the back cover of the May 8 issue of Hordware and Metal in the advertisement of Frank Mossberg Co., Attleboro, Mass., there appeared below the No. 14 socket wrench set the following: "Stock wrenches from $1.10 to $18.00." This should have head, "Socket wrenches from $1.10 to $18.00." In the same advertisement the Ford socket wrench set No. 30 is listed at $2.00. This should have read $4.00.

Branch of R. M. A. at Smith's Falls.

At a meeting held last week at Smith's Falls, Ont., a local branch of the R.M.A. was formed under the supervision of Eric C. Jamieson. The following officers were elected:

Pres., John Lewis, of Clark & Lewis (hardware); vice-president, A. B. Scott (general merchant); sec'y, W. S. Bell (jeweler); Executive—R. A. Van Lunen (general merchant); A. Leacock (hardware); Robt. Lucas, of Lucas & McCreary (grocers); R. W. Hawkins (hardware), W. H. Kerfoot (bookseller), G. H. Davison (ladies' wear), F. Montgomery (tailor).

Catalogues Wanted.

Hardware and Metal has received a letter from The Motor Car Equipment Co., 55 Warren street, New York, N.Y., stating that they are adding bicycle, motorcycle and motor boat accessories and equipment, and marine hardware, and invite manufacturers of the above lines to forward catalogues with discounts.

Conditions in the Paint Trade

Predicted Price Advances Have Taken Place—Ready-Mixed Paints Advanced This Week—The Future of Linseed Oil.

FOLLOWING repeated warnings through Hardware and Metal and by paint manufacturers, many developments have taken place in paint markets during the past few weeks. Last week Hardware and Metal's market reports indicated that white lead in oil had advanced $1.50 per 100 lbs., and from present indications it is altogether probable that a further advance will take place. As predicted in last week's issue of Hardware and Metal and in previous issues, an advance of twenty cents per gallon has taken place this week in the price of ready-mixed paints.

The war has forced new conditions upon the paint manufacturers and they have no power to stop them. Within two weeks' time pig lead advanced in price 50 per cent. Oxide of zinc, based on the present price of spelter, is over 300 per cent. higher than the price in effect before the war. The advances in these and other materials which are basis for mixed paints and wall finishes were bound to force up the price of ready-mixed paints and other paint products.

Quotations on some colors in oil have been seriously affected and in some cases withdrawn. Stocks of some dry colors are almost exhausted. Retail hardwaremen who have not protected themselves against high prices can only blame themselves, for repeated warnings in advance have been given in almost every instance before higher prices went into effect.

Recently, weakness has been shown in the flax market and in some places price declines have resulted. For some months past there has been considerable variation in the prices quoted by some jobbers of linseed oil. Several times the prices quoted in small lots by jobbers have been lower than the carload prices quoted by the crushers who gauge their prices to a great extent by the prevailing prices in the flax market. These jobbers bought oil many months ago when prices were very low and have had some of the low price oil on hand, thus enabling them to sell at lower prices than the jobbers who had to buy after the market had advanced. The Paint, Oil and Drug Review, in referring to linseed oil futures, states as follows:

"The recent break in flaxseed caused some inquiries for new crop linseed oil which developed the fact that summer deliveries of oil are being offered at more favorable prices than September-December contracts. This is due to two reasons—the value of July seed as compared with September-October options, coupled with the fact that cake cannot be sold for export this fall and winter within $3 or $4 per ton of what the crushers can get for the limited output of meal in the northwest during the next two or three months. With September seed selling at 3c or 4c more per bushel than cash seed, and September-December cake quoted at $3 or $4 per ton less than cash meal, crushers cannot make as low prices for fall and winter oil as for summer oil.

"Some few contracts have been placed during the past week for new

(Continued on page 54.)

Weekly Paint Markets

Montreal

MONTREAL, June 17.—An important general advance in the price of ready-mixed paint lines has been made by the manufacturers, following the rapid rise recorded in the lead and zinc markets. Taking effect on the 16th, the increases may be generally described as follows:

	Gallon.
House, floor and porch paints....	20c
Barn, bridge and roof paints ...	10c
Flat oil paints	15c

These three groups are an indication of the new basis adopted, and the many other lines which might be classified under these heads are similarly affected. It might be emphasized here that the increases which have been made do not cover the situation as it exists at the present time. Since the advance of $1.50 in white lead, upon which these changes were largely based, there have been further advances in that market, and it is stated in the trade that if the increases were made to properly indicate the market they would be nearer 40c than 20c the gallon.

The advancing lead market, the new high prices prevailing for zinc, and the weaker market for linseed oil are features of the week. Business is reported as continuing fairly satisfactory, with more interest being displayed in sorting orders as the result of depletion of spring purchases by good general consumption. That many people are doing their own painting is indicated in the brisk retail store demand.

Mixed Paints.—The decision of the makers to advance first-class paints 20c, second-class 10c, and flat tones 15c, came after a very unsettled period brought about by the unparalleled rise of the lead market. Even more radical price changes are said to be warranted by the present position. There has been no further discrimination as regards colors, the new increases being above the advances which went into effect on the 15th of April.

Linseed Oil.—Further declines are noted in the linseed oil market, although there appears to be difference of opinion as to whether the weakness has been caused by actual conditions in the flax market or by manipulation on the part of the speculative element. Crushers report that values are off about 2c from a week ago, and the fact that jobbers are not following the market down quite so quickly is a good sign for the welfare of the trade. During the rapid increases there were those who held the market back on account of cheap stocks on hand, with the result that competition became keener even than under normal conditions, and profits were cut to a very close margin. The following range now prevails, indicating reductions of about two cents:

	Raw.	Boiled.
1 to 2 barrels	78c-81c	81c-84c
3 to 5 barrels	77c-80c	80c-83c
6 to 9 barrels	76c-79c	79c-82c

Gasoline and Benzine.—The decline of ½c gallon on gasoline, noted a week ago, is not now effective on drums, there again being a spread as between drums and tank wagon. The former quotation is 14½c, as against 14c for the latter. Benzine is quoted at 14½c. Business is fair, but not so heavy as during the "spring-delivery" period of May.

Turpentine.—Weakness is indicated in the turpentine situation, the low quotation having been reduced by 2c. Refiners give the same price as for the past couple of weeks—64c—but jobbers who have been following the market down and reached that level last week have now gone below. The 62c quotation would indicate that some jobbers still have cheap stocks on hand. Following is the range:

	Per gal.
½-barrel lots	65c-68c
1-barrel lots	62c-65c
2 to 4 barrel lots	61c-64c
5 to 10-barrel lots	60c-63c

White Lead.—The two advances of 75c each made in the white lead market, as announced last week, do not by any means represent the rise that has taken place for this product. The present basis of $10.45, with 30c additional for less than ton lots, is likely to be sharply advanced again in the near future. The metal market quotations show that lead has gone up 1¼c in the past week, and almost 3c in less than a month.

Zinc in Oil.—There is practically no market for zinc. Such is the state of the market that for both dry and in oil the quotations have been altogether withdrawn and are only given from day to day—and order to order. At writing, quotations of both 30c and 40c were heard in the same hour, and there are reports of as high as 50c being asked. Each jobber quotes according to his stock on hand. The figures mentioned contrast with prices of about 14c before the recent upward movement commenced.

Red Lead.—Red lead has been advancing rapidly in sympathy with the market. In addition to the increases recorded in the quotations last week, further changes have been made to raise the figures about 50c. Red lead in large casks is now quoted at $9.75 and in 100-lb. kegs at $10.25.

Colors.—The lead situation has diverted attention from the colors for the time being, but the situation has not had any opportunity to improve—in fact, the shortage of certain imports naturally becomes more acute as time passes, and there is no promise of an early opportunity of replacing the rapidly exhausting stocks. An advance of 1c lb. on certain greens in oil is about the only change in quotations given this week.

Glass and Putty.—The glass situation is becoming better defined and much more steady in relation to the price basis. Putty continues firm on small demand, with advances in whiting being predicted.

Toronto

TORONTO, Ont., June 17. — The feature in the paint market this week has been the sharp advance in mixed paints. This was fully anticipated in these columns, as it was apparent that the old schedule could not be maintained after white lead and zinc had reached such a high level. The continued advance of pig lead has completely unsettled the market and another advance in white lead is anticipated. Red lead dry is even in a worse condition and that also is expected to advance further. The change in prices of mixed paints covers all brands and includes porch paints, barn paints, inside floor paints

Summer and Ingersolls

Hardware stores will find their Ingersoll watches selling best during the warm months.

Men will be laying aside their vests. Hundreds of thousands of them will also lay aside their jeweled watches and buy Ingersolls to slip in their coat pockets.

A Dollar Watch Eases the Mind

While away on vacations, on outings, or while indulging in Summer Sports, people want to be spared from worrying about a possible accident to their valuable watch. And they are willing to pay a dollar or two to be spared the worry. Just a suggestion will remind them that an Ingersoll is the watch for these summer uses.

The way to make that suggestion is to show up the watches in your window. A good window display of Ingersolls at this season, when they are so appropriate, will bring good substantial business, possibly more of it than anything else you have will bring at this time.

Robt. H. Ingersoll & Bro.

200 McGill Street Montreal, P. Q.

What This Trade-Mark Means—

It means satisfaction for your customers and profit for yourself. For every package bearing this mark is backed by the skill and knowledge resulting from 57 years of most successful varnish making.

Avail yourself of the sure protection afforded by this mark. Sell to your trade a varnish that has proven itself —by years of actual service —a product of sterling merit. Write for dealer proposition.

Walkerville, Ont.

(72)

and floor enamels, flat oil paints and shingle stains. Business continues good in the country districts but rather quiet in the city, although the warmer weather has had a beneficial effect. Collections are slow.

Linseed Oil.—The flaxseed market is quiet and oil quotations are at the same level as last week. There is little of interest to note in this market and business is quiet. The following prices are being quoted in Toronto:

	Raw.	Boiled.
Single barrels	.80	83
3 to 5 barrels	.79	82
6 to 9 barrels	.78	81

Turpentine.—The market is quiet, but firmer at Savannah. Production is less than last year, and stocks are light, which is having a tendency to make the market firm. The local demand is light and prices are unchanged. The following prices are being quoted in Toronto: Single barrels, 65c; 2 to 4 barrels, 64c, and 5-gallon lots, 72c, per Imperial gallon.

Mixed Paints Advance.—As was predicted in Hardware and Metal last week, prices of all mixed paints have advanced and quotations are now 20c per gallon higher. This 20c advance includes house and porch paints of all shades, also inside floor paints and enamels. Flat oil paints have advanced 15c a gallon and second grades are also 15c higher. The minimum price for barn paints has been raised from 90c to $1 per gallon, and 85c per gallon is the minimum for shingle stain.

These higher prices are the result principally of the recent sharp advance in lead and zinc and oil, although all raw materials are increasing in cost.

White Lead.—Lead is very firm at the sharp advances announced last week. If pig lead continues to advance another change in the lead schedule will be imperative. All quotations are subject to immediate acceptance and the booking date has been cancelled.

Red Lead.—An advance of 50c per cwt. has been announced and the market is very strong. The sharp advance in pig lead has unsettled the market and higher quotations for red lead are not improbable.

Colors in Oil.—Permanent greens in oil have advanced 1c per pound. All quotations are very firm and higher prices for some colors may be expected.

Glass.—Business continues dull with no prospects of any immediate improvement. No change has been made so far in the list. Although there is a possibility of something being done to improve conditions.

Whiting.—Supplies are scarce and high ocean freight rates are tending to further increase the price of whiting.

Putty.—The market is dull and featureless. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.50
Bulk drums, 100 lbs.	2.70
Bulk drums, 50 lbs.	2.75
Bulk drums, 25 lbs.	2.80
Bulk drums, 12½ lbs.	3.05
Cased tins, 25 lbs.	3.00
Cased tins, 12½ lbs.	3.20

CONDITIONS IN THE PAINT TRADE.

(Continued from page 51.)

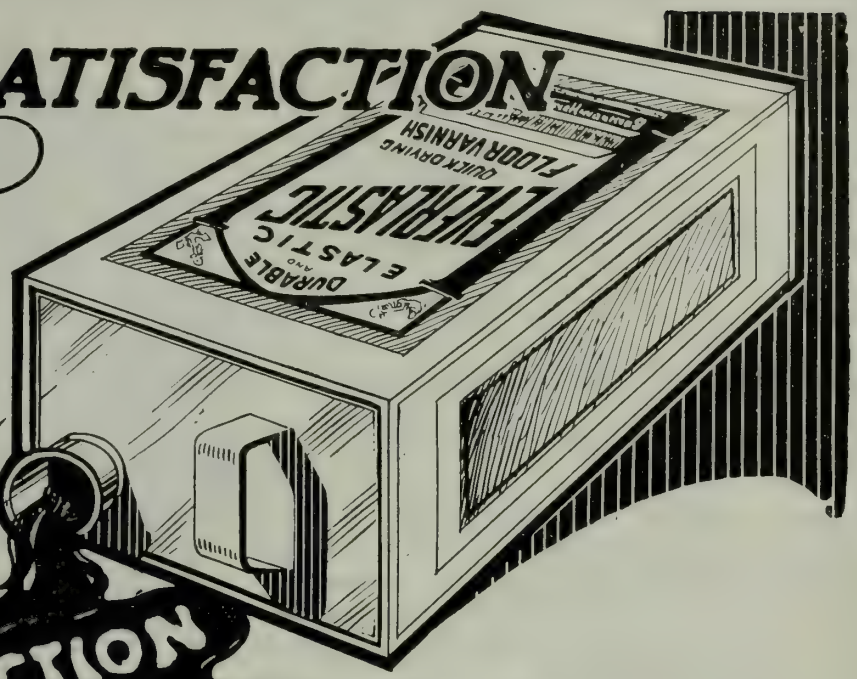
crop linseed oil. It would seem that buyers will make a mistake if they buy too freely at the present time, as some conditions seem to favor increased acreage and a warm summer with plenty of moisture in the ground. Furthermore, it is a long time ahead to speculate. On the other hand, there may be no extreme heat in the flax belt in July and August. These and other conditions make the buying of linseed oil now for delivery next September a very uncertain transaction.

"The flax acreage is showing some increase, as Northwestern farmers are taking advantage of the excellent condition of the soil to sow flaxseed because it is too late to plant other grains. Predictions are made that the crop by the end of June will present a fine appearance. It is probable with such a forecast becoming a reality the speculators may sell more seed at reduced prices, although here is presented the argument that both the speculator and the farmer will sell against the growing crop. Should seed go to $1.50 per bushel it would make linseed oil a good purchase.

"The only way to estimate the flax acreage is by averaging all the guesses of the railroad men, the elevator men and the so-called "crop experts." According to the talk on the boards of trade in the Northwest, the United States' acreage will be short from 20 to 30 per cent. In Canada the estimate of decrease is 40 to 50 per cent., but even with these reductions in acreage, with perfect weather we might have a larger crop than last year. Of course, good weather all through the summer could be offset with killing frosts and rain at harvest time.

"With a short 1914-1915 crop in both the United States and Canada, and little or no seed carried over into the new crop year, heavy imports from Argentine will again be necessary, and it is more than likely the acreage in that country sown to flaxseed will be reduced in favor of other grains which will yield the farmers larger profits."

NEGLECTING LAWN TOOL BUSINESS.



Continued from page 35.)

other lines. Four neat show cards were used. Why not run a good garden tool display next week—feature lawn tools in your advertisements, and talk lawn tools to customers. Put on a week's campaign on garden tools and see the results—more profits for you—satisfied and more progressive customers—and a more attractive town to live in. Get one or two people started in each block to fix up their lawns and homes, and they will soon have a large following, and you will soon have more customers buying goods that carry a nice profit.

THE CANADA METAL COMPANY, LIMITED

TORONTO MONTREAL WINNIPEG

The full line is a valuable asset to S-W Agents in securing the bulk of the paint and varnish business.

Successful merchandising depends on the volume of sales as well as on the quality of the goods. For this reason Sherwin-Williams Agents should lose no opportunity of introducing S-W products to their customers.

The uniform high quality of all Sherwin-Williams products is the key-stone that enables S-W Agents to build up a large and successful paint and varnish business. Satisfied customers come back when they have further requirements and they frequently recommend goods that have pleased them, to their friends.

The best advertisements for S-W products are the goods themselves—the sale of a can of Buggy Paint, Barn Red, or Floor Paint, etc., often results later on in a profitable order for SWP or Flat-Tone. Make permanent customers for your store by pushing the full line of Sherwin-Williams Paints and Varnishes.

Kalsomine and Whitewash Brushes

TRADE MARK KEYSTONE BRAND REGISTERED

That Bring and Hold Customers

A good brush is the first necessity for doing a good job—one that will flow the color smoothly, without streaks, and not shed bristles onto the surface.

Keystone Kalsomine Brushes are good enough to always bring a customer back for more—and now is the season to sell them. Are *you* stocked?

A quarter of a century's distribution of Foster Bros.' Brand of

BUTCHERS' CUTLERY

has accomplished world-wide prestige. The reputation of this line is due solely to those qualities of good service and durability that every user of CUTLERY seeks.

Cutlery for Hotel, Restaurant or Kitchen use in various shapes for various uses, forms part of this complete line. Every piece fully warranted. The blades are securely riveted to the handles and will not loosen.

The Foster Bros.' Brand Cutlery should be in every Canadian Hardware store. It is a profitable line to handle. It is used wherever good quality is essential.

Our illustrated catalogue will convince you. Write for a copy.

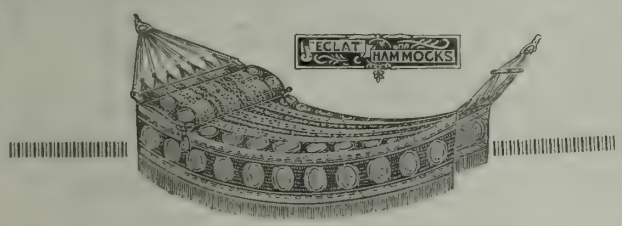
IN BLACK, BRONZE & GALVANIZED.

See That THIS MARK OF HIGH QUALITY Is On Every Roll

The Season for GARDEN WIRE-WORK is now here.



Garden Bordering and Trellises for Climbing Plants should be in demand.

We carry a complete stock.

Enquiries solicited.

Canada Wire & Iron Goods Co.

Hamilton, Ont.

The distinctive colorings and patterns, and price of

HOHLFELD HAMMOCKS

will help you make the most of your hammock department

Although better by far they cost no more than ordinary hammocks; and when you sell a Hohlfeld Hammock at any price you are giving the **best value possible** at that figure. The yarn used differs from that used in others. It brings out the design and colors and at the same time adds strength to the fabric.

And there are other good features. Drop us a line to-day for full information.

PROMPT SHIPMENT.

DRAW PROFITABLE BUSINESS

Every tire user has *trouble.* And so far as we can see, he always will have! But this trouble can be lessened. It can be cut down to one-tenth of what it is now. 90% eliminated. This: by using the "ADAMSON" Vulcanizer. Every tire user sees the logic in our principle — and BUYS SOMETIME, for it's economy to carry an outfit in every car. Are you going to gather in some of these dollars which the ADAMSON is attracting? They will come to your place of business — if you've "ADAMSON" outfits on your counter.

MODEL "U"—$3.00

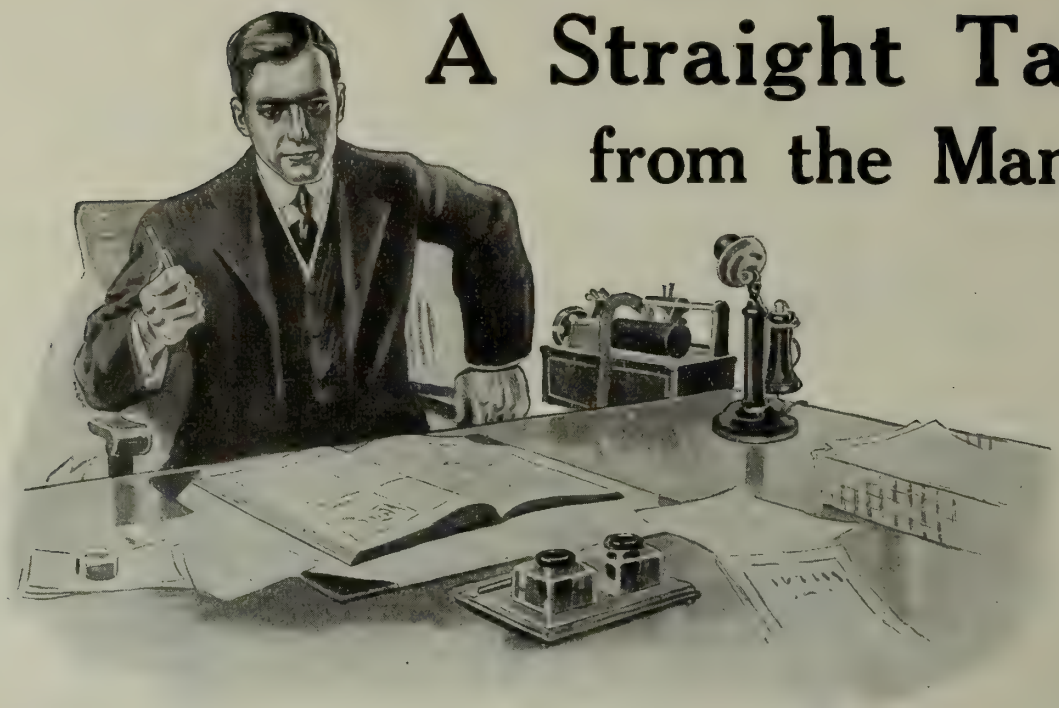
Value for Both Sides of Your Dollar

The art of spending money is a greater one than that of making it. Yet far more has been taught, written and lectured on the subject of the making of money than about the spending of it.



This doubtless inspired the old adage that a fool and his money are soon parted. To-day the world is too busy making money to stop and study the best ways of spending it.

Price is not the same as Value; for Price is what you pay for an article, while Value is what you receive in Merchandise—plus—Service.

Many years ago we began studying the ways to make both sides of our Customers' dollars represent Value to them when spent with us, and to-day it is recognized that our Merchandising represents Value.

Daily our efforts are toward making a bigger and better organization to back up our policy, and while to-day we are giving the best we know how, to-morrow we hope to make it better.

MILLER-MORSE HARDWARE CO LIMITED
"THE BIG WINNIPEG HOUSE"

A Straight Talk from the Manager

It Pays To Know

THE other day an Ontario hardware merchant was fined $10 for selling a revolver to a customer who had not secured the necessary permit.

That hardwareman is a respected citizen. He had no more intention of breaking the law than you or I. But either he, or his clerk who made the sale, *did not know* that the law required anyone buying a revolver to first secure a permit. And so the dealer's profits for the month will be $10 less—not counting legal expenses.

Now, the Act governing the sale of firearms has been published in full by Hardware and Metal two or three times, and subscribers who make it a point to study each week's issue of their trade paper will pay no $10 fines because they did not know.

This incident is just another concrete example of how it pays, in real money, to study Hardware and Metal—news and advertising pages alike.

J. G. L.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

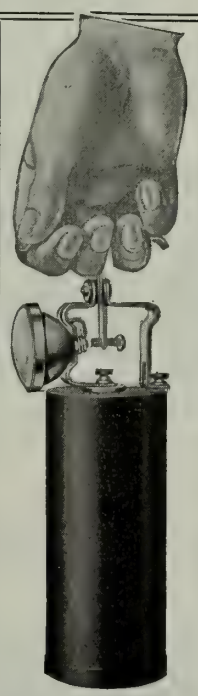
ESTIMATING. BY EDWARD NICHOLS. Architect. 128 pp., 22 illus. Cloth binding. Containing invaluable information for the use of Architects, Contractors, Builders, Plumbers and Heaters, Painters, Roofers, Cornice-Makers, and other workers in the building trades. This handbook tells just how to go about the task of making an estimate intelligently. Price, postage paid, $1.00. MacLean Publishing Co., Ltd., 143-53 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10, postage paid. MacLean Pub. Co., 143 University Ave., Toronto.



HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Lovers of Things Canadian

will find a wealth of interesting information on national Canadian affairs and interesting facts about prominent Canadian characters, Canadian enterprise, and the value of our country's national resources, in each issue of

MacLean's Magazine

The editorial contents of July MacLean's will include the following features:

An article on the Building Situation in Canada, showing that the present is a good time to build from an economic as well as a patriotic standpoint.

"Our Mountain Heritage" is the title of an article on the value of the Rocky Mountains from a national standpoint by Prof. Sissons. It will be illustrated by some particularly fine views in the Rockies.

H. F. Gadsby will contribute an article on William Findlay Maclean, of the Toronto World.

An article on Efficiency, outlining some of the steps which have been taken by Canadian firms to improve their methods and their output. This article was arranged for last month, but had to be held over.

"Masterfulness and Physical Vigor" is the title of Dr. Marden's article.

Biographical articles will appear by E. J. Dennis, of Calgary, the Irrigation expert, and Mrs. Nellie McClung, of Edmonton, who played a big part in the downfall of the Roblin Government in Manitoba.

A short article on the greatest fishing section of Canada, the Temagami, will appear.

The fiction will include instalments of the two serials and short stories by Alan Sullivan, L. M. Montgomery, and a war story by Mrs. Cuthbert, who manages the Cuthbert tours in Europe. Mrs. Cuthbert is a new writer but a very promising one.

Get your July copy from your newsdealer.

20 Cents a Copy. **$2.00 a Year.**

A Gallon of Ice Cream in Three Minutes

is one of the strong selling points of the

DANA PEERLESS FREEZER

as it is the quickest time of any freezer made, and its ease of operation and economy in ice are other good ones.

Not an experiment. Manufactured and sold for over 40 years in U.S.A., and for two years in Canada without a complaint from anybody.

The "Dana" is sure to make the **most** of your freezer business.

Order now. We ship quickly.

Made in Canada.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

"AYLMER" Force Pumps
They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.
Aylmer Pump and Scale Company, Limited
Aylmer, Ont., Canada

LABELS THAT SPEAK VOLUMES
Courtesy is the Keynote of Successful Business. You cannot work the smile and handshake in your correspondence or bills. But with these courtesy labels you can continue pleasant relations and keep yourself in minds of others. Our courtesy labels are megaphones of courtesy—1000 $2.
Send 50 cts. in stamps or coin for sample package (assorted) Best Business Builders by Mail.

M. S. PIERCE & CO., 39-41 Britain St., Toronto

LEADER FLOOR SCRAPERS
are exceptionally well balanced, and their entire weight of 135 lbs. can be thrown on the blade by slightly raising the handle. The wheels are equipped with heavy rubber tires, ensuring your floors from scratches, and they are set flush with body of machine, enabling you to get close to walls and corners.

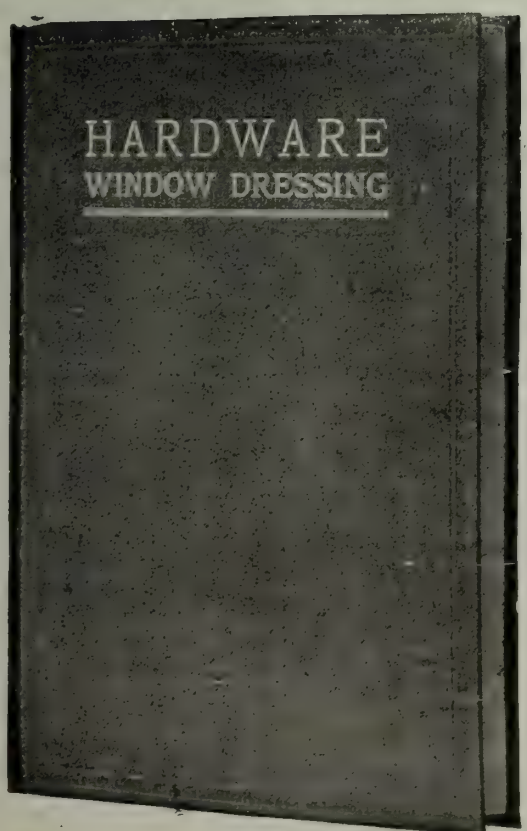
THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.



THE MASTER INTERLOCKING SLIDE RULE

3 ft. sample sent post-paid to any dealer for 60c.

The only rule giving instantaneous reading for **inside** as well as **outside** measurement. Sells to carpenters and machinists on sight—in 2, 3, 4, 5, 6, 7 and 8-ft. lengths. Be sure to see this rule before stocking up.

SAUNDERS AND WAINWRIGHT, ST. NICHOLAS BUILDING, MONTREAL.

You May Become a Practical Window Dresser for $2.60

This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense — any one of them will bring enough extra trade to the store to pay for the book many times.

256 Pages 8x11 Inches 300 Illustrations

A Business Convention With A Spice of Good Fellowship

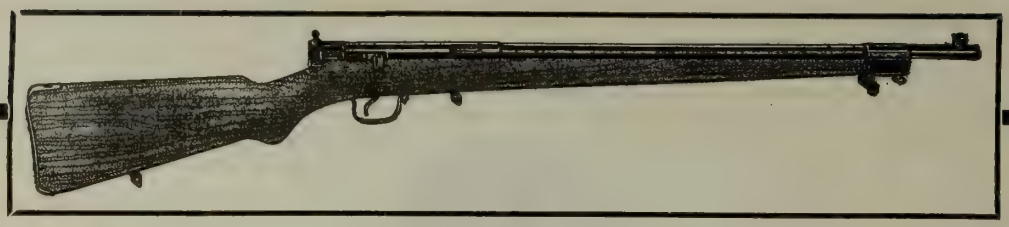
The Associated Advertising Clubs of the World will hold their Eleventh Annual Convention in Chicago from June 20 to 24

The distribution problems of the fields represented by this publication and other trade and technical journals will receive particular attention.

This convention will surpass those of previous years in size, in thoroughness, in scope and in results. The great war has broken down walls and built new ones. It has rearranged existing markets and has created new ones. The problem constantly before every wide-awake business man is, "How can I meet new conditions: how can I profit by them?"

These questions will be discussed from every one of their thousand and one angles by some of the brainiest merchandising men in the country. They will be analyzed in the broad sense in the general discussions and in detail in each of the various departmental meetings.

The convention won't be all work and no play. The lighter side of life, social frivolity, won't be neglected, but won't be overworked. Good fellowship and a spirit of jovial comradery have always been an important part of our conventions.



There will be entertainments, shows, pageants, receptions, auto drives, lake trips, and luncheons and shopping visits to the famous State Street shops for the ladies. Bring your wife, daughters and sisters. The programme has been arranged so that visitors can combine education with recreation.

President Wilson, conditions permitting, will head a notable array of speakers. Hon. W. J. Bryan, John Fahey, Henry Watterson, George Horace Lorimer and Arthur Brisbane will be among the others heard.

Remember the date—June 20-24, the place—Chicago, and be there.

For special information, address the Convention Bureau, Advertising Building, 123 Madison St., Chicago.

Ross Rifle Company, - Quebec, Que.

BUFFALO

Ideal Threshers' Oil

is the most satisfactory oil obtainable for use on bearings of ALL kinds of farm machinery.
Is a straight mineral oil, dark red in color, heavy, but not too heavy to occasion loss of power, or to prevent free flowing.
Is not affected by moisture, or climatic changes, and age will not impair its unequalled lubricating properties.
Is possessed of a very low, cold test, so that it does its work in the cool of the morning equally as well as in the heat of the day.
You will make no mistake in recommending your customers to use Buffalo Ideal Threshers' Oil.

Prairie City Oil Co., Limited
WINNIPEG, MAN.

Handle your Oils and Gasoline with the

Wayne Pump

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness.

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

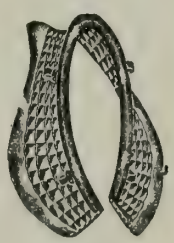
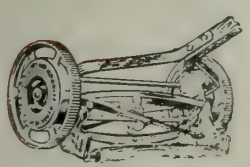
Your Customers Have the Money to Satisfy Their Needs

The Bank Statement for April shows that deposits in Canadian banks increased $29,205,845, as compared with April, 1914.

It is a fact that the Canadian people to-day have vastly more money in the banks than at any other time in history. That money should be put into circulation and you can help by convincing your public that they should buy more hardware.



Use the cuts supplied by Hardware and Metal's Electro Service and you will give a definite pulling power to your local advertising. These cuts will attract more attention from more people and help you to make more sales.



Our assortment includes 219 staple hardware articles. All cuts are mounted on wood, and sell for 15 cents each.

Write to-day for our free "proof sheets of small hardware electros."

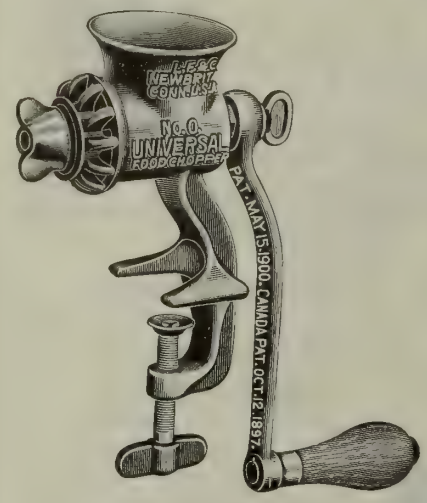
THE carpenter, the farmer, the man of the house, the housewife—they all find that there is nothing harder, sharper, faster cutting than Carborundum—nothing so genuinely efficient in making every edge tool a sharp tool.—You can sell Carborundum stones, strops, hones, knife sharpeners and grinders to anyone who has tools to sharpen—and nearly everyone has.

It's Profitable to be a Carborundum Dealer

Send for catalog, trade helps, display material, etc.

THE CARBORUNDUM COMPANY
NIAGARA FALLS, N. Y.

UNIVERSAL

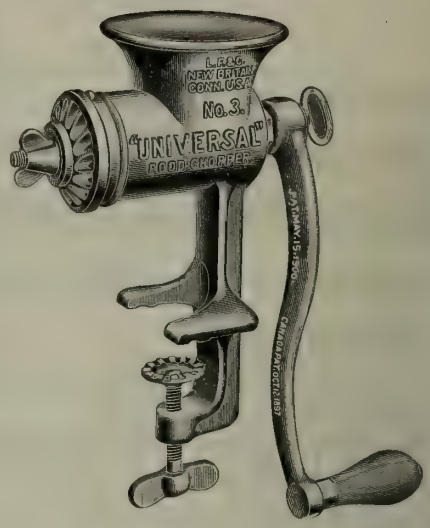


Food Choppers

Are profitable to handle and easy to sell. The constantly increasing demand for the UNIVERSAL is due to its well-known points of superiority—its self-sharpening, shear-cutting beveled cutters—its strength and superior construction.

Fifteen years of consistent advertising has made UNIVERSAL Food Choppers known to housekeepers everywhere. It has become the standard chopper.

UNIVERSAL Food Choppers are made in four sizes, which allows a choice accommodating any style of housework, from the small family kitchen to the large hotel.



Each chopper is of the highest quality material and is heavily tinned, giving it a bright, clean appearance, which appeals to any purchaser.

No. 0

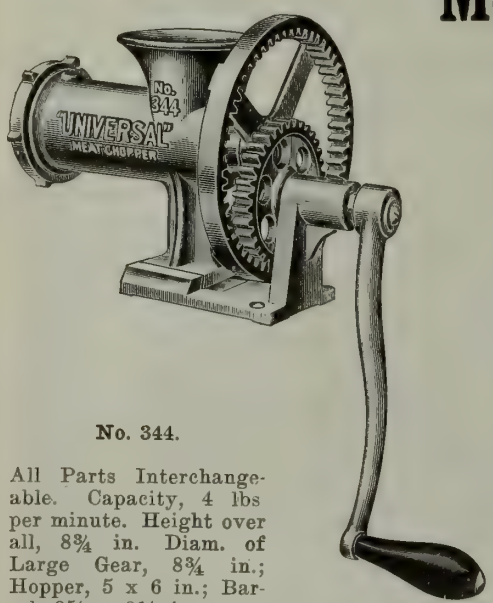
Smaller than, but capacity equal to, any imitations of No. 1. Tinned. All Parts Interchangeable. Coarse, medium and fine cutters. Capacity, 1½ lbs. per minute. Height over all, 8 in. Diameter of Hopper, 2⅝ x 2¾ in. Diameter of Barrel, 1¾ in.

Per dozen - - - - $21.60

No. 3

Especially adapted for hotel and market use. Tinned. All Parts Interchangeable. Four cutters, very coarse to very fine. Capacity, 3 lbs. per minute. Height over all, 11 in. Diameter of Hopper, 4 x 4⅞ in. Diameter of Barrel, 2½ in. (Stuffing attachment will fit this chopper.)

Per dozen - - - - $36.00



UNIVERSAL

Meat Choppers

Like UNIVERSAL Food Choppers the quality of the castings, knives and plates as well as the machinery and trimming is the best.

Each chopper is made with thumb screw or clamp, making it easily removable from bench or block. The cranks are larger than in other makes, giving greater leverage and requiring less work.

Knives and plates are of fine quality cast steel, uniformly ground and machined. The knives are hollow ground, cutting cleanly and retaining their edge longer than other makes.

No. 344.

All Parts Interchangeable. Capacity, 4 lbs per minute. Height over all, 8¾ in. Diam. of Large Gear, 8¾ in.; Hopper, 5 x 6 in.; Barrel, 2⅝ x 3¼ in.

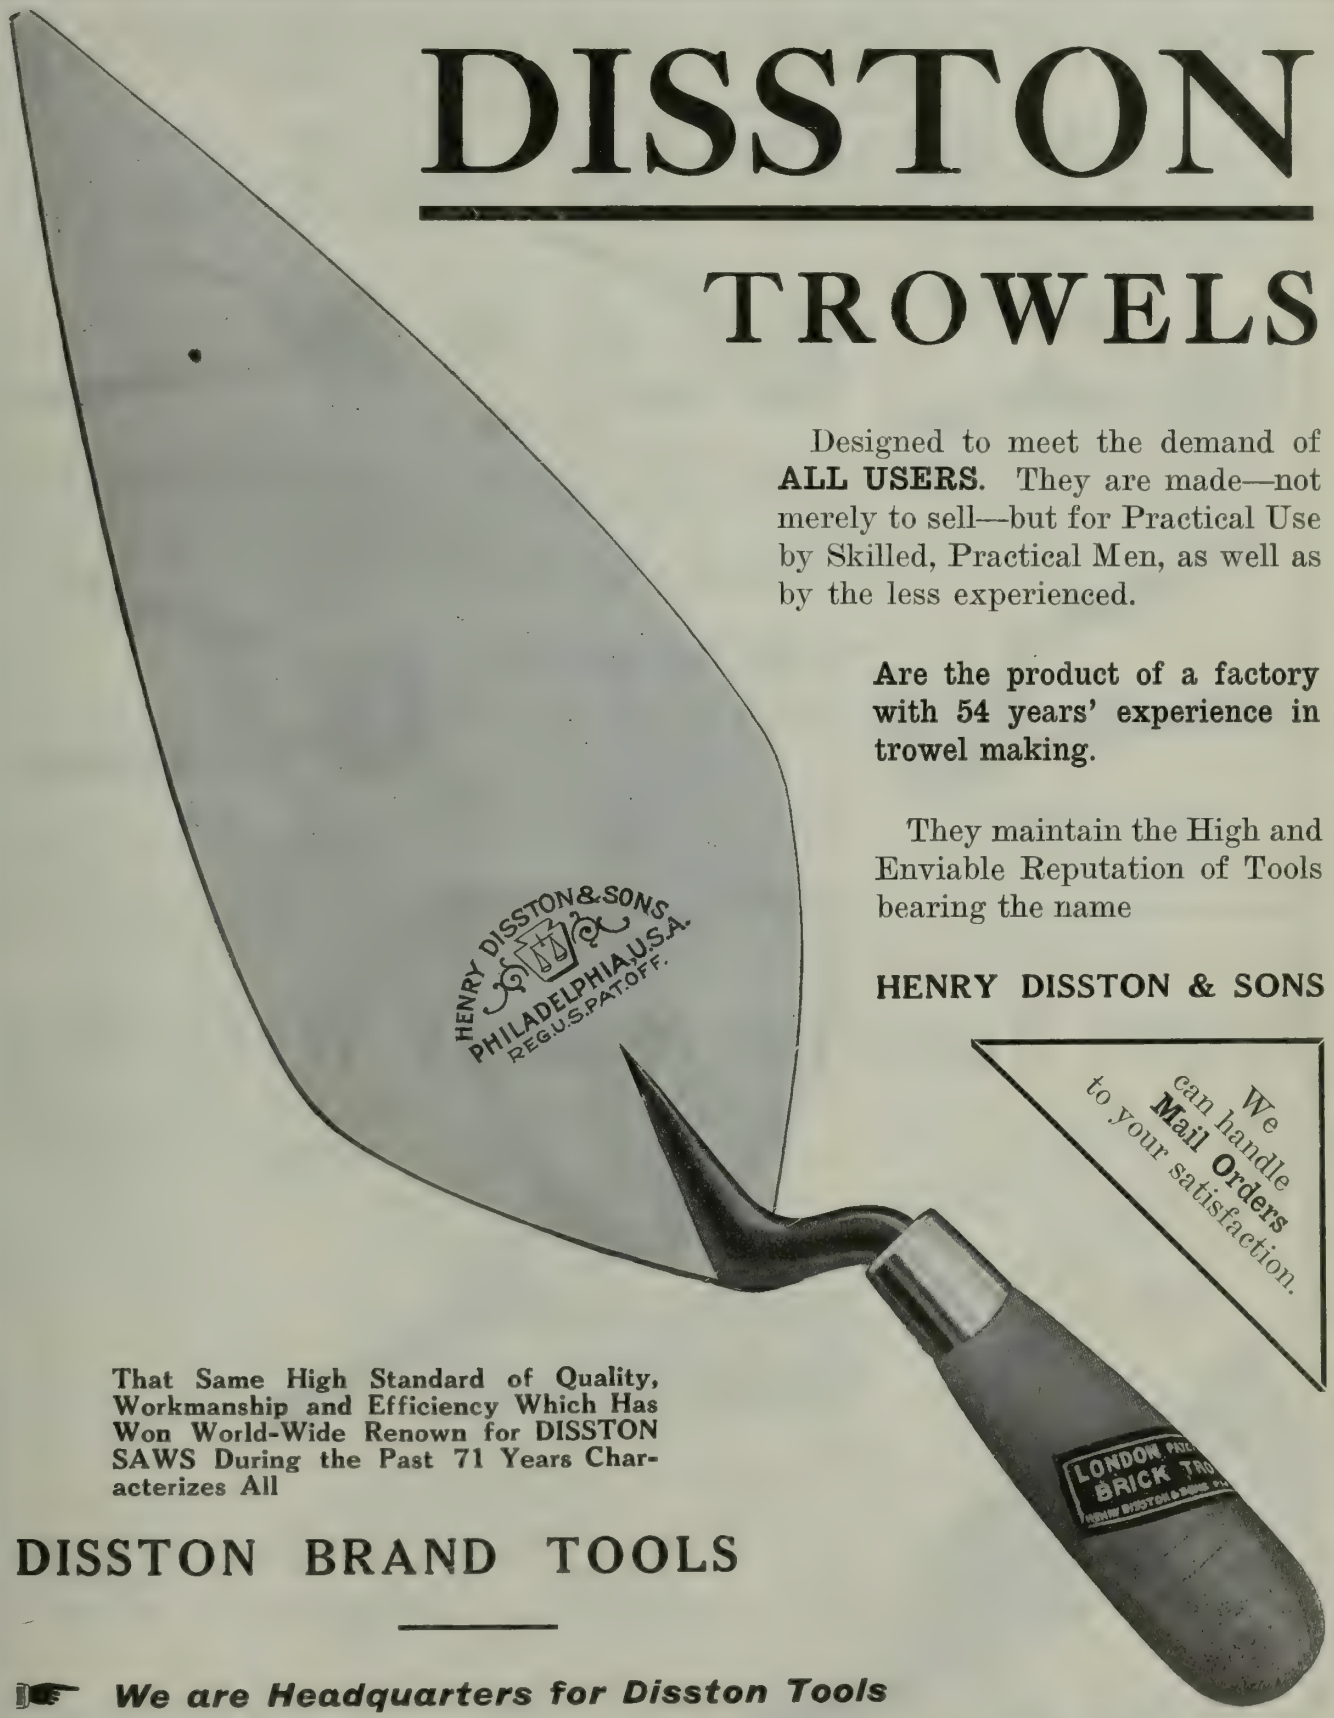
Each - - - $7.00

With Geared Attachment. We strongly recommend the geared patterns as being the most easily operated Meat Choppers on the market.

No. 354.

Largest of the clamp Meat Choppers. All Parts Interchangeable. Capacity, 4 lbs. per minute. Height over all, 15½ in. Diameter of Hopper, 5 x 6 in.; Barrel, 2⅝ x 3¼ in.

Each - - - - - $5.00



For prices, etc., write to your jobber or direct to us.

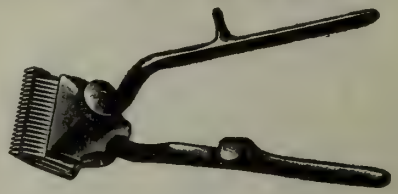
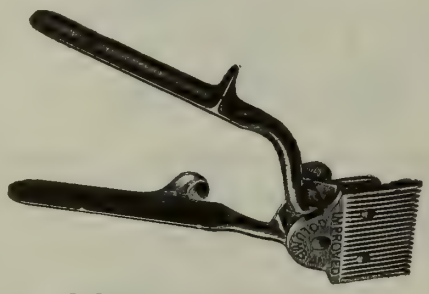
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.



present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1, and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

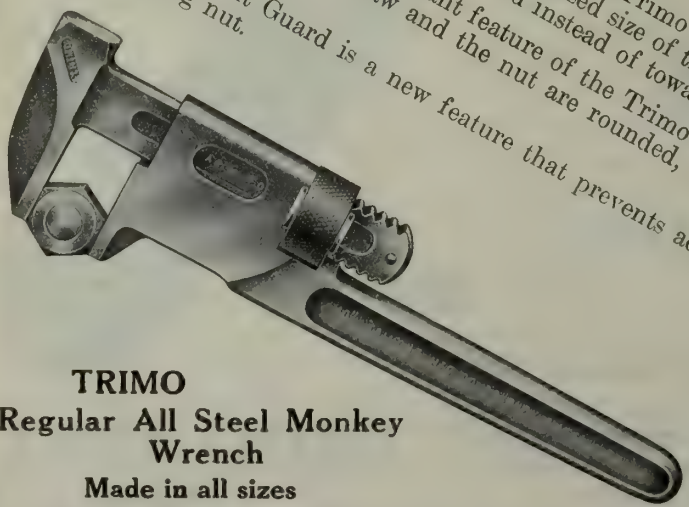
Trimo Superior Monkey Wrenches

THE ALL STEEL AUTO MONKEY WRENCH



Made narrow, in 12-inch size only.

Unlike most monkey wrenches, the Trimo is so constructed that the leverage increases in proportion to the increased size of the nut to which it is applied, as the movable jaw extends forward instead of towards the handle to adjust.

Another very important feature of the Trimo Monkey Wrench is that the threads of both the jaw and the nut are rounded, rendering them practically indestructible.

The Nut Guard is a new feature that prevents accidental rotation of the adjusting nut.

TRIMO
Regular All Steel Monkey Wrench
Made in all sizes
6-inch to 21-inch inclusive

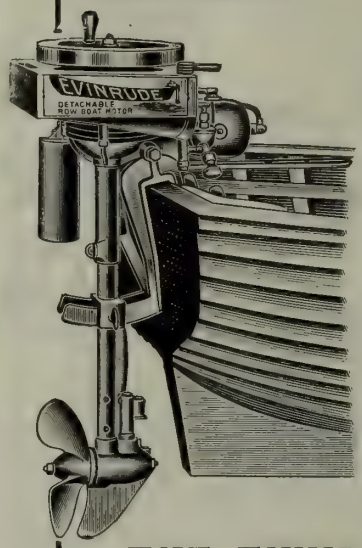
Your Opportunity

To Make Extra Profits



This Season

If there is any boating in or near your town you can profit by being the local agent for

Evinrude Motors

We are conducting an extensive advertising campaign in the following Canadian Publications:

Toronto Saturday Night **Canadian Magazine**
MacLean's Magazine **Rod & Gun**
Canada Monthly **Motor Magazine**

In addition to this advertising a large campaign is being carried in e

Saturday Evening Post

and other U. S. Periodicals, circulating generally throughout Canada. This advertising will greatly increase the demand for

THE EVINRUDE MOTOR

Every inquiry from your territory will be promptly turned over to you. We will mail personal letters and catalogues to prospects whose names you send us, requesting them to call upon ***you***—our Local Agent.

We will furnish you with "exclusive agents" window display cards. They make sales. It will be easy to sell Evinrude Motors with the help we give you, and you can fill your orders promptly, because these motors are carried in stock by our

CANADIAN DISTRIBUTORS.

There will be only one Evinrude agent in your town. Will you be that one? If so, write for particulars.

MELCHIOR, ARMSTRONG & DESSAU
Broad & Water Sts. **New York City**

DAVIDSON'S
Premier Royal Cast Range

There is no uncertainty as to the lasting qualities of this range.

A Premier Royal will last a lifetime.

All that is best in a cast range. In material, construction, and baking qualifications it can not be excelled.

The Fire Box is correctly proportioned, the duplex pattern of grate is used. The fire box for wood is large and roomy with an extra large fire door. Very easy to change from coal to wood or vice versa. No tools are required.

A single damper controls both fire and oven. This damper is adjusted by a sliding knob on top of the stove. Note this special feature. It is not necessary to have the heat either all "on" or all "off" the oven as in the old way.

The nickel bands are all removable. They are heavily nickel-plated and the semi-plain castings of the range make it most attractive.

PREMIER ROYAL

With Reservoir and Steel High Closet.

For Coal or Wood.

THE PREMIER ROYAL is made in three sizes and seven styles. The very moderate price at which the dealer can sell this stove ensures an easy sale.
The name "Premier" on a stove or range is an absolute guarantee of Durability and Efficiency.

Write to-day for our illustrated stove catalogue.

Time to Order

FREEZERS

Whether you stock the LIGHTNING, GEM or BLIZZARD, you get a Freezer that has made good for more than a quarter of a century—one that has won its way into the hearts of the housekeepers by service that satisfies—backed by quality that creates confidence in both merchant and manufacturer—one that's well advertised and in demand—one that brings trade and helps you keep it.

The BLIZZARD, being a low-priced Freezer, makes a good running mate with either the GEM or LIGHTNING. Now is the time to place your order. Shipment can be made any time you specify.

BE SURE to INCLUDE the LIGHTNING ICE CHIPPER No. 1. You can sell one with every Freezer. It chips a block of ice into small uniform pieces in a jiffy, just right to pack closely around the can and shorten the time of freezing. So much easier to make Ice Cream. They help the sale of Freezers.

Your Jobber will Supply You.

NORTH BROS. MFG. CO.

PHILADELPHIA, PA.

See These Two Features?

They'll Boost Your Hack Saw Sales

The true mechanic will soon realize that here, at last, is a Hack Saw that's **different.** For it has two distinctive features—a positive pistol grip and a full stroke. Such perfect control is not possible in any other saw, nor will any other saw work in such close quarters.

MILLERS FALLS

STAR HACK SAW No. 1027

The "Pistol Grip" fits **any** hand without crowding and fits the **whole** hand. The handle is vulcanized in one piece around a strong steel rib which extends the full length and is bolted to the upper part of the frame. It has the **hang** that lends firmness to the stroke.

The thumb screw for tightening blades is placed at the inner end of saw so it offers no obstruction and permits the maximum stroke at all times. Frame may be adjusted to blades from 8 to 12 inches—the strong sheath at the back keeping it rigid at all lengths. Blades may be faced in four directions. Depth between frame and blade is 3½ inches.

Millers Falls Tools Build Up Demand

Feature this Hack Saw and it will soon become a ready seller. You should also carry in stock Hand Drill 1980, Breast Drill 200, Extension Bit Holder 6, Bench Drill 210 and the Acme Improved Mitre Box—all lines backed by the Millers Falls standards that bring satisfaction. Send for complete catalog if you haven't one already.

Hardware and Metal's Electro Service

AT the request of many of our readers and in order to assist Canadian hardwaremen in such a manner as to make it easy for them to use illustrations of staple hardware lines in their newspaper, circular or catalogue advertising. Hardware and Metal's editorial department has instituted a new service, viz., the supplying of electros of staple hardware lines at a reasonable price. Many merchants claim that the electros they have on hand are of such large proportions and occupy such large space that their use is almost prohibitive on account of the cost of newspaper space. By using small electros of seasonable goods the merchants will be able to feature several lines in one advertisement at a very reasonable cost. Hardware and Metal will from time to time publish seasonable advertising suggestions in which electros here shown will be used. In ordering electros be sure and order by numbers. Price of electros shown on this page is 15c each. Cash with order. Address all orders to Hardware and Metal, 143-153 University Ave., Toronto, Ont. Series No. 1.

REMINGTON UMC

HARDWARE AND METAL

Vol. XXVII. JUNE 26, 1915 No. 26

Regulations Governing Sales

For the Benefit of Canadian Hardware Retailers and as a Result of Many Enquiries, Hardware and Metal Gives a Complete Summary of the Law Governing the Sale of Stock Foods, Paris Green, Wood Alcohol and Fire-Arms, Etc.

IT is quite evident from the number of inquiries being received at the office of Hardware and Metal that there are many retail hardware merchants who have forgotten, or are not acquainted with the provisions of the law governing the sale of certain hardware products. Many inquirers continue to ask about the war tax on stock foods. All provisions of the war tax, which went into effect on April 15, appeared in Hardware and Metal when the announcement of the tax was first made public by the Finance Minister at Ottawa.

For the benefit of those who are not thoroughly conversant with the provisions of the tax, Hardware and Metal would, therefore, remind readers that stock foods, if medicated, and other articles, such as animal regulators, lice killers, heave cure, etc., must have war tax stamps of the requisite value mentioned in the schedule of the Act affixed to each package by the dealer, and cancelled at or before the time of sale to the consumer. Thus it will be necessary for the dealer to attach stamps equivalent to 4 per cent. of the selling price of the goods—a dollar package of medicated stock food would require stamps to the value of four cents—a twenty-five cent package requires a one cent stamp.

A penalty is provided for those not complying with the provisions of the Act. Another case brought to light a few weeks ago was that of a Toronto hardware merchant, whose store is located in the suburbs, refusing to sell Paris green because he was of the opinion that a license was necessary before a hardware merchant could sell Paris green.

Regarding the sale of Paris green, the pharmacy acts of the various provinces are much alike and may be summed up as follows: "Nothing in the Act shall prevent the sale, by persons not registered, of Paris green, hellebore, tincture of iodine, arsenate of lead, carbolic acid not exceeding a five per cent. solution, and London purple, if such articles are sold in WELL SECURED PACKAGES DISTINCTLY LABELED WITH THE NAME AND ADDRESS OF THE PERSON PREPARING OR PUTTING UP SUCH PACKAGES AND DISTINCTLY LABELED WITH THE NAME OF THE ARTICLE AND MARKED "POISON." When sold by retail, then also the name of the proprietor of the establishment in which the poison is sold.

On account of recent prosecutions, one in West Toronto, some hardware merchants are in doubt as to what procedure should be followed in selling wood alcohol.

All provinces in Canada come under the Inland Revenue Act, as far as the sale of wood alcohol is concerned. Section 266 of the Act states that, "Every person who uses spirits containing methyl alcohol in any form in any pharmaceutical or medicinal preparations for internal use, shall be liable to a penalty of five hundred dollars." This section of the Act has been amended by adding the following sub-section thereto: "Every person who uses methyl alcohol, or spirits containing methyl alcohol, in any form, in any pharmaceutical, medicinal or other preparation for external use shall affix to the vessel containing the said preparation a label stating in BLACK LETTERS NOT LESS THAN ONE-FOURTH OF AN INCH IN HEIGHTH, the presence of methyl alcohol therein, and every person violating the provisions of this subsection shall incur a penalty not less than fifty dollars and not exceeding two hundred dollars.

Hardwaremen should note particularly the following from section 10: "All vessels containing the word alcohol, whether in the possession of the manufacturer or other person, shall have affixed thereto a label bearing the words 'Wood alcohol Poison,' in black letters not less than one-fourth of an inch in height. Any person who holds in possession, sells, exchanges or delivers any wood alcohol contrary to the provisions of this section shall incur a penalty not less than fifty dollars and not exceeding five hundred dollars." In Prince Edward Island wood alcohol comes under the Prohibition Act.

Still further uneasiness has been caused by the recent prosecution of a retail hardware merchant, who sold a revolver without following the procedure demanded by law. For the benefit of the trade the regulations governing the sale of arms and ammunition in Canada are here appended:

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

1. This Act may be cited as The Criminal Code Amendment Act, 1913.

2. The Criminal Code, chapter 146 of the Revised Statutes, 1906, is amended as hereinafter set forth.

3. Paragraph (26) of section 2 is repealed and the following is substituted therefor:—

"(26) 'peace officer' includes a mayor, warden, reeve, sheriff, deputy sheriff, sheriff's officer, and justice of the peace, and also the warden, deputy warden, instructor, keeper, guard, or any other officer or permanent employee of a penitentiary and the jailer or keeper of any prison and any police officer, police constable, bailiff, constable or other person employed for the preservation and maintenance of the public peace or for the service or execution of civil process."

Dangerous Weapons Penalty.

4. Section 118 is repealed, and the following is substituted therefor:—

"118. Every one is guilty of an offence and liable, on summary conviction,

(Continued on page 41.)

Far-Reaching Effects

Showing How an Article Which Originated in the Office of Hardware and Metal Has Been Copied and Re-Copied—Used by a Large Jobbing House, Stove Manufacturer, a Contemporary and Others.

IN the January 9 issue of Hardware and Metal—almost six months ago—there appeared an article entitled, "Did the Mail Order House Ever Do This?" The article told how a retail hardware merchant was losing the stove trade in his town on account of mail order competition. In the same article the writer told how the merchant could offset mail order competition, and suggested arguments that could be used effectively in combating the efforts of the mail order houses. Accompanying the article, set in a panel—an exact reproduction of which appears on this page—were seventeen arguments, and the suggestion was made that retailers use the arguments every time they had occasion to compete with the mail order houses. The whole article was prepared in the office of Hardware and Metal, and accompanied by the matter in the panel reproduced here, appeared for the first time in this paper on January 9, 1915. When the article was first published, much favorable comment was heard regarding it.

But there is another feature in connection with the article that should be brought to the attention of the readers of Hardware and Metal, in order to demonstrate once more the far-reaching effects of a trade paper that devotes its efforts to securing matter that is of practical value to the whole trade.

Following the original appearance of the accompanying panel in Hardware and Metal, the matter contained therein was used in dozens of newspaper advertisements by retail hardware merchants throughout Canada, who at that season were advertising stoves.

A few weeks later a prominent Western Canada jobbing house issued an attractive and decidedly novel catalogue, the purpose of which was to help the retailer in fighting mail order competition. In this catalogue the panel, and its contents, was given a very prominent position.

The panel was next heard of down in Eastern Canada, where a large stove manufacturing firm set it up in circular form, and sent a copy of the circular to customers with the following offer: "Can you use some copies of the following circular to advantage among the people in your section? If so, let us know how many and what you would like filled in at the foot, when we will have pleasure in preparing and sending them along as soon as ready. Let us hear from you promptly if you wish them."

The most recent appearance of the panel, however, is in the June issue of a Canadian contemporary where the panel and contents are again reproduced with the same wording as appeared in Hardware and Metal nearly six months ago, and which was prepared by a Hardware and Metal editor. And the end is not yet. It will continue to be used by many other papers.

This is only one instance of many that could be quoted to demonstrate the far-reaching effects of Hardware and Metal, and the editors of Hardware and Metal are not slow to realize that when their productions are copied and re-copied in the same manner as the accompanying panel and contents, they are producing material that is benefiting the whole trade throughout the Dominion.

DID THE MAIL ORDER HOUSE EVER DO THIS?

DID you ever hear of a Mail Order House setting up a stove in a customer's home?

DO YOU know that it is often a matter of weeks before the mail order house makes delivery?

DO YOU know that the mail order stove often arrives in a broken condition, thus necessitating much red tape with railway officials and a great loss of time—often when the stove is most needed.

DO YOU have a look at a mail order stove before you buy it?

IF THE mail order stove becomes rusted or badly marked in transit who shines it?

DO YOU see a mail order stove before you send your money?

IF THE mail order stove proves defective, who do you have to appeal to?—A mail order house many hundreds of miles away.

WHO UNCRATES and unpacks the mail order stove, puts the parts together, fits the joints and tests the stove to see if it is in perfect working condition?

WHAT DO you do when you want repairs for a mail order stove?

CAN A mail order house render on-the-spot service?

WHO FITS the pipes for the mail order stove?

DOES THE mail order house haul the stove from the station, sign for the stove in good condition, unpack it, mount it and see that it is free from defects before it is delivered to you?

DOES THE mail order house help to build up your community?

DOES THE mail order house contribute to the support of local schools, churches, and public institutions?

DOES THE mail order house employ any of your fellow-townsmen and thus enable them to support their families.

DOES THE mail order house buy anything from the other merchants of the town?

IF YOU want to buy a stove, ask yourself the above questions and then come down to our store and let us talk it over with you.

Reproduction of panel, prepared by a Hardware and Metal Editor, appeared in Jan. 9, 1915, issue of Hardware and Metal and has been copied and re-copied several times. For details see accompanying article.

Selling Tools by Window Displays

A Traveller's Observations—How Windows are Neglected in One Store—Results Many Weeks After Display Has Appeared—How to Make a Good Background for a Tool Display.

By a Hardware Traveler.

I WAS talking to a hardware merchant in a fair sized city in Ontario the other day, and in the course of our conversation we drifted on to the subject of window trimming and the results obtained from displays. The merchant stated that he had secured good results from his windows, but this was when things were better than they are now.

I was curious to know just why he should talk that way, so I put the question to him, "How often do you change your window?" "Oh, about every two or three weeks," was his reply.

"Who does the window trimming?" was my next shot. He replied, "The young lad over there," indicating a boy about 15 or 16 years of age behind the nail counter. He said that this boy always dressed the windows because the other fellows in the store didn't care for that kind of work.

This state of affairs exists in a few stores. The windows are being neglected because some of the boys are afraid and don't care to tackle the job. It is left to the younger and inexperienced lad to look after.

Windows are, or should be, among the chief business pullers in every store. Especially at this time when business is so unsettled and merchants are wondering how the coming month and succeeding months will pan out, the show windows should have all possible attention.

The merchant told me that he only had success with his windows when times were good. Well now, has he used his windows as he should, since times are not so good?

This is the very time that show windows are making money, for a good many merchants.

I have found in my experience that a good tool window is as interesting to the average man on the street, as the movie show is to the little boy.

When I was in the retail business myself I always noticed in dressing tool windows that the class of men you can pull your way with window displays are spenders.

Take mechanics or chauffeurs for instance. They receive a fairly good salary and are always ready to buy a tool that will help them become more efficient in their work.

Not only are these men interested in tool windows, but so are carpenters, bricklayers, plumbers and the handy man around the house. These men are always on the look out for good tools and as the show window is the place where they would likely see a new tool for the first time, it is natural that they should look to the show windows for anything new to them. Perhaps the average man would not be prepared to make the purchase of a certain tool just at the time of your display, but you would be surprised at the business that will come to your store long after the window display has appeared.

I have had certain displays referred to many week after they appeared. Perhaps an instance that happened in our store some years ago would illustrate more fully what I mean.

A young mechanic came into the store one day and asked the price of a set of "feelers." He mentioned the position they occupied in a window display that had appeared some time previously. Feelers are what we call thickness gauges, but we didn't tumble to what he

(Continued on page 37.)

A Good Tool Display is Always Seasonable.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVII. TORONTO, JUNE 26, 1915 No. 26

A CLEAN PLATE-GLASS is an added attraction to the passing possible customer.

• • •

A STRIKING example of the growing importance of the rural population is found in the fact that of the nine million telephones in the Bell system, one-quarter of them are rural.

* * *

RETAIL MERCHANTS are doing a larger proportion of cash business at the present time than they have been accustomed to for many years—and business on a cash basis should be encouraged as much as possible.

* * *

MOTOR TRUCKS may not always prove "delivery de luxe," but scores of hardwaremen are finding their delivery difficulties solved by the introduction of trucks, and a large number of retail hardwaremen have added motor trucks during the past few months.

• • •

TIME WAS when people avoided a new article because it was new; now they are more likely to buy because it possesses the advantage of being new. This *volte face* on the part of the purchasing public has made a big difference in buying methods.

* * *

STUDY THE methods of the Mail Order houses; of the big department stores, and adopt every one that looks good to you. It will help you fight them more successfully and more permanently than any action that may be construed—and resented—by the public as a "restriction of trade."

• • •

NO CULT will ever be found to take the place of the school of experience. *The big things of the world are not done on blackboards.* Experience is the thing that gives us poise, power, personality—the thing that writes into our being that peculiar indefinable something that inspires confidence in other men.

* * *

THIS YEAR—1915—of all years in Canada's history, the farmer is king. Increased acreage, intensive cultivation, waiting markets, and record prices, all point to unequalled prosperity for the agriculturists of this country. They themselves are at last beginning to realize this fact, and so are a great many wide-awake retailers who are looking for new and steady markets.

• • •

ORDERS FOR war material are still being placed, but, in many cases, manufacturers are hesitating because of the growing scarcity of trained men. Quite a number who have been employed steadily in Canada for some years are now leaving to accept positions in the United Kingdom. The result is that responsible contractors hesitate to obligate themselves to deliver munitions in given quantities when inducements are offered their men to leave for Britain.

The Lead Market

SINCE last week's market reports, quotations on pig lead have declined considerably and the market is very much unsettled. Following the remarkable advance in the price of pig lead, referred to in Hardware and Metal's market reports at various times during the past few weeks, quotations on shot, sheet lead, lead fittings, white lead and a host of other lines were advanced several times within a comparatively short space of time—in fact in some instances it was claimed that some of the advances were not justified when present stocks and business conditions are considered. Of course, the fact must not be overlooked that these are war-times and at such times there are always serious disturbances with sudden advances and declines. The speculative element is rife in many quarters and even the best men in the metal trades do not feel safe in making predictions as to futures. The American Metal Market in referring to recent developments in lead, states as follows:—

"The lead market is in a state of complete demoralization, and it is difficult to keep track of the declines. Sellers are in a panic, and buyers appear to be completely at sea in regard to the probable course of the market, and are holding off, giving an added weakness to the situation. The unprecedented price reductions by the Trust have astounded the trade, and there are many theories being advanced to account for the sudden decline in prices. One theory is that the heavy price reduction in lead is one of the moves of the Trust interests in their fight to secure control of the St. Joe Lead Company. Others hint that the suit brought by Attorney-General Barker of Missouri against the lead and spelter interests has brought about the decline, but all of the theorists overlook the fact that it was generally admitted before the break came that prices were on a fictitious basis, and that they were entirely out of line, making it certain that the drop must come soon. It is said that the Trust interests while holding up quotations, and making the independents afraid to sell, were quietly unloading their surplus at cut prices, and also succeeded in disposing of a large part of their output for some time to come at good prices. With

the break in prices, the demand for lead has suddenly disappeared, and with the weakness at London, little export business is looked for. There appears to be some re-selling. Receipts at this point for the week were unusually large as they were considerably in excess of those for the preceding week, and nearly twice as large as the shipments, and also nearly twice as large as the receipts for the corresponding week a year ago. The shipments were also large, being much heavier than those for the preceding week and more than twice as large as those for the corresponding week a year ago."

This is a time for the buyer to beware and repeated warnings have been given regarding the lead and spelter situation.

Inquiry Department

ELSEWHERE in this issue an article appears giving the provisions of the law governing the sale of certain products sold in hardware stores. These regulations have all appeared in Hardware and Metal at various times during the past two years. During the past few weeks so many inquiries have reached the office of Hardware and Metal asking for particulars regarding the various "Acts" that we decided to publish them again. It is interesting to note that many of the inquirers are men who have started in business within the past year and they naturally look to their trade paper for information of this kind. Hardware and Metal is always glad to receive enquiries from readers on any subject pertaining to the hardware business. The inquiry department is always ready to obtain information for readers. In the course of a year many hundreds of inquiries reach the office of Hardware and Metal. Some of the inquiries are published under the well-known heading: "Hardware Letter-Box." A great many inquiries are answered direct by mail. Readers of this paper can secure assistance from the Editorial Department of Hardware and Metal at any time. Do not hesitate to write to us.

Spelter Abroad

WHILE American metal authorities state that the rise in the markets—particularly lead—has been due to manipulation on the part of certain interests, presumably German, it must not be overlooked that there have been outside influences which have had a broad effect, particularly in relation to spelter. England got her supply of spelter from the continent; this supply was cut off and she had to turn to America at a time when there was a big demand and increased consumption on both sides of the Atlantic. The British viewpoint may be judged from the following from the London "Iron Trades Review":—

"Many of our important industries are very adversely affected by the difficulty of obtaining supplies and the high prices of spelter. At the beginning of June last year the price was £21 10s per ton: this week it is £100, consequently the brass, Muntz metal and galvanized sheet trades are affected in a manner never before experienced.

"Until now the low price of Continental spelter excluded American spelter from this country, but the breaking out of the war completely cut off our Continental supply. The Government at once realized the importance of the situation and placed an embargo not alone on the export of spelter, but also upon the export of galvanized sheets. Prices shot upwards. American supplies were soon brought in and the position was eased, but the increased demand affected American prices, and, as in this country, spelter dependent trades are now adversely affected by scarcity and price. The need of spelter for war munitions in both countries is first met; other industries have to do the best they can, and the result is serious to the brass trades. The galvanized sheet trade is seriously hit, after a remarkable growth in recent years. The exports of galvanized sheets in 1908 were 390,000 tons, while in 1913 they amounted to 762,000 tons, thus nearly doubling in five years."

Big Work for the Retailer.

WHILE figures have not been given out as to the amount of business done in the mail order departments of large catalog houses in Canada, there are some interesting figures from Chicago on the past year's trade of Sears, Roebuck & Co. This concern declared a regular quarterly dividend on the preferred stock, and at the same time, issue a statement of sales showing that the business has increased tremendously in spite of the war affecting purchases. Sales made through the mails in May totalled $8,464,713 which was an increase of $912,402 over the corresponding month of a year ago.

This gain which is equal to 12.08 per cent. is the second largest of the current year, having been exceeded by March when an increase of 14 per cent. was reported. Analysis of the report indicates that the largest increases in sales were made in Western farming and industrial communities, otherwise the general returns were normal. Sales this year up to the end of May, totalled $45,415,693 which was a net increase of more than $3,600,000 over a year ago or a gain in percentage of 8.63.

These figures show that the average sales per month of this big mail order house are approximately $9,080,000 or an increase of about $721,000 a month over last year. Taken on the average this would indicate a yearly turnover of about $109,000,000 for this catalog house.

Reports received by Hardware and Metal indicate that the mail order departments of the Canadian catalog houses had a splendid year in 1914 and no doubt, if we could get the figures for the first five months of this year, they would be astonishing as well as these that come from Chicago. What is the retail dealer doing about this? Why should so much money be sent from outside communities, impoverishing them greatly, to be localized in the big centres? While the retailer of course is not to be blamed for all of this, he certainly could prevent a great deal of this business going to the mail order houses. What appears to be needed is more co-operation between merchants and farmers, so that the latter's wants will be better understood. One retailer can do nothing. If everyone of the thousands of retailers in the country, started out with the endeavor to study his customers carefully, to determine their wants, their likes and dislikes, and succeeded in keeping $500 or a $1,000 each year of this money that goes to the mail order houses in their home town, the mail order houses would very soon be feeling the pinch. Every merchant should make a detailed analysis of his own situation and endeavor to do his share.

How Hardware Goods Are Made

Fifth of a Series Showing How Hardware Goods are Made—Describing the Processes of Manufacture in Making a Galvanized Garbage Pail—Roughly a Dozen Processes—Care Taken to Remove Impurities.

BY A HARDWARE AND METAL REPRESENTATIVE.

FROM the plain sheet of iron to the galvanized garbage pail you may buy in a hardware store is a matter of roughly a dozen processes. In a visit I paid to the factory of the Sheet Metal Products Company at Toronto, I had an opportunity of seeing these processes, and of learning that an infinite deal of pains and much expert knowledge is necessary to produce even such an ordinary hardware article as a garbage pail.

The processes which go to make-up the total operation may themselves be divided summarily into two sections; the first is the making and shaping of the pail; the second is the galvanizing and finishing of the pail.

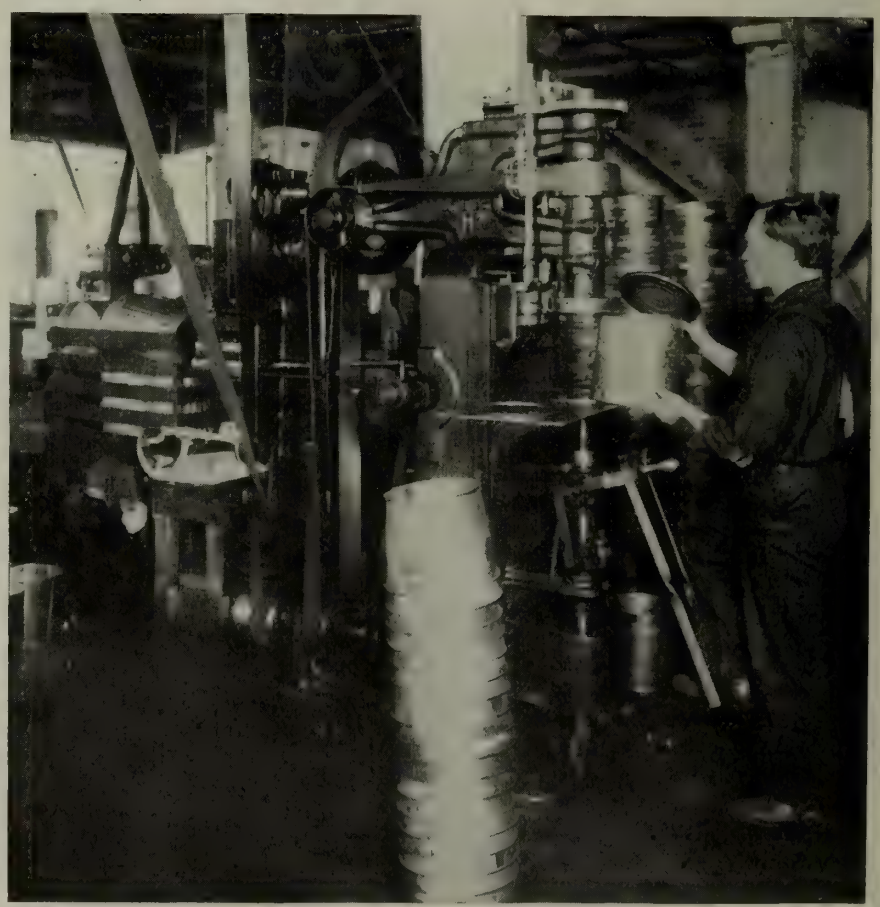
The first process is known as blanking. The operator takes a sheet of iron or steel and puts it through a pressing and cutting machine which cuts out the two sheets which go to make up the pail. These sections are then folded. They are put into a machine which turns the edges up then folds them over. The sheets are then rolled, turning them from flat sheets into curved, the curve on each sheet representing one side of the pail.

The grooving press then takes the two sections—each of which is now curved to the shape it will assume when made up into the finished article—and unites them by grooving and inter-locking the one with the other. This obviously has to be done on both ends of each section so that the object produced then represents the shaped pail, open, of course, at either end.

The next process is wiring. The shaped metal is put into a wiring press; a circular wire rod is placed on the end which is to be wired, and a punch descends, pressing the overlapping metal round the wire ring, all the way round the top.

The bottom edge is then flanged out or burred. I think that is the name, which leaves a ridge so that the bottom of the pail will be snug.

All is ready now for the inclusion of the bottom of the pail. So far we have been dealing with the skeleton pail, open at both ends. The bottom, which has been cut and stamped separately—two operations performed in one—is then placed on the top of the pail and welded into one with it. The bottom and sides are rolled very tightly together so that the edge of the bottom piece fits tightly into the ridge which has been made by the flanging or burring operation.



The pail is now completely made up, but for the ears and handle or bail. These have to be riveted on. The process of making the handle is a very simple one, and is a hand process. The steel rod is shaped semi-circularly, and is crooked at both ends to fit into the "ears."

The pail is now made. It now remains to make it the finished galvanized article.

From the black goods room it is passed into the pickling room. Here are the pickling pots, long baths containing acids. These acids differ according to the manufacturer. Some use muriatic, some sulphuric; some a mixture, but the formulæ are regarded as trade secrets. The pickling process prepares the surface of the pail for the adhesion of the zinc which follows later, and removes all impurities which may have gathered in the different processes up to now. I was struck by the fact that as much care is taken to remove these impurities—although the article being manufactured was only a garbage pail—as if it were a case of silverware.

The pail is now taken into the galvanizing room proper. This is a room which contains crucibles ofenormous size. The first operation in this room is to pass the pail through the fluxing box, which is filled with a solution of sal ammoniac. This is contained in one of the crucibles, which is connected by a channel with a crucible containing the spelter, or molten zinc, solution. The practice is to lower the pail down into the first crucible, and then straight into the second, where the spelter is. The sal ammoniac solution is kept at the same heat as the spelter itself.

The actual galvanizing operation is a

Placing bottoms on pails.

Inserting wire band on rim of pail.

ticklish one. The man who is galvanizing takes the pail on a rod and lowers it into the molten spelter, allowing it to stay there for a moment or two. Meanwhile, with the other hand he is perpetually stirring the surface, so that it may be kept clean, and no oxidizing can take place on the pail. After the pail has been soaked for a moment or two it is lifted out, and set down carefully on a stone, a bright, glittering thing.

There is method in the way in which the pail is allowed to stand. It is so placed, when it comes out from the spelter, that the metal runs into all the seams. All the spelter possible thus adheres to the pail, and it becomes completely watertight.

As the pail, second by second, gets cooler a wonderful transformation takes place. The bright and shingling metal crystalizes and spangles as it gets cooler and cooler, and the result is the spangled appearance that the pail has when it is bought in the store. It is fascinating to watch this spangling process. With it ends the making of a garbage pail.

As to the price of the garbage pail, while it is more or less standard, it depends primarily upon the market price of spelter, which naturally fluctuates according to conditions. It is noteworthy that a pail of the kind which we have described is considerably cheaper in England than it is in this country. Over there few are galvanized. They are just left a dull dark grey, and consequently save the expense of galvanizing. Possibly we are more attracted by a clean-looking and bright thing in this country. Certainly, a housewife would not want to buy a pail which was just a dull sort of grey color.

SELLING TOOLS BY WINDOW DISPLAY.

(Continued from page 31.)

wanted until a catalogue was produced.

I knew that I had had mechanics' fine tools displayed in the section of the window that he described, but I didn't know the tool as a feeler.

The feeler was procured and a sale made, and this was probably four or five weeks after the display. He mentioned to me at the time he made the purchase, that he didn't have the price when the display appeared, but had made up his mind to have that tool as soon as he could afford it. That is just one instance of the value of window displays, and probably there are many others, only we do not always have them brought to our notice quite as forcibly as this case.

A good tool display is interesting both to the mechanic and the window trimmer. I always took great pleasure in putting up a window display of tools. A good tool display takes a little more time than some displays but when finished there is a feeling of satisfaction when you see men around the window discussing the uses of the various tools.

Tools that are new to the best mechanic sometimes make their first appearance to him in the show window, and very often he will make his way into the store and find out more about the tool.

How to Arrange Displays.

With the aid of wall board some very effective tool trims can be made. An automatic drill to punch holes in the wall board is very useful, and much better than an awl, as the awl when it is forced through the wall board, goes through with a sudden jar and very often loosens the articles that have already been arranged.

The various tools can be wired into position with fine snare wire when the tool is in position and the holes punched.

(Continued on page 49.)

Galvanizing—where the pails, tubs, etc., are dipped into the flux by the man with the black tongs, and thence pushed down under the division, and taken out by the man with the white tongs.

What Other Hardwaremen Do

HARDWARE FIRM SELLING TOWELS.

The George Taylor Hardware Co., Ltd., with stores at Cobalt, New Liskeard and Cochrane, Ont., have always been on the alert for new lines and have never been backward in putting in any new line which they thought would give service and prove a good seller. "Paper Towels" is the newest line they have added to their stock. In announcing the new line in a newspaper advertisement last Saturday, the firm said in part:

NEW, HANDY, PAPER TOWELS.

Did you ever use a Paper Towel?

No—well now's your chance to try them, for we have just got in a new line put up in rolls containing 150 towels each. This Paper Towel is heavier than the ordinary run and is therefore better because of its improved absorbing qualities. This line is absolutely free from all injurious chemicals and it is sure bound to give satisfaction.

In some places Paper Towels can be used much more advantageously than cloth towels and at a distinct saving in money. Take for instance factories or hotels where towels are used a great deal, the great problem is found to be in connection with sanitation and expense of keeping clean.

Our new Paper Towels solve all these problems.

And look at the remarkably low cost—a roll of 150 Towels for only 30c; a nickel plated towel holder for only 50c; or a white enamel holder and covering for $1.50.

CARRYING SURPLUS STOCK.

How to carry surplus stock so that it will be easily accessible, and not cause confusion to clerks who are unfamiliar with the building, is a problem which has come up for solution in many a hardware store where shelves in the store rapidly become crowded. Much thought was given to this subject when the new store was designed for the Cochrane Hardware Co., Sault Ste. Marie, Ont.

Hardware and Metal requests retail hardwaremen to send in copies of their newspaper advertisements, circulars, catalogues or other advertising matter which they may issue from time to time. Please address all matter to Hardware and Metal, 143-153 University Ave., Toronto.

The accompanying picture shows how well this difficulty was overcome, and hardware merchants who have a spacious upper floor at their disposal, will do well to profit by this. The picture shows one side of the second floor, fitted with a hundred feet of open shelving, containing surplus stock. It includes builders' hardware, ammunition, valves, etc., and the feature of it is that the goods are practically in the same shape and location as in the shelves on the ground floor. This allows of no confusion, and goods are not misplaced and lost. One man is responsible for the condition of these shelves. They are served with three traveling ladders.

View of shelving on second floor of Cochrane Hardware Co. store.

SELLS PHONOGRAPHS AND RECORDS.

A hardware firm in Zealandia, Sask., have a good side line in connection with their regular business, that has proved to be a valuable asset.

They handle a well known make of phonographs and records, and have sold a good many machines to the farmers in the community. During the winter months especially they find the business in this line exceptionally good. An ad in the local paper occasionally keeps them in touch with owners of machines, and through this medium they announce the arrival of new records. With every machine sold the purchaser requires anywhere from five to twenty records, and this is the "velvet" of the business. The machines are sold on terms similar to those of the agents in the larger cities and while the machines are sold at a good profit the real business is in the records. For these the farmers have to pay cash and from the number of machines that have been sold in this district the business in records that is bound to follow will mean a good showing of extra profit for the merchant which undoubtedly would have gone to the catalogue houses.

Some high priced machines have been sold and these will eventually prove to be the means of selling more. This is another instance of a hardware merchant who does not fight shy of new goods.

The same merchant also stocks a good line of auto accessories and repairs and gets good business from the local auto owners in this line. If some article not carried in stock is desired, the merchant makes it a point to get the article for his customer. In this way he secures business that the auto owner would send to the nearest city.

There is always room in the hardware store for good side lines, and many lines that have proved very profitable for the merchant have in recent years made their

Form used by Cabana Freres Ltee., Montreal.

way into the retail stores and become permanent lines instead of side lines.

SIMPLE METHOD OF KEEPING TRACK OF SHELF HARDWARE.

Cabana Freres, Ltee., 252 Laurier Ave., west, Montreal, and Esbourgeois et Cie., Inc., St. Hyacinthe, Que., have a system for keeping track of shelf hardware which is simple and efficient, and is applicable in any store where stock boxes are used. A record of every article in a drawer is carried on the side of the box. If there are more than five different articles, both sides are used.

A rubber stamp prints the following, leaving space for details to be filled in: Description, date of invoice, name of firm from whom article was bought, cost price including list, discount, and net, and selling price, including special price, per dozen, and price of one. A facsimile of this stamp is shown herewith. Instead of writing the name of the firm who supplied the article, a number is used.

The system has many advantages. Supposing the box contains rubber bumpers, and the traveler for another rubber company enters the store. He names his price, and the merchant can see in a minute who it was supplied them last time, price paid, how long they have been in stock, etc. Date of invoice will advise him how these goods are moving, and whether he should buy heavy or light.

If the merchant is making out a requisition for rubber bumpers, he has only to look at his stock box to find out what he paid for the last. When buying in small quantities, it often happens that the package has been destroyed by the time the line runs out, so that it is impossible to say what the last supply cost. If the box was badly sampled, the merchant may have forgotten what the box contained. With a full description stamped on the side of the box, it can be used for rubber bumpers say, and nothing else.

Esbourgeois et Cie., claim to have reduced the cost of their shelf goods about 20 per cent. by using this system. It is a well-known fact that some firms can give better value on some lines than their competitors; and vice versa. With a simple system like this, a merchant soon learns where he can buy best, not only from jobbers, but from manufacturers as well. There is a wide divergence in prices among manufacturers.

WHAT THE DISCOUNT RATES MEAN.

Hardware and Metal has on many occasions referred to the manner in which some merchants, without good reason, take advantage of full time on invoices, and thus impose heavy burdens upon their businesses. The merchant who takes full time on his bills usually works against a heavy disadvantage. A recent issue of The Credit Men's Journal refers to "What the Discounts Mean," and states as follows:

"The merchant who takes advantage of the full time on his invoice imposes a severe burden upon his business. The following examples show what that burden is:

"(1) One per cent in 10 days in a 30 day bill means 18 per cent. per annum. Example: Invoice $1,000, 30 days net, 1 per cent. for cash in 10 days. If the merchant pays in 10 days he receives $10 cash discount, which, in effect, is the interest the wholesale house pays him for the use of $1,000 for the 20 days unexpired time. This is at the rate of 18 per cent. per annum, for the interest on $1,000 for 20 days at 18 per cent. is $10.

"(2) Invoice $1,000, terms 60 days net, 2 per cent. for cash in 10 days. Discount $20, unexpired time 50 days, interest equivalent 14 4-10 per cent. per annum.

"(3) Invoice $1,000, terms 6 months net, 6 per cent. for cash in 30 days. Discount $60, unexpired time 5 months, interest equivalent 14-4-10 per cent. per annum.

"(4) Invoice $1,000, terms 4 months net, 4 per cent. for cash in 30 days. Discount $40, unexpired time 3 months, interest equivalent 16 per cent. per annum.

"(5) Invoice $1,000, terms 6 months net, 6 per cent. for cash in 60 days. Discount $60, unexpired time 4 months, interest equivalent 18 per cent. per annum.

"The above few examples will show what a heavy disadvantage the retailer works against when he takes full time on his bills. He could borrow money to discount his purchases and make 6 per cent. to 10 per cent. on the transaction besides keeping his business in hand better than he possibly can when he owes a large number of wholesale houses."

STEEL WORKS AT NEWCASTLE, N. S. W.

Of more than passing interest to the administrations of Canadian steel products plants is the following statement from the columns of the "Weekly Bulletin," Department of Trade and Commerce, Ottawa, relative to the establishment of a steel works of considerable magnitude at Newcastle, New South Wales, Australia:

After an expenditure of about $5,000,000, the company recently commenced operations, the blast furnace being now at work and the rest of the plant is rapidly approaching completion. Contracts have already been taken for the supply of large quantities of steel rails for the Transcontinental Railway and for the various State Railway Systems throughout the Commonwealth. The company has started operations at a singularly opportune time when oversea competition is minimized by the excessive freight rates now ruling. In no branch of production is it more imperative that a country should be independent of outside supplies than in iron and steel, and in the matter of large contracts for the railways and other public utilities, the company is bound to receive a preference in accordance with the established precedent of the country. When the works are completed, the plant will, in addition to steel rails, produce structural steel, angle iron bars, sheets, fencing wire and allied goods.

In South Australia, the company owns a most valuable mountain of iron stone of exceptional quality which is conveyed by steamer, some 1,100 miles, to the extensive plant erected beside the finest coal mines in the Southern Hemisphere.

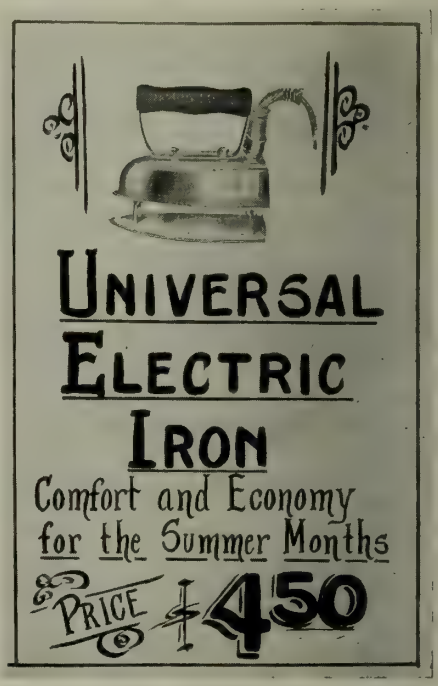
Show Cards You Can Make

Illustrations from Advertisements in Hardware and Metal Used in Making Show Cards —How the Card Acts as an Aid to Sales — Three Attractive Show Card Suggestions.

BY T. O. CRAWFORD.

IN every issue of Hardware and Metal you will find in the advertising pages a large number of attractively gotten-up advertisements. In many of the advertisements exceptionally attractive illustrations are used.

The illustration used in preparing the above advertisement was taken from the advertisement of the Stanley Rule and Level Co. on page 14 of last week's issue of Hardware and Metal.

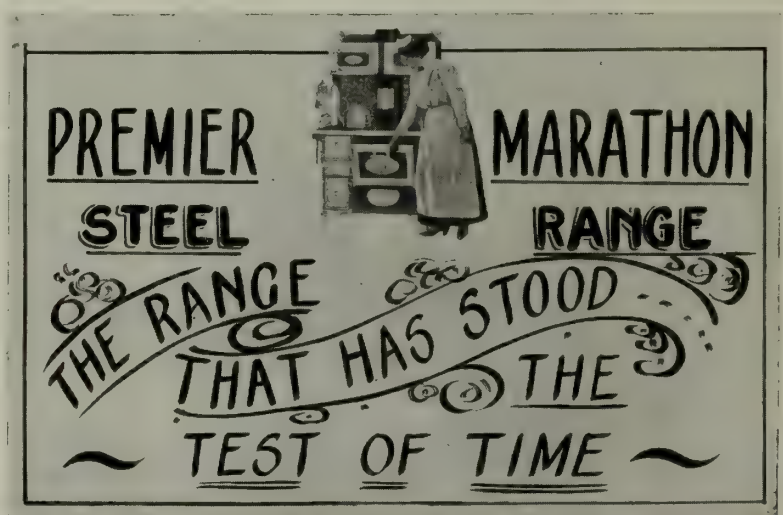


For some months past this department has been running in Hardware and Metal for the purpose of showing retail hardwaremen how they could at small expense produce useful show cards for use in window displays or the store interior. There are many hardwaremen and window trimmers who realize the value of attractive show cards in the windows and in the store, but prior to the introduction of this service many of them had found it hard to draw or secure suitable illustrations for show cards; and in some cases—in fact, many cases—it is the attractive illustration on a show card that at first compels attention.

By using the illustrations from Hardware and Metal advertising sections many card writers have solved a problem that bothered them for years. With these valuable helps, show card writing has to a great extent been simplified.

It often happens that a show card writer finds it difficult to think of phrases suitable for making show cards. When you are "up a tree" for ideas turn to Hardware and Metal's advertising pages and you will find plenty of material in the various advertisements. Some examples are given in this article.

Accompanying the article are three show cards. The illustrations used in making these show cards are taken from advertisements in the June 19 issue of Hardware and Metal. The cards shown are only three of many that could be made from the advertisements in last week's issue.



Examine for a moment the show card featuring the "Bailey Iron Plane." The illustration used on this card was taken from an advertisement on page 14 of last week's issue of this paper. The five words forming the reading matter on the card were taken from the first two lines of the advertisement. In this advertisement the card-writer found everything he needed—illustration and wording—to make an attractive card. The prices on the card tell the onlooker that the planes may be secured at various prices.

The illustration used in preparing the above show-card suggestion was taken from the advertisement of Landers, Frary & Clark on page 2 of last week's issue of Hardware and Metal.

The illustration on the card featuring the "Universal" iron was taken from page 2 of last week's issue of Hardware and Metal. The illustration was taken from the advertisement and pasted on a sheet of white cardboard. The lettering followed. This card makes an appeal to the housekeeper. All good housekeepers are interested, or can be interested, in anything that will effect economies and lighten household duties. On this card a price is quoted. Of course, it is not meant that the card writer should insert the same price as shown on the sugges-

(Con. on page 44.)

The illustration used in preparing the above show-card suggestion was taken from the advertisement of The Thos. Davidson Mfg. Co., Ltd., on page 27 of last week's issue of Hardware and Metal.

Practical Course for Sheet Metal Workers

Article No. 36 of Series

By CHARLES SEIVERS

THE problem shown in this issue, Fig. 1, is that of a flared article, square at the bottom and round at top, the top is shown in centre of plan. The elevation A B C D shows a side view, A E being the straight height, thus forming the true altitude of triangles to be formed on plan.

In the plan, A B D E outline one-half the plan, and as it will be observed each of the two sections are the same. Divide the half circle on the line A-E into a number of equal parts, viz. 8, 1 to 9 inclusive. From each division in the different quarter circles draw lines to the corners as shown from 1-2-3-4-5 to B, and 5-6-7-8-9 to D. These lines A-1, B-1, B-2. B-3, etc., form the basis of the triangles and the altitude of the triangles is taken from height of elevation as A-E.

To lay out pattern, draw a line as A-B, equal to A-B, on plan. With compasses take distance A 1 on plan and set off at right angles to altitude A E as shown by X A 1, this being the triangle on the line A 1 on plan. Measure the distance from X to 1, and with A on pattern as a centre, draw an arc; set base-line D 1 on base-line from altitude as shown by X B 1, and with X 1 as a radius and B on pattern as a centre, draw an arc cutting arc drawn from A, thus obtaining point 1. Next set off B 2 on base line from X B, and with X 2 as a radius and B on pattern as a centre draw an arc, with one of the divisions on half circle, as 1 2 or 2 3, as a radius, and point 1 on pattern as a centre draw an arc intersecting arc just drawn obtaining point 2.

The accompanying article is No. 36 of a course of practical problems for sheet metal workers prepared, especially for the readers of Hardware and Metal, by a practical mechanic who is constantly in touch with new problems which are arising in the sheet metal trades. These articles are a weekly feature in Hardware and Metal, Canada's only weekly hardware paper.

Proceed in same manner with points B 3, B 4, B 5. When the points B 5 are obtained, using B C on plan as a radius and B on pattern as a centre, draw an arc. And with C 5 on plan as a base and C X as height, obtaining X 5 as radius, with point 5 on pattern as a centre and X 5 as a radius draw an arc cutting one just drawn, obtaining point 5 C on pattern. A line drawn through points A B C, 5 4 3 2 1 will outline one-quarter of pattern, which can be used to mark off balance, or the above can be repeated once to give half the pattern as shown.

The article shown in Fig. 2 is a flaring article, square at base, round at top, but with one side vertical. The plan shows the top and bottom in their relative positions, as the two halves are the same, only the one half outlined by A B C D on plan need be developed. The method for doing this is the same as that described for Fig. 1, with the exception that the half pattern in this case must at least be completed. In developing it is always a good point to number and letter the different points to avoid confusion. The student must not forget that no allowance is shown for seams or locks.

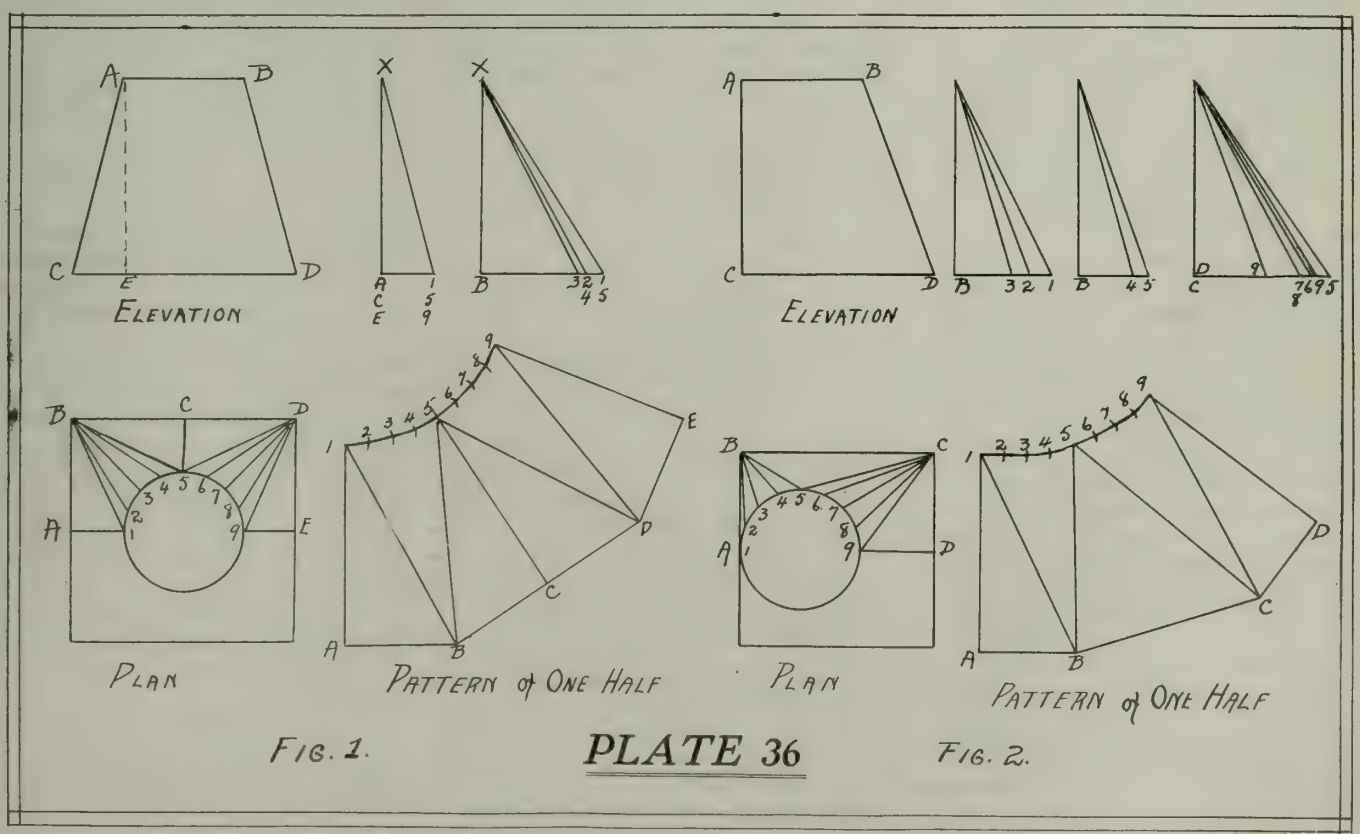


FIG. 1. PLATE 36 FIG. 2.

Events in the Trade

Readers are requested to send in, for publication on this page, news items of interest to the trade.

Fire Losses.

Scotsguard, Sask.—A. H. Jackson, hardware, has suffered loss by fire.

New Firms.

Sherbrooke, Que.—Frye & Cross, hardware; Herman E. Frye and Arthur H. Cross have registered.

Hardware Firm Registers.

Montreal, Que.—Bourget & Deschamps hardware, Joseph Deschamps and Joseph O. Bourget, have registered.

Business Changes.

Thorold, Ont.—Jas. Wilson has sold his grocery and hardware business to A. J. Wilson.

Melville, Sask.—R. Garvin & Sons, hardware and lumber, have sold their hardware business.

Wawanesa, Man.—L. R. Cotton, hardware, has been succeeded by Cotton & Loonen.

Toronto, Ont.—Moore Brothers have succeeded the Gillespie Hardware Co.

Calgary, Alta.—Western Foundry and Metal Co. has been succeeded by the Canadian Western Foundry and Supply Co.

Edmonton, Alta.—International Supply Co. has been succeeded by Canadian Western Foundry and Supply Co.

Ontario Incorporations.

The Invincible Machine Co. has been incorporated at Toronto, with a capital of $100,000, to carry on the business of machinists, mechanical engineers, toolmakers and iron and brass founders, at Toronto, Ont. Incorporators: James Young Murdoch, Esca Brooke Daykin, of Toronto, Ont.

The W. A. Swayze Co., capitalized at $40,000, head office Toronto, to manufacture and deal in automobile, wagon and carriage bodies and fittings, etc.

Dominion Incorporations.

The Universal Stove and Furnace Co., has been incorporated at Ottawa, with a capital of $500,000, to manufacture stoves and furnaces, etc., at Toronto, Ont. Incorporators: George Mortimer Kelley, John Delatre Falconbridge, of Toronto.

The Vacuum Street Cleaning Machine Co. has been incorporated at Ottawa, with a capital of $175,000, to manufacture street sweepers, air cleaners, drying apparatus, etc., at Windsor, Ont. Incorporators: William Thomas Blaney, of Windsor, Ont., and George Samuel Clarke, of Detroit, Mich.

London, Ont., for Next Year's Meeting.

St. John, N.B., June 23.—The Canadian Society of Domestic Sanitary and Heating Engineers to-day at the annual convention here, elected E. H. Russell, of London, Ont., president, and B. Noble, also of London, secretary-treasurer. P. Charette, of Montreal, was chosen vice-president for Quebec; Harry Hicks, of Toronto, for Ontario; J. Marr, of Calgary, for Alberta; A. J. Hammond, of Winnipeg, for Manitoba; and J. S. Anderson, of Vancouver, for British Columbia. London, Ont., was chosen for next year's meeting.

Brass Rods Wanted in Large Quantities.

Hardware and Metal has received a letter from an English firm of engineers and contractors who want to get in touch with any firm able to supply brass rods in quantities of ten tons or more weekly. The rods to be of varying sizes, classes B and C. The above amount will be wanted for twenty-five weeks or longer; terms, cash against documents. The firm would like quotations f.o.b. Montreal or New York, and also delivered London docks or other British port. Firms interested may secure further particulars by writing to the Editor, Hardware and Metal, Toronto, Canada.

WHAT OUR READERS SAY.

Montague, P.E.I.

MacLean Publishing Co., Ltd., Toronto, Ontario.

Gentlemen:—

Enclosed please find Bank Order for $2.00 to pay for our subscription to Hardware and Metal for one year.

We may say that we find this paper to be of inestimable value to us in our business and we rely on the quotations as they appear weekly to help us in our buying.

Yours truly,
POOLE & THOMPSON, LTD.,

Obituary.

Toronto, Ont.—The death occurred last week of A. R. Clarke, president A. R. Clarke & Co., glove manufacturers this city, as a result of injuries received and exposure, at the sinking of the Lusitania some weeks ago.

Brockville, Ont.—The death occurred here, suddenly, of Wm. H. Harrison, who conducted a stove and tinware business. Mr. Harrison was 63 years of age, and was mayor of the town for two years. He was a councillor, light and water commissioner, also a member of the Provincial License Board for this district. He was a veteran of the Fenian raid. He was a prominent Mason and an ex-officer of the Ontario Grand Lodge.

Montreal, Que.—The death occurred here recently of Edouard Charles Petit, of Armstrong & Petit, hardware, plumbers, etc.

Removed to Larger Premises.

The F. R. Murray Co., Ltd., Vancouver, commission merchants and wholesale distributors of hardware, have recently removed their office, warehouse and sample room to a new location at 117 Pender street west. The new location is very central and right in the heart of the wholesale and financial section of the city. In the new premises the firm will have nearly three times as much space as in the former premises. The business has only been established two and a half years but has grown to such an extent that the need of larger quarters has been felt for some time. F. R. Murray, managing director is a former resident of St. John, N.B. In the new premises the firm will have large windows for demonstrating purposes.

Personal.

Montreal, Que.—W. Drysdale, manufacturers' agent, of Montreal, is making a trip through the Maritime Provinces.

REGULATIONS GOVERNING SALES.

(Continued from page 29.)

to a penalty not exceeding one hundred dollars and costs or to imprisonment for three months, or to both fine and costs and imprisonment, who—

" (a) not having a permit in Form 76, has upon his person a pistol, sheath knife, bowie knife, dagger, stiletto, metal knuckles, skull cracker or other offensive weapon that may be concealed upon the person, or any air gun or any device or contrivance for muffling or stopping the sound of the report of any firearm, elsewhere than in his own dwelling house, shop, warehouse, counting house or premises; or,

" (b) sells or, without lawful excuse, gives or lends any such offensive weapon, device or contrivance to any one not being the holder of a permit; or,

" (c) in the case of a sale, neglects to keep a record of such sale, the date thereof, the name of the purchaser, such sufficient description of the weapon, device or contrivance sold as may be necessary to identify it, the date and place of issue of the permit and the name and office of the issuer of the permit, or neglects to send a duplicate of such record by registered mail to the person who issued such permit or neglects to endorse upon such permit the date and place of sale, the said description of the weapon, device or contrivance and the name of the vendor; or,

" (d) being authorized to issue a permit, issues it without keeping a duplicate thereof as a record, or having issued a permit, fails to keep any record received by him of sales of weapons, devices or contrivances to the holder thereof; or,

" (e) issues a permit without lawful authority.

"2. Upon sufficient cause being shown, any officer of the Royal North-West Mounted Police or commissioner of Dominion police or superintendent of provincial police or stipendiary or district magistrate, or police magistrate or acting police magistrate, or sheriff or chief constable of any city, incorporated town or district municipality may grant any applicant therefor, as to whose discretion and good character he is satisfied, a permit in Form 76, for such period not exceeding twelve months as he deems fit.

"3. Such permit, upon the trial of an offence, shall be prima facie evidence of its contents and of the signature and official character of the person by whom it purports to be granted.

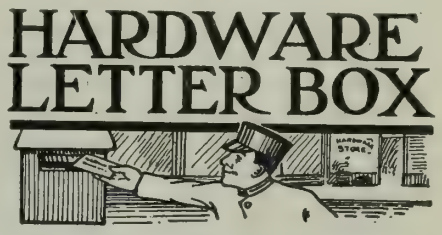
"4. Whenever the Governor in Council deems it expedient in the public interest he may, by proclamation, suspend the operation of any of the provisions of this section in the whole or any part of Canada, and for such period as he deems fit.

"5. Nothing in this section shall apply to any weapons, devices or contrivances authorized to be carried by any member of His Majesty's naval, military, or militia forces, or carried by any peace officer, or to any bona fide sale made by any manufacturer of or person trading wholesale in such weapons, devices or contrivances to any person bona fide dealing in such articles and having an established and fixed place of business.

"6. Every peace officer may search any person whom he has reason to believe and does believe has upon his person any weapon, device or contrivance contrary to the provisions of this section, and may seize any weapon, device or contrivance illegally in the possession of any person without a permit. Any such weapon, device or contrivance had or carried in violation of this section shall be forfeited to the Crown to be disposed of as the Attorney-General of the province in which such forfeiture takes place may direct."

Selling to Minors.

5. Section 119 is repealed, and the following is substituted therefor:—



"119. Every one is guilty of an offence and liable on summary conviction to a penalty not exceeding fifty dollars who sells any firearm or gives or sells any pistol or air-gun, or any ammunition therefor, to a minor under the age of sixteen years unless he establishes to the satisfaction of the justice before whom he is charged that he used reasonable diligence in endeavoring to ascertain the age of the minor before making such sale or gift, and that he had good reason to believe that such minor was not under the age of sixteen years."

6. Section 3 of chapter 9 of the statutes of 1907 is repealed and the following is enacted as section 151:—

"151. Every one who, by himself, his clerk, servant, agent or other person, violates any of the provisions of section 150 is guilty of an offence against this part and liable on summary conviction to a penalty of two hundred dollars and costs, and, in default of payment, to imprisonment for a term not exceeding three months; and, upon any subsequent conviction, to a penalty of three hundred dollars and costs, or to imprisonment for a term not exceeding six months, or to both, and, in default of payment of such penalty, to imprisonment or to further imprisonment for a term not exceeding three months; and imprisonment in each case shall be either with or without hard labor."

7. The following section is inserted immediately after section 169:—

"169a. Every one who falsely represents himself to be a constable or other peace officer, or who, not being a constable or other peace officer, makes use of any badge or article of uniform or equipment in such a manner as is likely to make persons believe that he is a constable or other peace officer, is liable upon summary conviction to a fine not exceeding one hundred dollars and costs, or to imprisonment for a term not exceeding three months, or to both such fine and such imprisonment."

Manufacturers of File Handles.

Sumner Co., Moncton, N.B.—Can you give us the names of firms making file handles?

Nicholson File Co., Port Hope, Ont.; McKinnon Dash Co., St. Catharines, Ont.; Lyster Wood Box Turning and Enamelling Co., Lyster, Que.; Waterloo Iron Works, Waterloo, Que.; E. B. Salyerds, Preston, Ont.; The Chapin Stephens Co., Pine Meadow, Conn.; Canada Spool & Bobbin Co., Ltd., Walkerton, Ont.—Editor.

Burnishers and Button Sticks.

Marshall's Hardware, Kingston, Ont.—Can you give us the names of anyone who could supply burnishers and button sticks?

Can any of our readers supply this information?—Ed.

Safety Razor Sharpening Machines.

H. W. Hobson, 1772 Davie St., Vancouver, B.C.—I will consider it a favor if you will let me know the names of any manufacturers of safety razor sharpening machines.

The Henderson Machine Co., Cincinnati, Ohio; Hyfield Mfg. Co., 48 Franklin street, New York, N.Y.—Ed.

Unmounted Grindstones.

Subscriber, Blind River, Ont.—Is there a grindstone quarry in Canada where I can buy a carload of unmounted grindstones?

W. R. Knowles Co., Ltd., Clifton, N. B.; Miramiche Quarry Co., Ltd., Quarryville, N.B.; Read Stone Co., Ltd., Sackville, N.B.—Ed.

An aeroplane engine runs at about 1500 r.p.m., and the tip of the propeller blade may have a speed of anything up to 500 m.p.h.

What Other Papers Say

Items of Interest From Other Papers—In Each Instance Credit is Given to the Paper From Which Item is Taken—Every Farm a Factory—More Rods Than Steel Rails—Money.

EVERY FARM A FACTORY.

From the Harvester World.

THE opportunity of the town lies in the country. The country can get along without the town, but no town ever has been or ever will be permanently prosperous where the land is poor. The town is built on farm profits; on what farmers produce in excess of their home needs. In fact, towns are liabilities, not assets—consumers, not legitimate producers. Towns are the natural evolution and outgrowth of necessity—places to store and distribute the world's surplus products through the channels of commerce. There is but one road to permanent city building—that road leads to the farm. Business is so sympathetic, so sensitive to crop production, that the forecast of a poor wheat or corn crop affects the markets of the world. When the harvest fields smile, towns wax fat, and factories increase the pay roll. Corn, wheat, and hay, beef, pork, and poultry—these are the soil builders, the home builders, the builders of great cities.

The old-fashioned chamber of commerce, with its cash bonuses and free factory sites, is rapidly passing away. Instead of grabbing business from each other, towns are beginning to look to the country, out into the fields of growing corn and wheat and hay. Here lies the opportunity—for the great city, strange as it may seem, is out in the country, hidden in the fertility of the soil. A successful hay campaign will bring factories to the town. Hay means beef and pork, which beckon the packing house and storage plant. More corn means cereal mills, glucose factories, starch factories. Flour mills locate in wheat-producing sections. Creameries follow the dairy cow, and the truck patch calls for the canning factory.

Let us have more chambers of agriculture and command fewer "commercial clubs." Let us create wealth from the opportunities at home, and not subtract it from other communities.

We must not forget that every farm is a factory, and that in every state there are thousands of these factories which need our best thought and effort to make them productive.

* * *

MORE WIRE RODS THAN STEEL RAILS.

From the Iron Age.

SOME years ago the suggestion was made in these columns of the probability that the production of wire rods in this country would eventually exceed the production of steel rails. This was based on the steadily growing consumptions of wire, causing an almost continuous annual increase in the output of wire rods, in comparison with the irregular increase in the consumption of rails. Occasionally in the interval the gap narrowed considerably between the output of rails and wire rods, but the production of rails until recently was too great for the output of wire rods to overtake it. The expected, however, happened in the past year.

The statistics issuel last week by the American Iron and Steel Institute covering the production of wire rods show that in 1914 the output was 2,431,714 gross tons against the output in the same year of 1,945,095 gross tons of all kinds of rails, as reported by the same authority in its statistical statement issued March 26, 1915. It would almost appear like boasting over a crippled contestant, however, for the wire-rod manufacturers to draw this comparison, as the production of rails last year was most unfavorably influenced by the unfortunate financial condition of railroad companies which prevented them from purchasing rails in their usual quantities. The output of rails in 1914 was about a million and a quarter tons below the average of the previous five years. The wire trade, it is true, was also not up to its standard in 1914, as the output in 1912 was about 220,000 tons greater. Nevertheless, it happened that the wire trade was not so seriously depressed as the rail trade. Consequently, although the precedent has at last been established of the annual production of wire rods exceeding that of rails, it remains to be seen whether this assumption of leadership is simply an accident or whether it can be maintained after conditions become normal in the whole steel trade.

* * *

MONEY.

From The Statist.

HOW will the resignation of Mr. Bryan affect the International Money Market? The question is of considerable importance, and it may be well, therefore, to discuss it without delay. Of course, the mere withdrawal of a single member, however eminent and however influential, from the Cabinet of a democratically governed country would not necessarily of itself have much bearing upon monetary affairs. It might be dictated by circumstances not in the least likely to alter the value of money. In this case, however, the resignation is expressly based upon the note which at the time was being prepared to send to the German Government. In other words, the resignation is dictated by matters which may involve war with a great military and naval power. Therefore, the step taken by Mr. Bryan cannot fail to have some influence upon money.

* * *

THE GOVERNMENT AND ANTIMONY STOCKS.

From the Ironmonger.

IN our opinion the Government has at least as good a case for action in regard to the supplies of antimony as it can make out for its decision to commandeer the stocks of spelter, and as the sources from which antimony is obtainable are more varied, it would probably be able to interfere more effectively than in the spelter supply. Most of the antimony used for munitions of war is smelted and refined in this country, although very little of the ore is produced here, and it would be absurd if, with the means at hand of effectually increasing the supplies of the metal and keeping prices at a reasonably low figure, the Government were to refrain from moving in the matter. The price of antimony has risen in practically the same proportion as that of spelter, but so far the Government has done nothing to check the upward run of prices.

* * *

There is quite a difference between earning money, making money and getting money. The first may be called honesty, the second speculation, and the third robbery.

New Hardware Goods

Offered Canadian Hardwaremen

THE NEW NEPONSET SHINGLE.

The asphalt shingle may now be said to have definitely taken its place among the standard roofing materials.

Bird & Son, of Hamilton, Ont., who for years have been making ready roofings of different sorts, were one of the first to come into the market with a shingle of this sort. Their first shingle was known as the Granitized Shingle.

Appearance of Neponset shingles where applied to roof.

This shingle has now been displaced by an improved shingle which Bird & Son are putting out, called the Neponset Shingle. The body of this new shingle is made from materials similar to that used in the Neponset roofings. Briefly this body is a felt thoroughly saturated with asphalt.

Bundle of Neponset shingles. Bundles contain one-quarter of a square.

In the case of the Neponset Shingles there is then added a coating of asphalt and into this is embedded a heavy surfacing of crushed slate, in its natural colors of red and green.

The Neponset Shingles are said by the makers to be of great durability and at the same time make a colored roofing which is most artistic in appearance. The fact that this color is obtained by the means of a crushed slate means that it will be a color that is practically permanent.

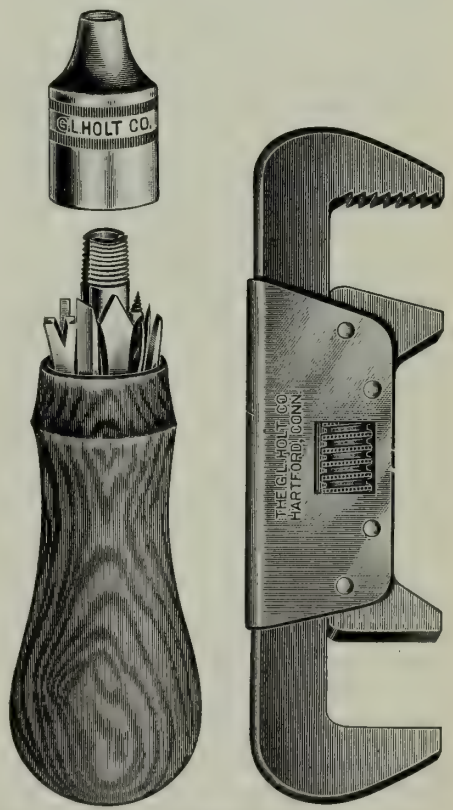
The makers also direct attention to another special point about this crushed slate surfacing, viz., the method by which it is embedded into the asphalt. This is done under tremendous pressure which again gives permanence to the color of the roofing and also to the durability.

Neponset Shingles are all uniform in size. This is said to be of great help in laying the shingles and means a big saving in time as there is none of the trimming and fitting which is necessary in the case of wooden shingles. Also on account of the flexibility of the shingle and its weight it will lie down firmly and fit a roof more closely than a rigid wooden shingle would fit.

The makers also direct attention to the fire resisting feature of this material. The slate surfacing, of course, is absolutely fireproof, but the shingle itself cannot be said to be fireproof. To all intents and purposes, however, the shingles are fireproof because the only way that a building would catch fire on the roof would be from flying sparks and embers and against these the Neponset Shingles are claimed to be impervious.

Further details may be secured by writing to the manufacturers, Bird & Son, Hamilton, Ont.

HOLT CO.'S NEW PRODUCTS.



The G. H. Holt Co., Hartford, Conn., offers to the Canadian hardware trade two new lines, here illustrated. The new double end adjustable wrench is a nut and pipe wrench in one, and is made in two sizes, 4-inch and 6-inch.

Regarding the new wrench the company states as follows:

"In general construction these wrenches are the same as the regular drop forged slide wrenches thousands of which have been on the market for the past thirty years. Being two tools in one they possess double value, yet the price is much less than two single wrenches. With one end for any kind of nuts and the other end for round bolts or pipe, they will hold and turn any shapes, square or round within their capacity. The wrenches are securely wrapped and packed in individual boxes."

Holt's patent magazine tool hafts and handles are also a recent production of the company. In describing this line the company states as follows:

"We make two sizes of Cocobola tool hafts, all inside tools properly hardened and finished; also two sizes of magazine tool handles, and a magazine screw driver, all of which have solid ends, with no wood cap to split, and they go together by means of Holt's Patent Construction making it impossible to pull the tools from the jaws or the jaws from the handle while in use."

Holt's patent magazine tool haft and new double-end adjustable wrench.

Descriptive matter describing the new products can be secured by writing to the manufacturers.

Junior Clerk's Page

SOME ANCIENT HISTORY.

From Simonds Saw News.

Pictures of workmen using saws are graven upon ancient Egyptian and Assyrian monuments, and their general introduction is credited by one historian to Daedalus. Their shape was apparently but little different from that of the modern saw. Ancient flit saws have been found on the site of Troy, and the Hebrews used saws for cutting both wood and stone. The Hebrews, Egyptians, Persians, and Romans occasionally executed prisoners with saws.

In the British Museum is a saw found in a tomb at Thebes in Egypt. The blade is seemingly brass, 10½ in. long and 1¼ in. wide at its greatest width. The teeth are uneven, and apparently were made by striking the edge of the blade against some dull instrument. Graven on an altar in Rome is a perfect picture of a bone-saw shaped like those used to-day.

As serviceable saws must be made of iron or steel, the saw is not as ancient an instrument as some others, and savages do not use it. Neither were the more civilized South American tribes familiar with saws, for they, too, lacked iron. Probably the idea of the saw was first suggested by the notched jawbone of some fish. In Homer's time the saw seems not to have been known to the Greeks, and probably they as well as other nations took the idea from the Egyptians. The ancients so improved the saw that it comes down to us in much the same shape that it has to-day.

TALKS WITH CLERKS.

A clerk in a Toronto hardware store in the course of a recent conversation, dwelt at great length upon his eminent qualifications as an all-round hardwareman, bragged of his salary, etc.

There was no limit to his self esteem, it went to feathering, sprouted and took to wing before his listeners' eyes. He was a good man and he knew it.

The last was not meant in a sarcastic sense. He was really competent, but his more than knowledge of that fact nullifies the benefit of the virtue. Evidently, his employer thinks likewise, for the young man, whilst holding forth at great length upon his value to the business and the fondness of his employers for him, said: "And, by George, you know, in spite of all I've done for the firm, I've never been raised voluntarily yet. I've had to fight like a wolf for every raise I got!"

Self Confidence or Swelled Head?

I was talking with a chap the other night who was going to work in a hardware store although he had never had any previous experience either in hardware nor in selling.

"Bet your life," he said, "So and So fixed it up for me, and if I can't go on the floor as a full fledged salesman they can go to blazes!"

"But," I ventured timorously, "you've had no experience; you must take a more humble job until you get on to the ropes?"

"Ropes, nothing! They can't show me anything. I've demonstrated my ability in other lines, and it won't be any trouble for me to learn their old hardware."

"But, other fellows——" I started to say.

"Oh, yes, other fellows, but they're different. They must expect to learn from the bottom up. But I can start in at the top. I'm different.

SHOW CARDS YOU CAN MAKE.

(Continued from page 38.)

tion. Prices vary according to locality, and the prevailing price where the card is to be used should be quoted.

The illustration on the card showing the Premier Marathon Range was taken from an advertisement on page 27 of last week's issue of Hardware and Metal. The card-writer has reproduced the heading of the advertisement as it appeared in that issue. On this card the price is not given. Some dealers believe that it is not a good plan to show the price on a stove in the show window. They claim that if the price is given, many customers not acquainted with the merits of the stove offered will not enter the store. On the other hand, if the price is not quoted, but the goods are shown up attractively, there is every likelihood of interested persons entering the store to inquire regarding the price. The salesman then has an opportunity to point out the good features of the stove offered, and if he cannot make a sale on the spot he can secure the prospect's name and follow up the latter by letter or a personal canvass. Other merchants claim that it is a good plan to quote the price. They argue that if a merchant openly quotes a price he practically tells the public that he has a good article at a certain price, and if he did not think it was worth the money he would not come out openly and quote the price. Many other arguments could be advanced for both sides, but the question of quoting prices on stove show cards is one that is largely up to the merchant, and is for him to decide.

The three cards here shown were made in a very short space of time and the cost was practically nil. Any hardware clerk can make good show cards if he makes use of Hardware and Metal's advertising pages in the manner suggested in this and former articles.

CATALOGUES AND BOOKLETS.

Monel Metal.

The International Nickel Company, 43 Exchange Place, New York, recently issued an attractive booklet descriptive of Monel metal and its uses. The booklet contains a great deal of interesting information regarding uses for which Monel metal has been found adaptable; resistance of Monel metal to oxidizing influences, resistance of Monel metal to corrosive influences, the retention of strength of Monel metal at high temperature, etc. Copies can be secured by writing to the above address.

Jewel Gas Stoves and Gas Appliances.

An attractively gotten up 80-page catalogue, featuring Jewel gas stoves and gas appliances, has been issued by The Burrow, Stewart & Milne Co., Ltd., Hamilton, Ont. The catalogue, which is nicely illustrated with half-tone illustrations, features, among a great many other products, gas ranges, gas heaters, hotel gas ranges, hot water, tea and coffee urns, charcoal broilers, hot plates, gas water heaters, artificial fuel, ovens, etc. All gas goods can be supplied for natural or artificial gas.

Weekly Market Reports

Statements From Buying Centres

The Markets at a Glance

The past week has been a quiet one in the trade and on account of cold weather the movement in seasonable goods has received a temporary set-back. The rising metal markets have received a sudden check during the week and spelter and lead have declined considerably. This was to be expected, following the warnings recently given. Despite the weakness exhibited in these metals there have been quite a number of price advances in hardware products. Among the lines affected are ammunition, hinges, tinned iron, copper and nickel wares, snow shovels and other lines. Aluminum has joined the price parade and is now quoted at almost double the price quoted two weeks ago. It is said that on aluminum most producers are sold up to the end of the year. There is a scarcity of brass rods, etc., and a number of large inquiries have arrived from English firms. In the lead market it is obvious that buyers became firmly convinced that manipulation was going on and dealers began to lose faith in the market. Linseed oil declined 6 cents per gallon at Toronto during the week and the market is very unsettled.

MONTREAL.

MONTREAL, June 24.—The reaction in the metal markets as affecting lead and spelter have been the spectacular features of a quiet week in the trade—spectacular because outside of the metals themselves the reaction has not been noticed in metal products which had not yet advanced to the level now reached in the decline. Thus, despite the weakness in metals generally, the feature of the week has been advances in a large number of miscellaneous lines. Among the articles affected are: solder, lead wool, lead pipe, Canadian plates, tinned iron, copper kettles, boilers, etc., ammunition and shot, hinges, galvanized nails, machine screws, hat and coat hooks, snow shovels, tapes, galvanized wire cloth, etc.

Business is reported as continuing as for some weeks with a fair country demand and quiet city business, while the building trade in general is almost at a standstill. Some dealers report an improvement in river front trade, while some substantial Government orders have been going. In general trade, volume of orders continues large in proportion to bulk.

The Metals.—The rising metal markets have been checked during the week, and a reaction in some departments followed. The opinion seems to have spread that the whole movement, and particularly the rise of lead, had been due to market manipulation on the part of special interests, presumably German. Spelter and lead have declined but the changes have not been sufficient to affect the markets for products of these metals. In the case of the former, the change seems due to sentiment rather than to the state of supplies, and, although the price is lower, manufacturers report that they cannot get sufficient supplies. For this reason, further advances in galvanized products are looked for. As regards lead, the reaction of raw material has not yet been sufficient to meet the rising prices of products; paint, pipe and sheets are firm with shot, cartridges and some other lines showing advances. Copper and tin are firm with the high prices continuing to affect materials into which they enter.

Tin.—The local market for tin is firm, while New York shows slight fluctuations which indicate a net decline for the week of about 1c. A rise in London early in the week failed to find sympathy in New York, and there was then a reaction on the other side. American consumers are said to be comfortably supplied for the immediate future with big shipments afloat in addition to the heavy purchases made during the past few weeks. London might have worked the market up while this buying movement was on, but the effort now is not likely to meet with success on this side of the water. The situation as regards futures is easier.

Spelter.—The price of spelter on the local market has been shaded down to 25c-26c. This decline of 4c is in sympathy with New York and does not indicate the situation here; New York quotes 17½c and 18c as compared with 26c two weeks ago. So far as manufacturers are concerned, they say that the lower prices are of no significance, as they indicate a change of sentiment and do not relieve conditions as regards shortage of supplies. For this reason still higher prices for galvanized products—ware, sheets, pipe, etc.—are predicted. New York reports very little interest on the part of buyers and no bids are recorded for anything but very small tonnages.

Lead.—There has been a marked reaction in lead following the sensational rise and the local quotation is off 8¾c and 9c to 7½c and 7¾c. There has been a market change in sentiment which seems to have been brought about by the fact that a study of statistics of production and consumption gave no basis upon which the high prices might be based. The conclusion was drawn that there was manipulation going on and dealers began to lose faith in the market. The result was that there was heavy selling on the part of second hands on a stop-loss basis, and producers were unable to check the movement before it reached considerably under their level. The situation in New York may be judged from the fact that whereas a week ago the Trust was charging $7, and second-hands were at $7.15, now the Trust is at $5.75, while second-hands are

MONTREAL QUOTATIONS.

Tin	47c-48c
Spelter	25c-26c
Copper	21c
Lead	7½c-7¾c
Antimony	40c
Solder, ½ x ½	28c-30c
Solder "strictly"	30c-32c
Aluminum, Ingot	40c lb.
Aluminum, Pattern	45c lb.
Wire Nails	$2.40 base
Cut Nails	$2.50 base
Pure Manila Rope	16c base
British Manila Rope	13½c base
African Hemp	13½c
Siscal	10½c
Lath Yarn	9¾c

For quotations on other hardware goods see weekly report and current quotations.

satisfied to get $5.40; instead of being 15c over the Trust they are 30c under. Many lead products show advances, the reaction not having been sufficient to meet manufacturers on the up grade.

Copper.—The situation in copper shows the local conditions to be firm but inactive; 21c is the prevailing quotation. New York for the week shows a fractional decline, which speaks well for the situation, for complete stagnation prevails there with practically no inquiries. It is believed that the "blue" sentiment in connection with spelter and lead is having its effect for consumption is good and the market is thought to be able to take care of itself around the present levels. However, a further advance in prices is regarded as unreasonable.

Antimony.—Unaffected by the decline in lead and spelter, antimony is holding its position well and there seems to be ground for the argument that the advances were based upon actual conditions of demand and supply and were not due to manipulation, as was the case with some of the other metals. Locally the price is nominally 40c, but there is practically nothing changing hands owing to the shortness of supplies.

Aluminum. — After getting into the price parade last week, aluminum has made further startling advances and the quotation is now 40c for ingot—compared with 23c two weeks ago—and pattern is 45c. The awakening of this metal seems to be due to its use to take the place of others which advanced to unusual price levels. However, a reaction would seem likely in view of the present state of the market for other metals.

Solder.—The high price of lead is keeping the solder market very strong and some further advances have been noted, although not of a radical character. The prevailing prices are 28c to 30c for half-and-half and 30c to 32c for strictly.

Sheet Zinc.—Prices for sheet zinc continue at abnormal levels and as yet there has been no material reaction. A nominal quotation of 36c is heard, but supplies are so short and sales so small and uncommon that it is difficult to find a wide basis.

Sheet Lead.—The reaction in lead has not been sufficient to affect the new high prices for sheet lead established a week ago, and the following still prevail:

Sheets, 2½-lb. square foot	$9.50
Sheets, 3-lb. square foot	9.25
Sheets, 3½-lb. square foot	9.00
Sheets, 4-6-lbs. square foot	8.75

Lead wool has advanced another 1c lb. to 10c.

Lead Pipe.—The rising lead market has brought the prices on lead pipe up to the high level. Prevailing quotations are 11¼c for lead pipe and 11¾c for lead waste pipe.

Canada Plates.—Price advances are noted for plain Canada plates, the following quotations now prevailing:—

Ordinary, 52 sheets	$3.25
All bright, 52 sheets	4.40

Tinned Iron.—A further increase has also been made in the price of tinned iron, the advance being 25c all round, and the following quotations now prevailing:

72 x 30 up to 24 gauge, case lots	$10.25
72 x 30 up to 26 gauge, case lots	10.75
20 x 28 x 94	13.00

Less case advance 25c.

Galvanized Sheets.—Despite the fall in the spelter market, the situation for galvanized sheets is very strong and further advances are being looked for. The following schedule which went into effect last week has just been confirmed by the Montreal association:

Queen's Head and Gorbals Best Best—	
16-20 gauge	$5.80
22-24	6.00
26	6.25
28	6.50
Fleur-de-Lis and Colborne Crown—	
16-20 gauge	$5.55
22-24 gauge	5.80
26	6.05
28	6.30
Apollo—	
14 gauge	$5.30
16	5.30
18-20	5.50
22-24	5.60
26	5.70
28	5.30
10¾ ozs.	5.50

Galvanized Ware.—Makers of galvanized ware report no relief as regards supplies of spelter, despite the reaction in the price. The demand is naturally very light in view of the high prices prevailing.

Copper Ware.—Important advances have been made in the prices of copper ware as predicted last week. The increases are due to the higher cost of raw materials. The following discounts now prevail:

Copper boilers, kettles, tea and coffee pots, 40 per cent.

Copper bitts, 17½ per cent.

Copper-bottom tea kettles and boilers, 25 per cent.

Range Boilers.—The following list prices now prevail for range boilers, being an advance of $1 all round:

30-gal. Standard, welded	$6.50
30-gal. Standard, riveted	6.75
30-gal., extra heavy	9.00

Ammunition.—The rising market for lead has had a marked effect on ammunition prices. The new Dominion quotations as adopted by the Montreal association, are as follows:

22 short and long black and long smokeless, 40 and 2½ per cent.

22 short smokeless, 50 and 2½ per cent.

Long rifle black and smokeless, 30 and 2½ per cent.

Centre fire pistol, 5 and 2½ per cent.

Centre fire sporting and military, 10 per cent. add list.

Primers, 2½ per cent.

Shot cartridges, discount same as ball.

Shells. — The advances as affecting loaded shot shells make Crown black powder 20 and 2 per cent., Sovereign bulk smokeless 25 and 2 per cent., Regal dense smokeless 25 and 2 per cent, Imperial 20 and 5 per cent., Canuck Smokeless, 25 and 2 per cent.

The following advances on American shells are in effect in some houses but not generally adopted as yet: Nitro Club, 20 and 5 per cent.; New Club, 20 and 5 per cent., and others proportionately.

Shot.—The advance in the price of shot is a very important one, the basis now being $11.25 net, as compared with $9 net. The special discounts, etc., are as before.

Hinges.—The prices of heavy Tee and strap hinges are to be advanced about 10 per cent. all round. Particulars as to the re-arrangement of the discounts are not yet available.

Roofing Nails.—The advance in roofing nails has been followed by a further increase. The basis for galvanized is now $7 as against $6.50 last week.

Machine Screws.—The price of machine screws has been advanced, the discount now being 30 per cent. as compared with 35 per cent. The line is one not extensively handled in the trade.

Hat and Coat Hooks.—There is an advance of about 10 per cent. on hat and coat hooks, being the result of higher prices for copper wire. The basis for 3-inch is now 60c.

Snow Shovels.—A second advance on snow shovels has been made in the past month. The prevailing quotations on wood are now as follows: Invictus, 30 per cent.; Diamond, 32½ per cent.

Tapes.—It is announced that Lufkin tapes will be advanced from 5 per cent. to 10 per cent. all round but as yet the new price lists have not been received.

Galvanized Wire Cloth.—The prices of galvanized wire cloth have been raised materially, the new basis being about 50 per cent. above the old: Four-mesh, $5.50; 6-mesh, $6.25 and 8-mesh, $7.

Builders' Hardware and Materials.—The demand for builders' hardware and materials continues very slow, particularly in the city. New lists on builders' hardware are still delayed owing to the unsettled state of the metal markets.

Iron and Steel.—The demand for iron and steel is confined to small lots, dealers preferring not to stock up with the

consumption abnormally small. Basis for bar iron $2, with 5c off for large lots.

Rope.—There is a fair demand for some lines of rope in connection with the waterfront trade. Following are the important changes covered in the recently announced price list:

Pure Manila basis	16c
British Manila Base	13½c
African hemp basis	13½c
Sisal basis	10½c
Cotton rope 3-16 and larger	22c

Stoves.—Dealers report that country demand for stoves is beginning to show some improvement. Conditions are not by any means good in this department, but comparatively better.

TORONTO.

TORONTO, June 24. — Continued cool weather has had a detrimental effect on business during the past week and summer lines, including hammocks, swings, refrigerators, ice cream freezers, etc., have not moved as well as they usually do at this season of the year. The hardware markets have settled somewhat, following the many changes which have taken place, and have been reported in Hardware and Metal during the past four weeks.

Metals.—The outstanding features in the metal markets this week are the reaction in lead and a further decline in spelter. As regards lead, the high level recorded last week was not warranted by conditions. The reaction, however, has influenced the tone of the market, although it is weak. The spelter market is weak and the situation not very much improved, notwithstanding the lower level. The copper and tin markets are firm with prices at the same level as last week. Aluminum has made a sharp advance and the latest quotations are abnormal. The antimony situation is unchanged and the market quiet. In the local market conditions are much the same as during the past few weeks. Business continues very active in certain metals for munitions, but the ordinary business is comparatively light.

Tin.—The market is dull but firm with an upward tendency. The London market is advancing but New York is quiet and stationary. Local quotations range from 44 to 48c per pound.

Copper.—The market is quiet but very firm in New York, and stronger in London. Producers are said to be well sold ahead and the market seems to be in a fairly sound condition. Copper is quoted locally at 22 to 23c per pound.

Spelter,—The market is weaker and declining and is unsettled. Consumers are staying out of the market and are showing no interest in any position. It is suggested in some quarters that the market has been manipulated but the falling off in demand may have something to do with the fall in prices. Spelter has declined 6c and quotations are nominal at 28 to 27c per pound.

Lead.—A sharp reaction has taken place in the lead market and the Trust has reduced the price to the basis of $5.75, New York. The market has obviously been manipulated, as the abnormally high price recorded last week was not warranted by conditions. The lead market is completely demoralized and the demand has fallen off considerably. Lead has declined 2½c and is quoted locally at 7½c per pound.

Antimony.—The market is quiet and featureless and the situation is unchanged. The antimony position is becoming increasingly serious, as there is a prospect of heavier demand with difficulty in obtaining supplies. Quotations are nominal at 40c per pound.

Aluminum.—The situation is critical as the demand is increasing rapidly and the production cannot apparently keep up with it. Quotations have advanced 3c during the week and local quotations range from 35c to 40c per pound. Most manufacturers are sold up to the end of the year.

Brass.—Great difficulty is being experienced in securing shipments of brass rods. Many inquiries from English firms have reached Canada.

Lead Pipe.—Following the three advances in the price of lead pipe which have taken place in as many weeks, the market this week is a little easier. No change in price has developed, but the market is very unsettled. Prices are shown in current market quotations.

Copper and Nickel Ware.—There has been a change in the discounts on copper ware owing to the advanced price in copper. Discounts are now quoted as follows:

Copper boilers, kettles, 40 per cent.
Copper tea and coffee pots, 40 per cent.
Copper bitts, 17½ per cent.
Foundry goods, hollow ware, 40 per cent.

Wire Clothes Lines. — Wire clothes lines have taken an upward trend, and an increase of 30c per 1,000 feet is reported. The following prices are quoted:

No. 7 wire, solid line No. 17, $5.35 per 1,000 ft.
No. 7 wire, solid line No. 18, $3.45 per 1,000 ft.
No. 7 wire, solid line No. 19, $3.15 per 1,000 ft.
No. 6 wire, solid line No. 17, $4.90 per 1,000 ft.
No. 6 wire, solid line No. 18, $3.55 per 1,000 ft.
No. 6 wire, solid line No. 19, $3.25 per 1,000 ft.
No. 6 strand No. 18, $3.05.
No. 6 strand, No. 19, $3.35.

F. O. B. Hamilton, Toronto, Montreal and London.

Brass Goods.—Owing to the increased cost of making brass, an advance in the price of all brass furnishings such as curtain rods, curtain rings, moulding hooks, brass tacks and all brass sundries is predicted. The advance is in the neighborhood of 10 per cent.

Ammunition.—All ammunition, both American and Canadian, has advanced 10 per cent. The advance is attributed to the prevailing high prices on brass, copper and lead. This advance goes into effect immediately. Shot shells have also advanced 10 per cent.

Rope.—The price on rope is unchanged and the market still firm. There is a fairly good demand for Manila rope, while it is reported that good business is coming in locally. Large quantities of Manila rope are being bought for the manufacture of handles for ammunition boxes for the Allies. Prices are shown in current market quotations.

Paris Green. — The market for Paris Green is very uncertain. This situation is accounted for by the difficulty with which the jobbers are receiving their supplies from the manufacturers. It is extremely likely that Paris Green will be very difficult to procure in the near future and an increase in price is very probable.

Building Materials.—The demand for builders' hardware is quiet at present. Builders' hardware liness remain steady at the advanced prices reported a few weeks ago. Nails are still quoted at $2.35 base.

Screws, Bolts, Etc. — No change has taken place in screws since the advances of last week in brass and bronze screws. Discounts are shown in current market quotations. In some quarters higher

TORONTO QUOTATIONS.

Tin	48c
Copper	22c
Spelter	24c
Lead	7½c
Antimony	40c
Aluminum Ingot	40c
Aluminum Pattern	29c lb.

Sisal Rope	10½c base

For quotations on other hardware lines see weekly report and current quotations.

prices are predicted for some lines of bolts.

LONDON.

LONDON, Ont., June 24.—This section of the country has not been affected by cool weather to such an extent as some other districts in Canada, and business is very good indeed. Summer lines are moving well. Prepared paints are in good demand. Linseed oil has taken a sudden drop in price, and is 6 cents per gallon lower than last week. The new prices on oil are as follows:—

Raw Linseed—		
1 to 2 barrels	73c	per gallon.
3 to 5 barrels	72c	„ „
6 to 9 barrels	71c	„ „
Boiled—		
1 to 2 barrels	76c	„ „
3 to 5 barrels	75c	„ „
6 to 9 barrels	74c	„ „

Turpentine remains unchanged, but is very firm at the following figures:—

2 to 4-barrel lots.... 64c per Imp. s.

	Per Imp. Gallon.
1-barrel lots	65c
2 to 4-barrel lots	64c
5-gallon lots	72c

Pure white lead in oil remains at $10.60 per 100 pounds in ton lots and $10.90 per 100 pounds in less than ton lots.

Advance in Wire.—A still further advance of 10c per 100 lbs. has taken place in fence wire, and quotations are now as follows:—

	Per 100 lbs.
Barb wire	$2.85
No. 9 galvanized wire..	2.60
No. 12 galvanized wire..	2.75
No. 13 galvanized wire ..	2.85
No. 9 coil sprg.	2.65

A still further advance of 25c per 1,000 feet has taken place in galvanized clothes line wire, and the new prices are as follows:—

No. 19.....	$3.15 per 1,000 ft.
No. 18.....	3.50 per 1,000 ft.

Poultry netting is now quoted here at 40 per cent. discount.

A new price has been issued on hinges and butts. Heavy tee and strap hinges from 4 in. to 8 in. are quoted at 45—5 per cent; from 10 in. to 14 in. are quoted at 40—10 per cent. Net prices are as follows:—

	Tee. Per doz. pr.	Strap. Doz. pr.
4 in.	$0.84	$1.00
5 in.	0.97	1.21
6 in.	1.00	1.32
8 in.	1.34	1.78
10 in.	2.27	3.24
12 in.	3.73	4.03
14 in.	4.00	4.59

The discount on light tee and strap hinges is now 70—10 per cent. Narrow steel riveted butts, No. 800 and 838, are now 70—10 per cent. Steel loose pen butts, Nos. 804-840, are now 70—10—5 per cent.

Galvanized Nails.—A new list of extras has been issued for galvanized nails as follows:—

Smaller than 1 inch—$4.75 per 100 lbs.

1 inch to 1¼ inch—$4.45 per 100 lbs.

1⅜ in.-2 in.—$4.25 per 100 lbs.

2¼ in. and larger—$4.05 per 100 lbs.

Other Changes.—A number of lines of American ammunition have advanced during the week. Shot is now quoted 25 per cent. off list, with $1.25 net per 100 lbs. added for chilled shot.

Rope has remained unchanged since the advance reported last week, and is now quoted as follows:—

Pure Manila	16c lb. basis.
British Manila	13½c lb. basis.
African Hemp	13½c lb. basis.
Sisal	10½c lb. basis.

WINNIPEG.

WINNIPEG, June 22.—A week of cold wet weather has had a discouraging effect on trade generally and has held back sales of purely summer goods, such as screen doors, windows, camping outfits, summer sporting goods, etc. For the rest there is nothing new in the situation. Crops are looking well but a little backward. Building trades are very quiet.

Barbed Wire Prices.—It has been difficult for the country hardware man to keep tab on the advances on all goods in which zinc spelter is a factor. New quotations on barb wire and other lines are in this issue of Hardware and Metal, but they must be looked upon as but nominal.

WINNIPEG QUOTATIONS.

Solder	29c-30c lb.
Linseed Oil, raw	95c gal.
Linseed Oil, boiled	98c gal.
Turpentine, in bbls.	80c
White Lead, ton	$11.50
Poultry Netting	50% off
Copper, plannished, per lb. ..	40c
Copper rivets, No. 7 ..	$41.50-$42.00
Rope, Pure Manila	17½c
Sheet Zinc	25c
Black Sheets, 10 and 12 gauge	$3.15
Apollo and Fleur de Lis	$6.20
Queen's Head	$6.25
Iron Pipe:	
Galvanized, 1 inch	$9.90
Black, 1 inch	$5.95
Lead Pipe:	
Coil	$11.25 less $11.75
Lead Waste	$11.25 per cwt.
Paris Green:	
1-lb. pkgs. (case lots)	27½

	Glass	Sgle.	Dble.
Up to 25 in.		$6.25	$9.00
Putty, 100 lb. drums			$3.25

One fact is well to keep in mind—all zinc products are high.

Lead Prices Up.—Lead is another commodity that is causing consternation in market circles. Pig lead is nominally at $10.75 and other lines equally dear. While lead is resting on last week's sharp advance, but prices on lead are not steady and are sure to advance.

Another line that is very strong is manila rope which this week is quoted at 17½ cents. Binder twine is expected to be high this year but supplies are ample.

The number of price changes in metals during the last month are significant of war times. The consumption of copper, lead and zinc is enormous, the output but little accelerated. These facts alone account for the constant advance in prices. Should an abundant American crop be harvested the resultant improvement in industrial conditions would surely bring about further advances in all metals and in paints and oils.

HIGHER PRICES.

Cleveland, O., June 24.—The Iron Trade Review to-day says: The general movement toward the adoption of somewhat higher prices for leading iron and steel products, especially shapes, plates and bars, continues. There are, however, some irregularities. Railroad buying for domestic use is more prominent and additional large orders for Russia and other foreign countries for locomotives and cars are expected.

The movement to advance the price of machine tools has become more general. The principal makers of milling machines have effected advances ranging from 10 to 15 per cent. Further buying of machine tools to manufacture munitions of war features the market in the East, although this buying is not on as large a scale as in the past.

A. N. P. A. ON FREE PUBLICITY EVIL.

The American Newspaper Publishers' Association at their recent annual meeting adopted the following resolution regarding the free publicity evil:—

"Whereas, newspapers have but two commodities for sale, namely, circulation and advertising space, and whereas press agents and some few advertising agents continue the practice of importuning newspapers to print certain advertising matter prepared in news style for the ostensible purpose of increasing the news of the day, while the real purpose of the copy is to secure the use of the news columns to convey inspired messages to the public, the American Newspaper Publishers' Association in convention assembled:

"Resolved, that the practice of seeking free news space for the furtherance

of business publicity is unethical and tends to lessen the friendly relations existing between the newspaper management and those who seek to secure publicity by such means, and be it further

"Resolved, that a copy of this resolution be forwarded to those who continue such practice."

WEEKLY PAINT MARKETS.

(Continued from page 52.)

firmer this week, an increase in price of one cent having taken place. Conditions do not indicate that any decline will be effected for some time to come as there is from 40 to 50 per cent. less turps on the market than there was at this time last year.

The market in Savannah is much firmer and is inclined to remain that way as the production has fallen off considerably. The following prices are being quoted in Toronto:

Single barrels	66c
2 to 4 barrels	65c
5-gallon lots	73c

White Lead.

No further change has taken place in white lead. The pig lead market is considerably weaker and very unsettled.

Glass.

Glass still remains unchanged. There are no immediate prospects of the revival of the glass business. Building conditions do not warrant any change in the glass quotations.

Whiting.

Whiting is still very scarce and remains firm.

There is a bigger demand for whiting and a further increase is said to be very probable owing to the high ocean freight rates.

Putty.

The curtailment of building operations has resulted in very little movement in glass, and this has made the putty market very dull. The prices are unchanged. Quotations on putty are as follows:

	Per 100 lbs.
Bulk, bbls., 800 lbs.	$2.50
Bulk, drums, 100 lbs.	2.70
Bulk, drums, 50 lbs.	2.75
Bulk, drums, 25 lbs.	2.80

SELLING TOOLS BY WINDOW DISPLAY.

(Continued from page 35.)

Some very handsome backgrounds can be made this way. It is a good cheap way to make a background and the wall board can always be used again as the holes from an automatic drill are very small and fill up very readily when the wall board is kalsomined.

Good tool displays will bring results the year round as there are no set seasons for showing tools and, if the boys in the hardware stores could just get on to the knack, or whatever you like to call it, of putting in good tool windows, the tool department would soon show an increase in sales. There is a certain amount of study needed in connection with window displays, but the chief factor is willingness. If you are willing, half the battle is over, but if you don't care, why leave it alone. Hand it to some other fellow. There are great chances for development along this line. Good window trimmers are scarce in the hardware line, and a window trimmer who can put up a good sales-making tool display is a valuable man to his employer.

To those who are beginning to make a study of hardware window trimming I would say, "Don't get down-hearted if you cannot see results coming in through the door as soon as you have finished your display." Results will follow.

Don't object to a little criticism. You will, no doubt, get lots of it, but always be on the lookout for ideas and suggestions.

THE SMALL ADVERTISER.

Smaller retail merchants sometimes become discouraged by the competition in newspaper space of larger stores. They imagine that people do not read the smaller notices.

Any newspaper man can give incidents out of his personal experience showing the contrary. A man with a very small space indeed often tells his story in such a pertinent, business-like, conversational way, that readers turn to his little ads just as a financial operator turns to the stock market.

It does not take a gift for saying smart and sharp things to make this kind of impression. It is simply the idea of writing as you talk, saying the things in advertising that you would say to a customer if you had him before the counter.

A merchant who desires to try advertising in a small way should have his notice put somewhere near the same place right along. He should not try to say too much in that space. Just a few words each time, about some particular thing, is most effective. — Jacksonville, Fla., Metropolis.

DOES NOT PAY.

It does not pay to contradict a customer flatly no matter how certain you are of being right. The customer may not mind being told that he is wrong but the chances are that he will resent it and get peevish. It's a way people have when they are in the wrong.

BIG CAMPAIGN FOR MEMBERS.

The Retail Merchants' Association, Toronto branch, is conducting a mammoth campaign for new members in that city. W. C. Miller, who has charge of the organization work, has the outside men in Toronto at the present time, and these are strenuously working to add on an additional thousand members within a month. The city has been divided up into districts, with captains appointed in each from the ranks of the present members, and every possible new member is being gone after. The campaign started last week and is now in full swing with every indication of it being successful.

CANADA AND SWITZERLAND.

Switzerland Has Not Been Isolated by Reason of the War.

Certain unfounded rumors having led a part of the Canadian public to erroneously believe that Switzerland was completely isolated in the centre of Europe between four powerful belligerent nations, and, since the entry of Italy in the war, had been shut off from any outlet on the sea, and was consequently prevented from exchanging products with Canada, Mr. Henri Martin, Consul-General of Switzerland for the Dominion, has just received from the Swiss Political Department at Berne the following cable:

"There is in Switzerland absolutely no interruption of traffic with foreign countries. All said traffic goes through French ports direct or via Great Britain. Route through Rotterdam could also be used, but sailing opportunities are scarcer from Holland."

All Canadian newspapers are respectfully requested by the Consulate-General of Switzerland in Montreal to kindly reprint this information. The Consul-General states also that, according to a recent agreement with the Swiss National Bank and the Bank of Montreal, all Canadian payments intended for Switzerland can be made in Canada through the channel of all offices of the Bank of Montreal in the Dominion.

Steel Wire List.

W. N. Brunton & Son, steel wire manufacturers, Musselburgh, Scotland, have issued a new steel wire list for steel wires, hardening and tempering. Copies will be mailed on request.

Paint Department

Inspection of White Paint

Inland Revenue Department Issues Report on Inspection of White Paint, Supplemental to Report on White Lead Published in Hardware and Metal, May 1.

IN the May 1 issue of Hardware and Metal, there appeared a report of the Inland Revenue Department on an inspection of white lead. A bulletin supplemental to the report on white lead has just been issued by the department, giving a report dealing with 116 samples of white paint purchased in Canada by Government inspectors during May and June of last year. The report of the chief analyst reads in part as follows:

"In the matter of white paint we have no standard requirement. This article is generally assumed to consist of white lead, ground in oil, and further diluted with linseed oil and turpentine, with or without so-called dryers, to the proper consistency for convenient application with a brush. White lead is frequently replaced by oxide or sulphide of zinc, a pigment which while it does not possess the covering power of white lead has some advantages over this. The chief advantage is that where sulphuretted hydrogen is present, the result is to blacken lead paints, while zinc is not affected in this way. We may, therefore, assume that the normal pigments, which may occur in white paint, that may be regarded as genuine, are either basic carbonate of lead (white lead), or oxide or sulphide of zinc, or a mixture of these.

Twenty-eight (28) samples of this collection are found to contain white lead as their principal pigment. Thirty samples (30) contain zinc oxide or sulphide, and nine (9) samples contain lead and zinc in admixture. If these be regarded as genuine, then sixty-seven (67) samples constituting fifty-eight per cent. (58%) of the collection are found to be genuine.

Barytes or sulphate of barium often called Heavy Spar is a much cheaper substance than either lead or zinc pigments. It is much used as a filler in white paint and cannot be regarded as an adulterant if the fact of its presence is declared on the label. Thirty-five (35) samples are found to consist chiefly of barytes so far as the pigment is concerned. Fourteen (14) others contain large amounts of barytes in admixture with more or less lead or zinc. All these samples may be regarded as questionable since the presence of the cheaper articles is not declared on the label, nor indicated in any way to the purchaser.

The following statement recapitulates what I have said:—

	Samples.
Pigment essentially white lead....	28
Pigment essentially oxide or sulphide of zinc	30
Pigment mixtures of lead and zinc	9
Pigment lead and zinc with barytes	14
Pigment chiefly barytes	35
Total	116

Inasmuch as we have no legal standard for white paint I cannot ascribe adulteration in a legal sense to any of these samples; but the work now put on record will be of use to the public in making known the character of white paint as offered in the Canadian market."

ADVANCING RETAIL PAINT PRICES

IN the April 17 issue of Hardware and Metal, an announcement of an advance in the price of ready mixed paints appeared. Hardware and Metal's market reports had stated on several occasions that advances were bound to take place as a result of tariff changes and new conditions created by the war. It is well known that a great many orders were placed early on account of predicted high prices, and that dealers took advantage of the advance information handed out to them. Although many good stocks were put in, there was no overloading, for the majority of retailers realized that this is not a time for overstocking, and that even though higher prices have to be paid, it is in many cases better to buy in smaller quantities and often. This, of course, depends on conditions in each locality and the merchant himself must be the judge of which buying methods are most suitable for his particular business.

Although there may be a difference of opinion on buying problems there is little or no difference in opinion when merchants are discussing selling problems that is, so far as selling prices are concerned. In the April 24 issue of Hardware and Metal it was stated that one retail hardwareman, well-known to readers of Hardware and Metal, had written, stating that he had advanced the prices on all lines of ready mixed paints and varnishes, and in order to facilitate sales, and make the buying public acquainted with the fact that paint has advanced in price, he approached the local newspaper publisher and suggested that he run a local reading notice regarding paint prices.

The merchant in question is a good advertiser in the local paper, and his request was granted. The merchant in writing to Hardware and Metal, said in part:—"I am having the enclosed inserted in our local paper this week. I think any town newspaper would insert same for an advertiser; to pave the way for the advanced prices we will have to ask for ready mixed paints at once. If it helps my competitor to get the advance with the minimum of trouble, I feel it will doubly help me."

The notice inserted in the newspaper read in part as follows:—

"During the past week the manufacturers of the higher grades of mixed paints and other paint products have announced a slight advance in the price of their goods. The increase cost of practically everything entering into the manufacture of paint has made this necessary in order to maintain a high standard of quality."

Last week's Hardware and Metal announced another advance in the price of ready mixed paints. The latter advance as well as the advance in April was anticipated in these columns. Are retailers advancing their prices? Paint to-day costs about five cents per quart more than it did two weeks ago. Are you as a retailer protecting your interests? Have you advanced your price to the consumer? You are certainly entitled to higher prices. The suggestion made by the retail hardware merchant could again be used to advantage. Every retail merchant should protect himself against losses by following the markets and advancing prices at the proper time.

Summer and Ingersolls

Hardware stores will find their Ingersoll watches selling best during the warm months.

Men will be laying aside their vests. Hundreds of thousands of them will also lay aside their jeweled watches and buy Ingersolls to slip in their coat pockets.

A Dollar Watch Eases the Mind

While away on vacations, on outings, or while indulging in Summer Sports, people want to be spared from worrying about a possible accident to their valuable watch. And they are willing to pay a dollar or two to be spared the worry. Just a suggestion will remind them that an Ingersoll is the watch for these summer uses.

The way to make that suggestion is to show up the watches in your window. A good window display of Ingersolls at this season, when they are so appropriate, will bring good substantial business, possibly more of it than anything else you have will bring at this time.

Robt. H. Ingersoll & Bro.

200 McGill Street **Montreal, P. Q.**

Look at every building —in this light

It has floors to varnish and walls to finish. Its owner is a logical customer. Then make sure of **satisfaction** to your customer and **profit** to yourself by handling Berry Brothers' products —for 57 years the universal choice of home owners, architects, builders and decorators everywhere.

We can supply anything your customers require—but the following products should always be carried by the trade —they are finishes for which there is a constant demand:

Liquid Granite—A floor varnish as lasting and durable as its name suggests.

Luxeberry White Enamel — Unequalled for white interior finishing. Whitest white—stays white.

Weekly Paint Markets

MONTREAL.

MONTREAL, June 24.—Following the upheaval in the paint markets last week, as the result of the advances in lead and zinc, there is comparative quiet this week, although in the miscellaneous lines the war continues as a factor for restlessness and quotations are constantly being altered or withdrawn altogether. A further increase in white lead has not been made and it is not likely that this course will have to be taken now, owing to the reaction in the pig lead market. However, this reaction has not yet been sufficient to bring the basis down below the new high level for mixed products and reductions there are not being considered. Red lead and zinc are being quoted from day to day and supplies are almost impossible to obtain in any quantity. Dry colors—especially reds and blues—are very unsettled and prices constantly going higher. Oil is somewhat easier and prices are declining with conditions very unsettled.

Business is reported as holding up fairly well, but the approach of the 1st of July brings the trade face to face with a summer which is generally forecast as likely to be unusually quiet. The spring store trade is now pretty much over and the demand for building purposes, which usually takes its place, is almost entirely lacking, while the industrial consumption is also light. Under these conditions the paint business seems bound to drag heavily for several months.

Linseed Oil.—The market is much weaker and very unsettled both as to prevailing prices and the outlook for the future. Dealers are not holding together and there is considerable spread in quotations, though not to the extent which prevailed some weeks ago. The trouble continues that light demand encourages dealers with stocks of cheap oil on hand to take a small profit and disregard the actual market values, and this cuts the margin of those buying from hand to mouth. There is no understanding in the trade as to prices and, therefore, quotations are very difficult to obtain and they are in many cases subject to slicing on the quiet where there is keen competition. The majority of paint houses give 78c and 81c as their basis but admit that there are lower prices, and refiners state that 76c and 79c or even less, would allow a fair margin. The following figures cover the range:

	Raw.		Boiled.	
1 to 2 bbls.	76	79	79	82
3 to 5 bbls.	75	78	78	81
6 to 9 bbls.	74	77	77	80

Gasoline and Benzine.—There is practically no change in the situation as affecting gasoline and benzine. Gasoline continues at 14½c in drums and 14c for tank wagon, while benzine is 14½c.

Turpentine.—The turpentine situation is more unsettled than ever, the range having widened by a couple of cents in a downward direction but some dealers claim that the top figure is being well maintained in certain quarters. The spread in prices is rather difficult to understand, but there is no arrangement between the dealers, and stocks on hand have an important bearing on the situation:

	Per gal.
½-barrel lots	63c-68c
1-barrel lots	60c-65c
2 to 4 barrel lots	59c-64c
5 to 10-barrel lots	58c-63c

White Lead.—Following the two advances in the market for white lead — amounting to $1.50—it was predicted in some quarters that there would be a further increase to overtake the rising market for pig lead. However, there has recently been a reaction in the latter market with the result that the situation is steady. This reaction has not yet been sufficient to weaken the new prices but further declines might be expected to do so. Basis is $10.45 with 30c added for less than ton lots.

Red Lead.—Supplies of red lead are very hard to obtain and supplies in the hands of large jobbers have been just about cleaned up by the paint trade. Prices are even firmer than last week and it is said that there is practically nothing under 10c and that this price is only for very limited amounts.

Zinc.—With zinc to-day costing something like 30c and supplies very short, the market is much unsettled and prices are only given on request and subject to daily change. Some houses are charging their regular customers around 17c and 18c and from this figure there are quotations as high as 40c and 50c according to the nature of the purchase and the conditions under which it is made.

Colors.—The situation in colors continues very unsettled with practically all bright reds and Prussian and Chinese blues withdrawn from the regular lists and quotations steadily advancing. There appears to be little prospect of any adequate measure of relief for an indefinite period.

Glass and Putty.—The glass situation is very firm and it is stated on good authority that there will be an advance in the near future. A meeting is being held this week in connection with this matter and the increase may then be decided upon. Putty is firm but demand small.

Paris Green.—Supplies of Paris Green are running very low and prices are being advanced. Canada Paint Co. announces that there is only pound packages and tins remaining of their stock and prices of packages are now quoted at 26¼c, and tins are ¼c above, or 27½c. All round advances are expected to be made in the near future. Shortage of certain raw materials and higher prices are given as the cause.

TORONTO.

TORONTO, June 24.—The chief sensation in paint circles at Toronto this week is the drop of 6c per gallon in the price of linseed oil. It has been claimed recently that some firms have been trying to keep the price of oil at a high level although conditions did not warrant such action. There is very little business passing. Many retailers booked oil early in the year when prices were very low, and some jobbers still have stocks of oil which were purchased at very low prices. For some time past there has been considerable price-cutting.

The following prices are now being quoted at Toronto by the majority of firms although it may be expected that in some quarters even lower prices will be offered:

	Raw.	Boiled.
Single barrels	73	76
3 to 5 barrels	72	75
6 to 9 barrels	70	73

10 barrels and over, open.

Turpentine.

The market for turpentine is a little

(Continued on page 49.)

RIPENED JUDGMENT

Nothing can ever take the place of experience.

A houseowner, after a lifetime of looking after his properties, holds up

Brandram's B.B. Genuine White Lead

as the best in the world. It would be difficult to make a successful appeal against his decision.

When you come to consider that six or seven generations before him have endorsed

Brandram's B.B. Genuine White Lead

the difficulty of controverting such a powerful testimony is increased seven fold.

There is no argument needed to secure a judgment in favor of this White Lead. The case has been ably stated by satisfied users throughout the past century.

BRANDRAM-HENDERSON LIMITED

Keep Posted

on the Development and Progress of Canadian Affairs

MacLean's — *a Made-in-Canada Magazine* — for keeping its readers posted on the progress and development of things Canadian.

You will be interested in the series by the inimitable *Gadsby*. There is only one H. F. Gadsby—witty and discerning political writer, master of josh and jolt, coiner of epigrams and greatest of paraphrasers — and Gadsby is giving his very best work to *MacLean's Magazine* in a series of sketches of prominent Canadians.

Other writers known to you contributing are: Alan Sullivan—master of prose; L. M. Montgomery, author of "Anne of Green Gables," "Anne of Avonlea," etc.; Dr. Orison Swett Marden, W. A. Craick, Madge McBeth, Margaret Bell and Britton B. Cooke.

20 cents a copy. $2.00 a Year.

Stephens

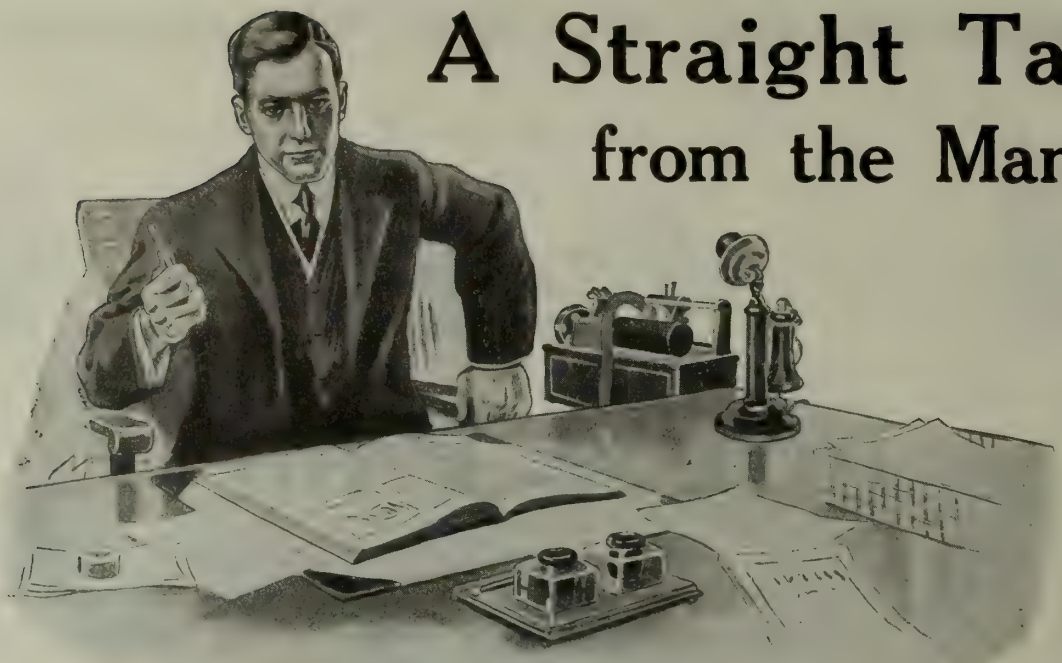
HOUSE PAINT

Stephens House Paint is made by experts for the use of both the Painter and Consumer.

The professional painter, as well as the amateur, is a steady user of "Stephens House Paint" because it saves him time and money, and always gives satisfaction. Stephens House Paint has wonderful weather-resisting qualities and no superior as a surface coverer.

If not already represented in your town we will be glad to explain our exclusive agency proposition. Write us about it.

G. F. STEPHENS & COMPANY, LIMITED



PAINT AND VARNISH MAKERS

WINNIPEG and CALGARY

A Straight Talk from the Manager

A Tip to Hardware Clerks

DOWN in Eastern Ontario there is a certain hardwareman* who has worked up a big business and employs a large staff of clerks.

This merchant realizes that nothing annoys a customer so much, as to be waited upon by a clerk who does not know his business. And so he subscribes for a copy of Hardware and Metal for each of his clerks, and he watches them closely to see what use they make of the paper.

In this store the promotions go to those clerks who study Hardware and Metal and thus show their zeal for learning the hardware business. On the other hand, clerks who display no interest in Hardware and Metal are classed as undesirables and are slated for early dismissal.

J. G. L.

*Name on request.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance):—2c per word first insertion, 1c. per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

grow and sell **SEEDS OF ALL KINDS** for Traders. Write to the **actual WHOLESALE growers** for rock-bottom prices and illustrated catalogue. Buy well ahead to secure **LOWEST PRICES.** Write **TO-DAY.**

DELTA FILES

cut deeper, faster and last longer

The savings that they effect in time through their rapid cutting, and the reduced file expense caused through their extraordinary durability, make users "strong after" them.

Delta Files establish a remarkable re-order business and will build up a big mill supply business in other lines through the connection they make and hold for you.

The "Delta" is the only line of files from 3 to 24 inches made absolutely of crucible steel. There is a shape and size for every requirement.

We will supply you with attractive store and window display signs, so that you can draw permanent attention to the fact that you carry Delta Files.

If you will send us a list of those you want circularized in your vicinity, **we will do the circularizing for you, mentioning you as our local distributor.**

And we help you in many other ways.

Write for full details re our agency proposition.

MADE IN CANADA

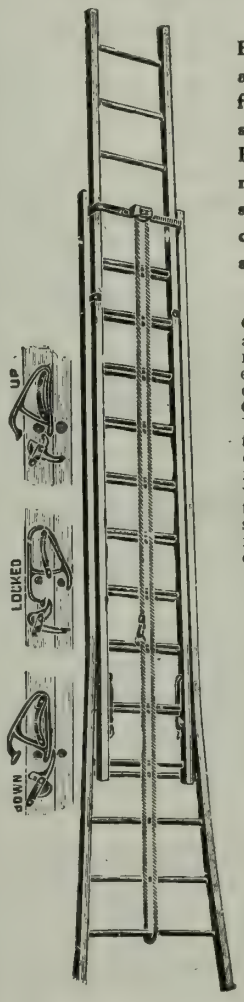
The Most Economical, Simplest and Easiest Running Freezers on the Market

DANA Peerless Freezers

MANUFACTURED AND SOLD FOR OVER 40 YEARS IN U. S. A., AND MADE AND SOLD FOR TWO YEARS IN CANADA —FROM NO QUARTER HAS THERE BEEN A COMPLAINT FROM ANYBODY.

Freezes a gallon of cream in 3 minutes with the smallest consumption of ice possible.

When you sell a woman a "Dana" you invariably sell to her neighbors as well.



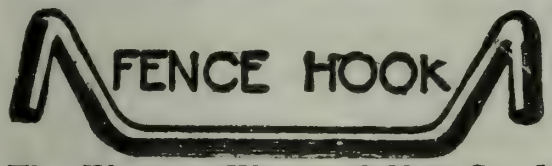
IT OFFERS YOU BIG BUSINESS—it's a proposition that you cannot afford to overlook.

Drop a line for particulars now.

The Wm. Cane & Sons Co., Ltd.
Manufacturers,
NEWMARKET, ONTARIO

Stratford Extension Ladders

Made from strictly first-class YELLOW PINE and Rock Elm rounds



Bored at an angle to conform to the spread of the Ladder, removing all strain and danger of springing.

Our method of attaching the ropes to all extension ladders means GREAT CONVENIENCE to the operator. A continuous rope is used which rests on top of both sections passing through an elevating pulley at the upper part of the lower section, then fastened to the lower round of the upper section by means of a spring snap. **The sections can be instantly separated by releasing this snap and either section used as a single ladder.**

THE EASY LINE TO SELL.

The Stratford Mfg. Co., Ltd.
STRATFORD, CANADA

GALVANIZED FENCE HOOK *For Fastening Wooden Pickets on Wire Fences*

WIRE NAILS, COILED SPRING, BARB and PLAIN FENCE WIRE, OILED and ANNEALED WIRE, CLOTHES LINE WIRE, STAPLES, etc.

The Western Wire and Nail Co., Limited, London, Ont.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

Big Profit and Satisfaction in Selling
"AYLMER" Force Pumps

They are certain to sell easily because it has several advantages over the ordinary style.
Has longer stroke, more power, and works easier.
While designed for hand use it can be readily converted into a Windmill Pump by the addition of a flat bar, which screws into the cross head at top.
It will be to your interest to write for full particulars now.

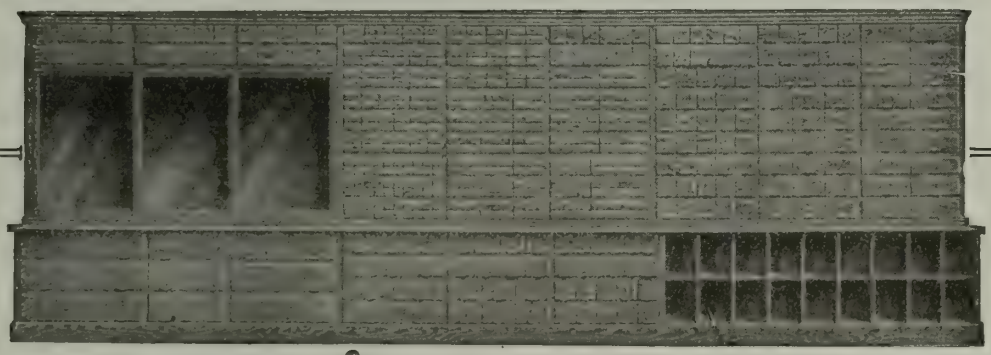
J. H. McCOMB LIMITED
MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

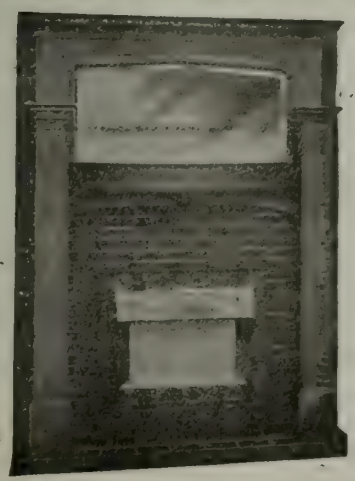


YOUR GUARANTEE

GIPE-HAZARD STORE SERVICE CO., LTD.
97 Ontario St., Toronto, Canada

INSTALL Gipe-Hazard Carriers — use them ten days—put them to every test—and if they do not give quicker, better and more satisfactory store service than any other system, they may be returned at our expense. Fair enough, is it not? Investigate our modern Electric Cable Cash Carrier and Pneumatic Dispatch Tubes.

Send for our new Catalogue F.



ATTRACTIVE, CONVENIENT, DURABLE, REASONABLE IN PRICE.

Our Patented Metal Shelf Boxes will improve the appearance of your store, and will enable you to give your customers quicker and more efficient service.

Advise us space you have available for shelf boxes and shelving, and we will sketch out plan and give you our best price for same.

Send for illustrated catalogue, it will interest you.

CAMERON AND CAMPBELL, TORONTO

Did You Ever Buy Fireplace Goods From US?

Thisis not merely a side-issue with us.

It is our Business and we are Specialists therein. We give you the best there is in Service and Our Motto is "QUALITY."

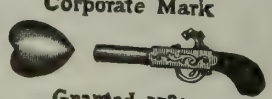
All kinds of **WOOD Planes**

THE CHAPIN-STEPHENS CO.
UNION FACTORY
PINE MEADOW, CONN., U.S.A.

PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.



You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

SUPREME CUTLERY

For Sale by Leading Wholesale Houses

MADE IN CANADA

Like the British Navy, there is no getting away from it. Always ready for instant use. On or off in a jiffy. Holds like grim death. So simple a child can fasten it. Keeps the hames always uniformly tight. Safe and Strong. A fast seller, with a big profit for the dealer.

All Jobbers should or do sell it. $2.25 per dozen.

D. C. ROSS & COMPANY
56 Colborne Street Toronto, Ontario
SALES AGENTS

Lovers of Things Canadian

will find a wealth of interesting information on national Canadian affairs and interesting facts about prominent Canadian characters, Canadian enterprise, and the value of our country's national resources, in each issue of

MacLean's Magazine

The editorial contents of July MacLean's include the following features:

An article on the Building Situation in Canada, showing that the present is a good time to build from an economic as well as a patriotic standpoint.

"Our Mountain Heritage" is the title of an article on the value of the Rocky Mountains from a national standpoint by Prof. Sissons. It is illustrated by some particularly fine views in the Rockies.

H. F. Gadsby contributes an article on William Findlay Maclean, of the Toronto World.

An article on Efficiency, outlining some of the steps which have been taken by Canadian firms to improve their methods and their output. This article was arranged for last month, but had to be held over.

"Masterfulness and Physical Vigor" is the title of Dr. Marden's article.

Biographical articles appear by E. J. Dennis, of Calgary, the Irrigation expert, and Mrs. Nellie McClung, of Edmonton, who played a big part in the downfall of the Roblin Government in Manitoba.

A short article on the greatest fishing section of Canada, the Temagami, also appears.

The fiction includes instalments of the two serials and short stories by Alan Sullivan, L. M. Montgomery, and a war story by Mrs. Cuthbert, who manages the Cuthbert tours in Europe. Mrs. Cuthbert is a new writer but a very promising one.

Get your July copy from your newsdealer.

20 Cents a Copy. **$2.00 a Year.**

Ross Catalogue of Parts

Every part which goes to make up any of the "Ross" Rifles, including the "Ross Cadet," is illustrated and priced in the "Ross" Catalogue of parts.

If you have not received one we will gladly mail a copy to you on request.

P.S.—The Ross Cadet .22 Calibre Rifle should sell specially well just now. A window display would help you to get your share of this trade.

Ross Rifle Company, Quebec, Que.

BUFFALO

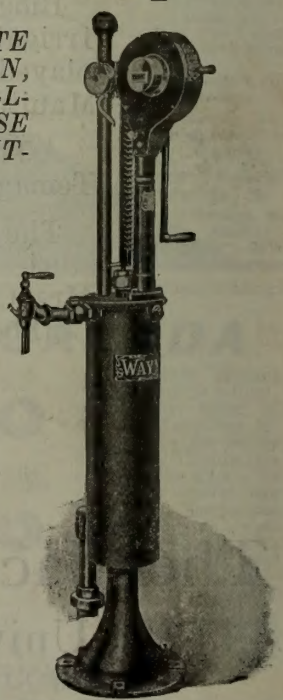
Is sold under an ABSOLUTE MONEY-BACK GUARANTEE to DEALERS ONLY.

Prairie City Oil Co., Limited
WINNIPEG, MAN.

Handle your Oils and Gasoline with the
Wayne Pump



IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness.

Throws a pint, quart, half-gallon or gallon, and measures exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.
